NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1908 9: Pres., Charles J. Brown, Rochester, N. Y.; Vice-Pres., C. M. Hobbs, Bridgeport, Ind.; Sec'y, Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y. The 34th annual convention will be held at Rochester, June 9 to 11, 1909.

OWING to cold weather, it was decided to postpone the meeting of the American Peony Society at the Cottage Gardens, Queens, N. Y., to June 11 and 12.

IRVING ROUSE, of Rochester, chairman of the committee on tariff of the American Association of Nurserymen, spent several days at Washington last week.

C. W. WARD, president of the American Peony Society, is in Michigan, and will not be present at the meeting of the society at Queens at the end of this week. R. T. Brown, manager of the Cottage Gardens Co., will do the honors in Mr. Ward's absence. Mr. Ward has been in ill health for the last seven months, but is now pulling up.

THE ROCHESTER CONVENTION.

A Splendid Meeting in Progress.

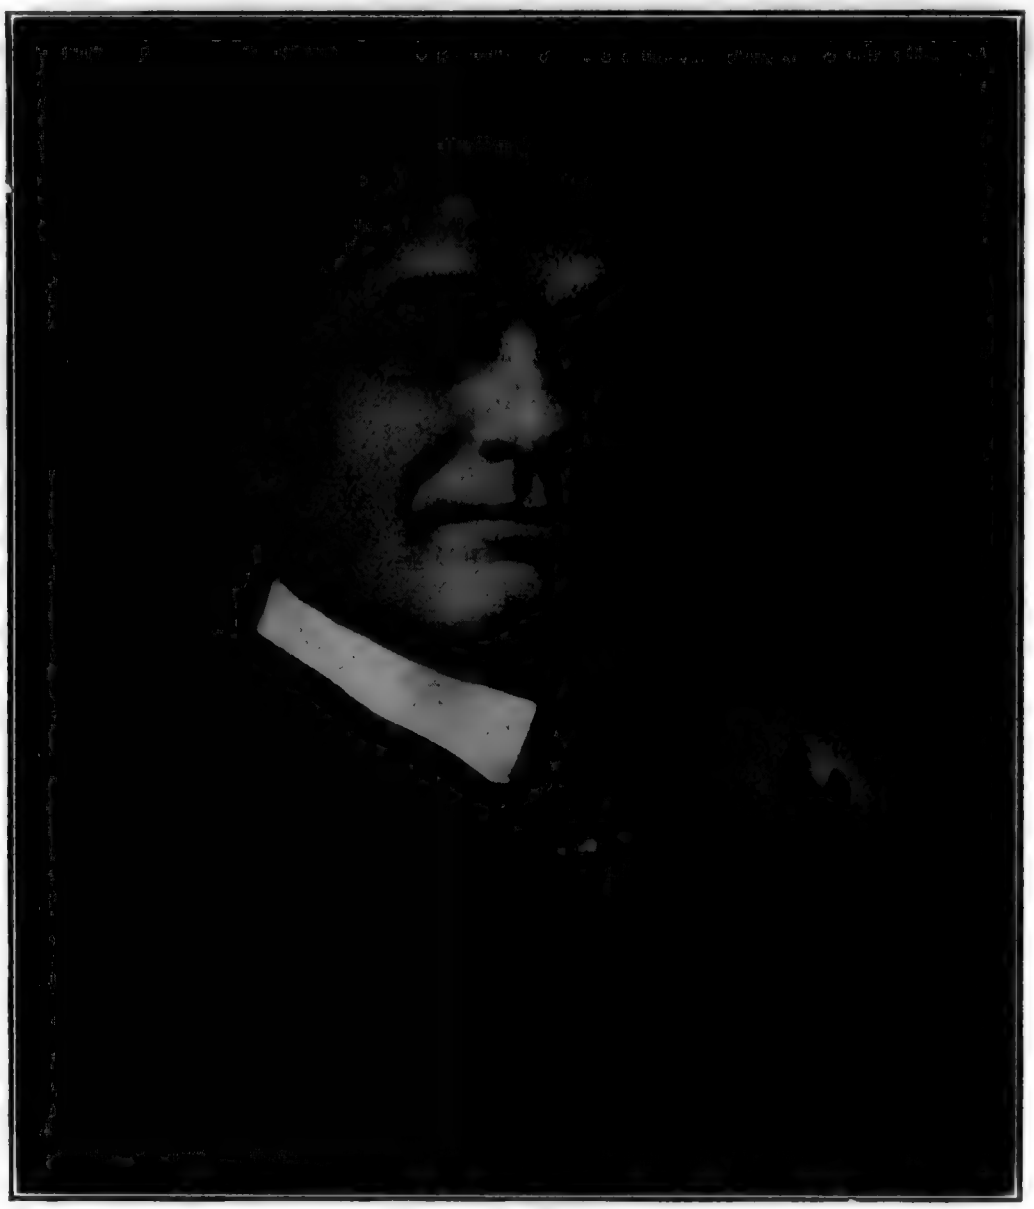
The thirty-fourth annual convention of the American Association of Nurserymen convened at the Hotel Seneca, Rochester, N. Y., Wednesday morning, June 9, with the largest attendance in years. Rochester is recognized as the leading nursery center of the United States and it is the Mecca to which members of the trade are wont to travel for inspiration. Elaborate preparations had been made for the reception of the national association, all the nurseries having been put into the best possible shape for the inspection of the large number of visitors. The program was so arranged that morning sessions only would be held, giving the afternoons to the inspection of the nurseries and to the incidental hospitalities.

The initial business session was called to order with exemplary promptness and an address of welcome delivered by Hon. H. H. Edgerton, mayor of Rochester. The city has recently achieved some reputation as a convention center and the mayor is in good practice for such a duty as he was called upon to perform in this instance. George S. Josselyn, of Fredonia, responded in, it need hardly be said, a humorous vein, and this time in poetry.

President Charles J. Brown said in advance of the meeting that it was his intention to make a record for brevity in the matter of the president's address, and prepared no set paper. The report of Secretary George C. Seager was also the briefest of documents. It merely set forth the financial transactions of his office, as follows:

Secretary's Report.

RECEIPTS.



June 6, 1908, to June 7, 1909.

Membership fees	$2,035.00
Advertising in Badge Book	722.00

	Irving Rouse, expense to Washington tariff committee	40.00
June 7,	Cash to balance	3,853.79
Total		$5,737.22

Tariff Committee's Report.

Irving Rouse, chairman of the committee on tariff, reported that the following rates of duty on nursery stock are practically agreed upon: Stocks, cuttings or seedlings of Myrobolan plum, Mahaleb or Mazzard cherry, Manetti, multiflora and Briar rose three years old or less, $1 per thousand plants; stocks, cuttings or seedlings of pear, apple, quince, St. Julian plum, evergreen seedlings, three years old or less, $2 per thousand plants; rose plants, budded, grafted or grown on their own roots, 4 cents each; stocks, cuttings and seedlings of all fruits and ornamental trees, deciduous and evergreen shrubs and vines, and all trees, shrubs, plants and vines commonly known as nursery or greenhouse stock, not specially provided for in this section, twenty-five per cent ad valorem.

F. H. Stannard, Ottawa, Kan., chairman of the transportation committee, re-

George C. Seager.
(Secretary American Association of Nurserymen.)

ported having secured the striking out of the release clause on nursery stock.

Papers Read.

At the initial session J. H. Dayton, of Storrs & Harrison Co., Painesville, O., read a spirited paper, urging nurserymen to coöperate in keeping up prices.

T. B. Wilson, of Halls Corners, N. Y., read a paper entitled "What the Orchardist Expects from the Nurseryman." He mentioned as among the difficulties the substitution of stock and the furnishing of inferior stock.

Prof. William Alwood, of Charlottesville, Va., spoke on the by-products of fruits, describing the work of the Department of Agriculture in studying the quality of fruit with reference to the sugar and acid contents.

Samuel C. Moon, of Morrisville, Pa., read a paper entitled "Evergreen Conifers." "The aim of this paper," he said, "shall be to encourage a more general planting of evergreens about rural and suburban homes and an enlargement of the number of species used for this purpose. I have no new varieties to exploit and no new discoveries to advance, but simply wish to reiterate and emphasize the statement that the rural homes of our country need more evergreen trees about them." After referring to the limited number of species planted in years gone by, he continued: "There is a large field for missionary service on the part of nurserymen who employ traveling salesmen in exerting themselves to push the sale of such trees and benefit mankind and our country thereby. I am not now arguing for the improvement of the lawns and large estates of wealthy landowners. Landscape designers and engineers take care of these, and are probably doing their work fairly well. But the multitude of country home owners, who are neither very wealthy nor very poor, who do not consult landscape gardeners and who have not had their attention called to some of their own needs nor learned to appreciate them, require the sympathy, encouragement and assistance of the nurserymen. Every nurseryman who raises ornamental trees for sale should have himself, or else have in his employ one who has, some knowledge about the simple arrangement and planting of home grounds, and it should be his duty and his pleasure to freely assist his neighbors and patrons with suggestions in such lines, as occasion is presented." Mr. Moon went on to state that among the conifers to be recommended for ordinary planting, experience led him to include at least fifty species, and he proceeded briefly to mention their individual merits.

Other Addresses.

The program for Thursday called for the election of officers and the selection of next place of meeting, with a number of routine reports of standing committees, and the following papers:

"Our Department's Work," by R. A. Pearson, Commissioner of Agriculture, Albany, N. Y.
"The Science Point of View," by Prof. L. H. Bailey, Cornell University.
"Commercial Peach Orchards," by L. A. Berckmans, Augusta, Ga.
"The Experiment Station and the Fruit Interests," by Dr. W. H. Jordan, New York Agricultural Station, Geneva, N. Y.
"Relations Between the Grower and Retail Nurserymen," by E. S. Osborne, Rochester, N. Y.

Thursday afternoon the protective associations hold their regular annual meetings.

Local Hospitalities.

The local hospitalities, which were on a more elaborate scale than ever before, began with a ride Wednesday afternoon through Rochester and the parks as guests of the western New York nurserymen.

For Thursday afternoon the visiting ladies were invited to a reception and luncheon at the Genesee Valley Club and Thursday evening the ladies were asked to a theater party at the Lyceum theater, adjoining the hotel. For the men a smoker was announced for Thursday evening at the Masonic Temple, with "something doing every minute." Friday was left with no set program in order to make it possible for the visitors to do business with one another and to inspect the nurseries.

The entertainment was in the hands of the following committees of western New York nurserymen:

Executive Committee—William Pitkin, J. M. Pitkin, Charles J. Brown, Charles J. Maloy, E. S. Osborne, Horace Hooker, William C. Barry, A. H. Salter, George C. Seager.
Committee on Finance—William C. Barry, Irving Rouse, Nelson Bogue, George C. Perkins, George S. Josselyn, Theodore J. Smith, John B. Morey, William J. Maloney.
Committee on Rides, Excursions and Lonesome Roads—Charles J. Maloy, M. B. Fox, B. F. Allen, F. E. Grover, Charles H. Hawks, R. D. Luetchford, A. L. Wood.
Committee on Entertainment of Ladies—Horace Hooker, R. G. Salter, J. F. Dale, E. S. Mayo, A. A. Mosher, Thomas F. Brown, C. H. Chase, Mrs. C. J. Brown, Mrs. G. C. Seager.
Committee on Smoker—E. S. Osborne, Charles L. Yates, O. G. Chase, J. M. Pitkin, O. E. Graham, Walter W. Wyman, Charles H. Vick.
Committee on Decorations—A. H. Salter, J. M. Charlton, George F. Crosman, J. M. Keller, Fred W. Vick, Fred Schlegel.
Press Committee—H. C. Goodwin, Prof. John Craig, Charles A. Green.

Trade Exhibits.

The number of trade exhibits in place at the opening of the convention was not as large as sometimes has been the case. Possibly the trade felt that exhibiting at Rochester would be in the nature of carrying coals to Newcastle. The exhibits in place Wednesday morning were as follows:

J. Frederick Lee, Rochester, advertising goods.

Clark Nursery Co., Rochester, peach seeds and raffia.

M. Brunswick & Co., Rochester, water-colored fruit pictures.

McHutchison & Co., New York city, raffia.

Chase Nursery Co., Huntsville, Ala., nursery supplies, such as pruning shears and tree counters.

Rochester Lithographing Co., Rochester, advertising lithographs.

Dayton Fruit Tree Label Co., Dayton, O., tree labels.

McFarland Organizations, Harrisburg, auto-chromes and colored slides.

Vredenburg & Co., Rochester, lithographs and advertising specialties.

Paul C. Koeber Co., photo gelatine color process.

Stecher Lithographing Co., Rochester, fruit plates and other lithographs.

The Macmillan Co., New York city, the Cyclopedia of American Agriculture by L. H. Bailey.

Vincennes Nurseries, Vincennes, Ind., one and two-year-old cherry trees.

P. J. Berckmans Co., Atlanta, Ga., Aucuba Japonica, Perfection currant, Biota aurea nana and Azalea Indica.

J. W. McNara, Hydrangea arborescens sterilis.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1908-9: Pres. Charles J. Brown, Rochester, N. Y.; Vice-Pres., C. M. Hobbs, Bridgeport, Ind.; Sec'y, Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y. The 34th annual convention will be held at Rochester, June 9 to 11, 1909.

OWING to cold weather, it was decided to postpone the meeting of the American Peony Society at the Cottage Gardens, Queens, N. Y., to June 11 and 12.

IRVING ROUSE, of Rochester, chairman of the committee on tariff of the American Association of Nurserymen, spent several days at Washington last week.

C. W. WARD, president of the American Peony Society, is in Michigan, and will not be present at the meeting of the society at Queens at the end of this week. R. T. Brown, manager of the Cottage Gardens Co., will do the honors in Mr. Ward's absence. Mr. Ward has been in ill health for the last seven months, but is now pulling up.

THE ROCHESTER CONVENTION.

A Splendid Meeting in Progress.

The thirty fourth annual convention of the American Association of Nurserymen convened at the Hotel Seneca, Rochester, N. Y., Wednesday morning, June 9, with the largest attendance in years. Rochester is recognized as the leading nursery center of the United States and it is the Mecca to which members of the trade are wont to travel for inspiration. Elaborate preparations had been made for the reception of the national association, all the nurseries having been put into the best possible shape for the inspection of the large number of visitors. The program was so arranged that morning sessions only would be held, giving the afternoons to the inspection of the nurseries and to the incidental hospitalities.

The initial business session was called to order with exemplary promptness and an address of welcome delivered by Hon. H. H. Edgerton, mayor of Rochester. The city has recently achieved some reputation as a convention center and the mayor is in good practice for such a duty as he was called upon to perform in this instance. George S. Josselyn, of Fredonia, responded in, it need hardly be said, a humorous vein, and this time in poetry.

President Charles J. Brown said in advance of the meeting that it was his intention to make a record for brevity in the matter of the president's address, and prepared no set paper. The report of Secretary George C. Seager was also the briefest of documents. It merely set forth the financial transactions of his office, as follows:

Secretary's Report.

RECEIPTS

[illegible]	[illegible]
[illegible]	[illegible]
[illegible]	25 50
[illegible]	2

Tariff Committee's Report.

Irving Rouse, chairman of the committee on tariff, reported that the following rates of duty on nursery stock are practically agreed upon: Stocks, cuttings, seedlings of Myrobolan plum, Mahaleb, Mazzard cherry, Manetti, multiflora Briar rose three years old or less, $1 per thousand plants; stocks, cuttings or seedlings of pear, apple, quince, St. Julien plum, evergreen seedlings, three years old or less, $2 per thousand plants, 4 cents each plants, budded, grafted or grown on their own roots, 4 cents each, stocks, cuttings and seedlings of all fruits and ornamental trees, deciduous and evergreen shrubs and vines, and all trees, shrubs, plants and vines commonly known as nursery or greenhouse stock, not specially provided for in this section, twenty five per cent ad valorem.

E. H. Stannard, Ottawa, Kan., chairman of the transportation committee,

George C. Seager.
(Secretary American Association of Nurserymen.)

orted having secured the striking out f the release clause on nursery stock.

Papers Read.

At the initial session J. H. Dayton, of storrs & Harrison Co., Painesville, O., read a spirited paper, urging nurserymen to cooperate in keeping up prices.

T. B. Wilson, of Halls Corners, N. Y., read a paper entitled "What the Orhardist Expects from the Nurseryman." He mentioned as among the difficulties he substitution of stock and the furnishng of inferior stock.

Prof. William Alwood, of Charlottesville, Va., spoke on the by-products of fruits, describing the work of the Department of Agriculture in studying the quality of fruit with reference to the ugar and acid contents.

Samuel C. Moon, of Morrisville, Pa., read a paper entitled "Evergreen Conifers." "The aim of this paper," he aid, "shall be to encourage a more general planting of evergreens about rural and suburban homes and an enlargement of the number of species used for this purpose. I have no new varieties to exploit and no new discoveries to advance, but simply wish to reiterate and mphasize the statement that the rural omes of our country need more evergreen trees about them." After referring to the limited number of species planted in years gone by he continued: "There is a large field for missionary ervice on the part of nurserymen who nploy traveling salesmen in exerting hemselves to push the sale of such trees nd benefit mankind and our country hereby. I am not now arguing for the improvement of the lawns and large estates of wealthy landowners. Landscape designers and engineers take care of these, and are probably doing their work fairly well. But the multitude of country home owners, who are neither very wealthy nor very poor, who do not consult landscape gardeners and who have not had their attention called to some of their own needs nor learned to appreciate them, require the sympathy, encouragement and assistance of the nurserymen. Every nurseryman who raises ornamental trees for sale should have himself, or else have in his employ one who has, some knowledge about the simple arrangement and planting of home grounds, and it should be his duty and his pleasure to freely assist his neighbors and patrons with suggestions in such lines, as occasion is presented." Mr. Moon went on to state that among the conifers to be recommended for ordinary planting, experience led him to include at least fifty species, and he proceeded briefly to mention their individual merits.

Other Addresses.

The program for Thursday called for the election of officers and the selection of next place of meeting, with a number of routine reports of standing committees, and the following papers:

"Our Department's Work," by R. A. Pearson, Commissioner of Agriculture, Albany, N. Y.

"The Science Part of Nursery," Prof. L. H. Bailey, Cornell University.

"Commercial Peach Orchards," E. A. Berckmans, Augusta, Ga.

"The Experiment Station and the Fruit Interests," by Dr. W. H. Jordan, New York Agricultural Station, Geneva, N. Y.

"Relations Between the Grower and Retail Nurserymen," by F. S. Osborne, Rochester, N. Y.

Thursday afternoon the protective associations hold their regular annual meetings.

Local Hospitalities.

The local hospitalities, which were on a more elaborate scale than ever before, began with a ride Wednesday afternoon through Rochester and the parks as guests of the western New York nurserymen.

For Thursday afternoon the visiting ladies were invited to a reception and luncheon at the Genesee Valley Club and Thursday evening the ladies were asked to a theater party at the Lyceum theater, adjoining the hotel. For the men a smoker was announced for Thursday evening at the Masonic Temple, with "something doing every minute." Friday was left with no set program in order to make it possible for the visitors to do business with one another and to inspect the nurseries.

The entertainment was in the hands of the following committees of western New York nurserymen:

Executive Committee: William Pitkin, J. M. Pitkin, Charles J. Brown, Charles L. Maloy, F. S. Osborne, Horace Hooker, William C. Barry, A. H. Salter, George C. Seager.

Committee on Finance: William C. Barry, Irving Rouse, Nelson Bogue, George C. Perkins, George S. Josselyn, Theodore J. Smith, John B. Morey, William J. Maloney.

Committee on Rides, Excursions and Lonesome Roads: Charles J. Maloy, M. B. Fox, B. F. Allen, E. E. Grover, Charles H. Hawks, R. D. Lueltchford, A. L. Wood.

Committee on Entertainment of Ladies: Horace Hooker, R. G. Salter, J. F. Dale, E. S. Mayo, A. A. Mosher, Thomas P. Brown, C. H. Chase, Mrs. C. J. Brown, Mrs. G. C. Seager.

Committee on Smoker: F. S. Osborne, Charles L. Yates, O. G. Chase, J. M. Pitkin, O. E. Graham, Walter W. Wyman, Charles H. Vick.

Committee on Decorations: A. H. Salter, J. M. Charlton, George F. Crosman, J. M. Keller, Fred W. Vick, Fred Schlegel.

Press Committee: H. C. Goodwin, Prof. John Craig, Charles A. Green.

Trade Exhibits.

The number of trade exhibits in place at the opening of the convention was not as large as sometimes has been the case. Possibly the trade felt that exhibiting at Rochester would be in the nature of carrying coals to Newcastle. The exhibits in place Wednesday morning were as follows:

J. Frederick Lee, Rochester, advertising goods.

Clark Nursery Co., Rochester, peach seeds and raffia.

M. Brunswick & Co., Rochester, water colored fruit pictures.

McHutchison & Co., New York city, raffia.

Chase Nursery Co., Huntsville, Ala., nursery supplies, such as pruning shears and tree counters.

Rochester Lithographing Co., Rochester, advertising lithographs.

Dayton Fruit Tree Label Co., Dayton, O., tree labels.

McFarland Organizations, Harrisburg, autochromes and colored slides.

Vredenburg & Co., Rochester, lithographs and advertising specialties.

Paul C. Koeber Co., photo gelatine color process.

Stecher Lithographing Co., Rochester, fruit plates and other lithographs.

The Macmillan Co., New York city, the Cyclopedia of American Agriculture by L. H. Bailey.

Vincennes Nurseries, Vincennes, Ind., one and two-year old cherry trees.

P. J. Berckmans Co., Atlanta, Ga., Aucuba Japonica, Pertection currant, Rosa rugosa nana and Azalea Indica.

J. W. McNary, Hydrangea arborescens sterilis.

Jackson & Perkins Co., Newark, N. Y., ornamental plants.

Ellwanger & Barry, Rochester, ornamental shrubs.

William Cooper & Nephews, spraying fluids.

EVERBEARING STRAWBERRIES.

It may interest readers of the Review to know that several varieties of reliable everbearing strawberries have been originated, and will be put into the hands of nurserymen next spring, with a view to their introduction in 1911. I had three varieties here last year, and they fruited continuously from June until freezing weather, and that without watering, mulching or shading. Even the young runners, in many cases, bloomed before they sent out roots.

H. Rockhill, of Conrad, Ia., is the originator of these new varieties, and owns every plant in existence. He has worked twelve years to produce them. This spring he sent nearly 3,000 plants, comprising several varieties, to the M. Crawford Co. for propagation. M. Crawford.

JUNE CROP REPORT.

Bountiful crops of the leading cereals are promised this year, if the conditions reported by the bureau of statistics at Washington in the regular June crop summary, issued June 8, are maintained until harvest. The only bullish showing was in regard to winter wheat, in which there has been a lowering of conditions since May, the reports on spring wheat, oats, rye and barley giving promise of larger yields than a year ago.

The June report indicates a crop of approximately 389,000,000 bushels of winter wheat, as compared with a promise of 403,000,000 bushels a month ago, and a final yield last year of 438,000,000 bushels.

A spring wheat crop of 301,000,000 bushels is indicated by the June figures, compared to an indicated yield last June of 286,000,000 bushels and a final crop of 226,000,000 bushels. The heavy indicated yield of spring wheat brings the total wheat yield estimated up to 691,000,000 bushels, compared to a final harvest in 1908 of 664,000,000 bushels. The area sown to spring wheat was estimated at 18,391,000 acres, or 1,183,000 acres more than a year ago. The condition was estimated at 95.2, compared to 95 a year ago and 92.6, the June 1 average for ten years.

The condition of oats, which was reported at 88.7, was not so high as had been looked for, comparing with 92.9 a year ago. The oats acreage was estimated at 32,422,000 acres, or 78,000 acres more than the revised area last year, and the suggested crop is 1,036,000,000 bushels, compared to an indicated yield last June of 1,058,000,000 bushels. The final yield in 1908 was 807,000,000 bushels, the crop suffering severe damage between June 1 and harvest time.

The area sown to barley was estimated at 6,881,000 acres, or 3.5 per cent more than a year ago. Nearly all of the leading barley raising states, especially those in the northwest, showed substantial increases in acreage. The condition was placed at 90.6, compared to 89.7 a year ago and 90.6, the ten year average for June 1, and indicating a crop of 198,860,000 bushels, or about 32,000,000 bushels more than a year ago.

A rye crop of 30,960,000 bushels is estimated, compared to a final yield last year of 31,851,000 bushels. The condition was estimated at 89.6, compared to 91.8 a year ago. The condition of meadow hay was placed at 87.6, compared to 96.8 a year ago. The general average of pastures was estimated at 89.3, compared to 80.1 on May 1 and 97.7 a year ago.

Vegetable Forcing.

Paul Swanson, the Chicago mushroom grower and spawn manufacturer, leaves next week for a visit to his mother in Sweden. He will call on the principal spawn makers in England on his way back. Mr. Swanson will be accompanied by his family.

Norfolk, Va.—Hail, accompanying the severe storm which swept southeastern Virginia late Saturday, June 5, seriously damaged growing crops in many sections. In Princess Anne county the largest truck growers suffered almost complete loss, with all corn, tomatoes, watermelons, cantaloupes and grapes cut off.

GREENHOUSE VEGETABLES.

New York, June 7.—Cucumbers, $1 to $3 box; mushrooms, 10c to 50c lb.; tomatoes, 10c to 15c lb.

Chicago, June 8.—Cucumbers, 40c to 50c doz.; lettuce, 5c to 10c box; radishes, 50c to $1 per 100 bunches; mushrooms, 35c to 45c lb.

Boston, June 7.—Cucumbers, $1.50 to $3 box; tomatoes, 20c to 25c lb.; mushrooms, $2.50 to $3.50 4-lb. box; parsley, $1 to $1.25 box; bunch beets, $1 to $1.50 doz.; bunch carrots, 75c to $1 doz.; bunch turnips, 75c to $1 doz.

MULCHING STRAWBERRY PLANTS

Please tell me whether sphagnum moss would be good to mulch strawberries with. Any information on this subject will be thankfully received. L. D. P.

I never heard of using sphagnum moss for mulching strawberry plants, but I am afraid that it would hold the moisture too long after a rain and let the berries get wet in the mulch, while straw drains quickly, and the berries have a dry, clean mat to lie on. I cannot see where sphagnum would have any advantage over the straw for a mulch. It would also be more expensive. H. G.

WAYSIDE NOTES.

R. W. Allen, of Hudson, N. Y., reports the heaviest business within his recollection. Everything went at Memorial day. At the time of my visit he was decorating the Clark lot at the cemetery with such uncommon plants as crotons, Pandanus Veitchii and the like. He thinks of growing a house of cattleyas, having many calls for the blooms.

Adam Laub's Son is the title of the new firm that succeeds A. Laub & Sons, at Wappingers Falls, N. Y., and it is safe to say that the excellent reputation made by the old firm in the past will be maintained in the future. A new Kroeschell boiler has been installed.

That Decoration day at Newburgh, N. Y., broke all records is the opinion of R. Harry Cathcart, Jr., of the Yuess Gardens Co. Both cut flowers and plants never sold better.

The Schaefer Co., at Newburgh, did a big business in Memorial wreaths.

The Newburgh Floral Co. made heavy shipments of carnations, and could have quadrupled the number had old Sol been more accommodating about that time.

The Saltford Flower Shop, at Poughkeepsie, N. Y., has some fine orders to fill for the sweet girl graduates at the famous Vassar College and at Bennett School.

The Chatham Floral Co., at Chatham, N. Y., is going heavier into carnations and lighter on violets, although the art of growing the latter is not a lost one with them, by any means. They are simply meeting the demand.

A. J. Schmutz, of North Adams, Mass., believes in specializing. This year he had a fine lot of geraniums and fuchsias grown as standards. They sold well at good prices. He intends adding lantanas and heliotropes, as these are easily trained.

A. C. Holton, of Bennington, Vt., reports a good season. He has plans made to make a considerable addition to his plant this summer.

Alex. Elmslie & Co., of Barre, Vt., are adding one house, 20x100 feet, of Lord & Burnham construction. Plants of all kinds sold well.

R. Bannigan has purchased the Montpelier Greenhouses, at Montpelier, Vt., and assumes all responsibility after July 1. Mr. Bannigan has been connected with the establishment for some years as grower.

H. W. Field, of Northampton, Mass.,

Vegetable Plants

BEETS—Crosby, Egyptian and Eclipse, $1.25 per 1000.

CABBAGE—Field-grown, all leading varieties, $1.00 per 1000; 10,000 and over, 85c per 1000.

CELERY—White Plume, Golden Self Blanching and Giant Pascal, $1.25 per 1000.

EGG PLANT—N. Y. Improved and Black Beauty, $3.00 per 1000.

LETTUCE—Big Boston, Boston Market, Tennis Ball and Grand Rapids, $1.00 per 1000.

PEPPERS—Ruby King, Bull Nose, Sweet Mountain and Neapolitan, $2.00 per 1000. Chinese Giant and Cayenne, 50c per 100.

ADAMS, MASS.—Adolph Koch was injured recently by being thrown from his wagon, which had collided with a telephone pole. He was rendered unconscious and there were fears that his injuries might prove to be serious.

PITTSBURG.

The Market.

June started right, trade being far ahead of last year, and it is well it was so, as flowers were never so plentiful. Peonies and iris are coming in such quantities that they can scarcely be handled, much less sold, and while business was reported much ahead of last year, there was still more stock lost than sold.

The country people have been keeping the market more than filled with peonies, iris, centaurea (Ragged Robin) and garden roses, the finest ever seen. These are sold at prices that the stores cannot compete with.

The plantsmen are over their rush, and while they report a good season, they all have lots of stock which they are anxious to dispose of. As one grower says, "These are trying times, when one is trying to get all he can for his stock and still never letting a customer get away at any price."

Various Notes.

The Florists' Club met in the store room of the Pittsburg Cut Flower Co., Tuesday evening, June 1, and while the subject was "Peonies," it was just two days too early, and there was not a bunch of peonies brought in. The Schenley Conservatories sent in some herbaceous flowers, and Mr. Crooks, gardener for J. H. Park, showed a plant of Cattleya Mendellii with thirty-six blooms, which was fine. A committee was appointed to look into the possibilities of arranging for a picnic and reporting at the next meeting.

It is reported that the matrimonial bug, which started its work this season with the Pittsburg Cut Flower Co., has been circulating through some of the other wholesale houses. It is not known at this time exactly how many have been stung, but there will be several weddings to report before long.

A. W. Smith, Jr., who was reported ill last week, is still confined to bed with typhoid fever.

Ernest Winkler, an employee of the Pittsburg Rose & Carnation Co., was found dead Tuesday night, June 1, on the tracks of the Butler Electric railroad. He left the city on the car leaving Etna at 11:25, which did not stop until it reached Bakerstown Station, and it is not known whether he attempted to jump off or fell off about Valencia, several miles from his home. The car following passed over the body, then stopped and picked him up. Mr. Winkler was well known, having worked for several of the most prominent growers here for the last ten years. Hoo-Hoo.

PACIFIC COAST.

SAN FRANCISCO.

The Market.

Sufficient time has elapsed since Memorial day so that it may be interesting to recapitulate somewhat. From a few sources reports come that business was not up to that of last year, and from equally many the conditions are reported as having been slightly more favorable. The greatest falling off was in the line of shipments to interior towns, though much trade was also lost on account of the inability to get the necessary assortment of cheap outside stock with which to satisfy a certain portion of the retail trade. The former condition I discussed partially in a previous letter, and the indications present at that time were fully carried out between then and the latest shipping hour. I think that out-of-town orders were at least twenty-five per cent less than they were one year ago.

With the counter trade the greatest difficulty was to get stock that is usually called for on this occasion, and the efforts at substituting something higher priced often ended in a dissatisfied buyer or in a sale on which the retailer realized but slight profit.

Usually at this season we have quantities of Bride gladioli. They are good sellers and the public has begun to demand them. Owing to the coldness and excessive winds for several weeks, they were not up to their early blooming quality and many patches are yet uncut. Carnations, also, were not as numerous as the retailers would like to have seen them. All colors, with the possible exception of the darker pink varieties, were in such demand that the growers were able to ask considerable more than the regular price for them, and the retailers lost thereby. Roses of the shorter stemmed stock were plentiful, but they did not move as briskly as the other flowers.

Sweet peas were in good quantity and quality and, taken altogether, were the best item in the market. Other classes of stock, such as valley and lilies, were only in fair demand. There was a dearth of good coreopsis, gaillardias, stocks, candytuft, bachelor's buttons and callas. Had these articles been more plentiful, it would have made a big difference with the public, who, when they saw so little of the typical Memorial day flowers on show in the stores, usually did their purchasing from the street hucksters or from the stands in the neighborhood of the cemeteries.

Various Notes.

D. F. Carnes, representing the Roseville Pottery Co., is visiting the local dealers with a fine line of samples of vases and jardinieres.

J. H. Johnson, formerly a landscape gardener in southern California, has located on Park street, Alameda, Cal.

C. C. Morse & Co. are showing a great variety of cut sweet peas in their Market street store, including some new seedlings of their own raising.

The California Eucalyptus Plantation Co., composed of local growers, has purchased the Dillon Beach ranch, near Tomales, Cal., from T. J. Steele. This ranch borders on the ocean near Dillon Beach, and also includes the sand spit which juts into Tomales bay. It is the intention to plant gum trees, for which purpose the soil is peculiarly adapted, and there are many thousands of the gums now growing on the land. The price paid for the land was $31,000.

John Gill, of West Berkeley, is on a trip through Oregon and Washington.

G.

PORTLAND, ORE.

The Market.

Business for the last month has been exceptionally good. The demand for Decoration day far exceeded the supply, especially in carnations and roses of light shades, and stock realized good prices.

20,000 SHASTA DAISIES

Alaska, California and Westralia, field-grown from divisions of Mr. L. Burbank's original stock; not seedlings, extra strong divisions.

	Per 1000	1000
5 shoots or more	$2.50	$24.00
3 to 4 shoots	2.00	19.00
1 to 2 shoots	1.25	11.00

Cyclamen Persicum Giganteum

Fine plants, large flowers from named varieties, 800 4-in ready now, $10.00 per 100; 3000 3-in. ready now, $7.00 per 100.

Seeds of Shasta Daisy—Alaska, California and Westralia, 1000 seeds, 50c; oz., $2.00 net.

Pentstemon Hybridus Grandiflorus, new, largest flowers, in great variety of colors, the best of all Pentatemons, pkt., 25c; oz., $1.50.

THE BARTELDES SEED CO.
DENVER, COLO.
Descriptive wholesale price list now ready

On account of the lateness of the season, the outdoor stock was scarce, especially peonies, which are always useful for decorative purposes, as well as a source of profit. The general report is of at least twenty-five per cent increase over former years, especially in the shipping trade, which was exceedingly heavy.

June weddings are numerous, and the demand for brides, bouquets of lily of the valley and roses is an important item in the trade.

Various Notes.

Clarke Bros. were given the honor of forwarding a beautiful bouquet of roses to President Taft, who will push the golden button in Washington June 7 which will inaugurate the Portland Rose Festival. Portland is known as the Rose City and is well worthy of the name. Roses are to be seen in every yard, no matter how humble the cottage may be. The Rose Festival will be held June 7 to 12, including many features, floral parades in the day as well as the float parade in the evenings. The floral exhibits will be placed in the California state building, where rare blooms will be judged and prizes distributed. The local florists will also exhibit booths for competition.

The Tonseth Floral Co. is now located at 325 Morrison street, which offers better facilities for handling their ever increasing trade.

The sympathy of the trade is extended to James Forbes, whose wife died June 3 at his home on Mt. Tabor after a lingering illness. E. R. C.

LOS ANGELES, CAL.—T. Takahashi, proprietor of the New Yokohama nursery, was painfully injured recently in a runaway. He was thrown from his wagon and dragged over the ground for more than a block. His right leg was fractured above the knee. He was treated at the Receiving Hospital and later removed to his home, near Eastlake Park.

WAVERLEY, MASS.—Plans for the greenhouses to be erected for the State Agricultural College, at Cornell, have now been completed. There are to be three large "head houses," one two stories high, constructed of terra-cotta blocks and containing laboratories and workrooms. If all the buildings were placed end to end they would extend 1,331 feet, and they will contain 109,625 square feet of glass.

Every Florist, Seedsman and Nurseryman Should Have this Book

TIMELY AND IMPORTANT **PUBLICATION**

THE SCIENTIFIC ASPECT OF

Luther Burbank's Work

By David Starr Jordan and Vernon Lyman Kellogg

Illustrated with 37 two-colored engravings, descriptive of the **Spineless Cactus** as grown for food purposes, the **Stoneless Prune,** the **Seedless Apple,** the **Plumcot,** an absolutely new fruit, the **Opuntia,** and numerous hybrid fruits, berries and flowers.

BALTIMORE.

The Market.

The observance of Decoration day, or at least that part that is of interest to the florists, must be becoming more general, as the demand this season shows a large increase over that of previous years. At the Florists' Exchange, both Saturday and Monday, the stock was well cleared out. Peonies were behindhand, owing to the retarded season. Rugosa roses, rhododendrons, snowballs and orange blossoms were available for Decoration day—a decidedly unusual thing. People were not looking for this class of stock, however, and much of what was sent in might better have been left on the bushes to illuminate the landscape. Greenhouse flowers had the call, and customers were inclined to be as critical as at Easter or Christmas as to quality, although naturally looking for lower prices than at the winter holidays.

There is a considerable number of coming June weddings, and these and the commencement exercises of the various schools and colleges will stir up some business for a week or two, and after that apathy will prevail.

Peonies were a glut on Saturday, June 5, and were sold at 2½ cents each, the lowest price reported in years.

Various Notes.

On Friday and Saturday, June 4 and 5, we were visited by heavy winds and rains and some hail in the suburbs, but no damage was reported except to trees and shrubbery.

The Baltimore county school board awarded the contract for erecting the agricultural school, near Sparks, to Walter E. Burnham, for $16,873.

Charles Cook's new residence at Catonsville is nearly completed, and he expects to start to erect several new houses for carnations at once.

D. T. Quick will start to build two houses at Woodlawn, Baltimore county, for carnations and roses. Q.

PLYMOUTH, O.—Fannie E. Case reports the largest spring trade on record. The Memorial day business extended from Saturday to Monday and the only trouble was through failure to receive all the stock ordered. School closings, weddings and funerals now keep things going.

INDIANAPOLIS.

The Market.

Business continues good, and everyone has about all he can do. Funeral work, combined with commencements and weddings, has kept the store men up early and late. Beauties are still of good quality, but roses and carnations are showing the effects of warm weather. A number of commencements last week called for quantities of Beauties, roses, carnations, sweet peas, valley and orchids. Peonies are coming in great quantities, and are selling as low as $2 per hundred.

The plantsmen are still busy, but are complaining about the weather. Three days' rain in every week, and no sun, has been hard on the geraniums. I do not think there is a florist in the city that could fill an order for 300 blooming geraniums.

Various Notes.

Herman Junge is on the sick list. Mr. Junge is a chicken fancier, as well as florist, white Plymouth Rocks being his choice. It is a little early yet to tell whether he is a good judge of chickens, but they will be large enough about July 15.

B. Fohl has returned after a four months' stay at Jeffersonville.

John Rieman reports business fine.

Mrs. Ernest Rieman has gone to Germany on a visit. She expects to remain all summer.

A. Wiegand & Sons have been cutting some fine Cattleya Mossiæ.

Roepke & Rieman have a fine lot of Gloire de Lorraine begonias. This firm recently purchased a new covered wagon.

John Heidenreich is cutting some fine gladioli.

A leaking gas main did considerable damage to Henry Rieman's carnations.

John Bertermann and family have moved to their farm for the summer. Mr. Bertermann is rather proud of a running spring, which he has connected with a hydraulic ram, and thus supplies his residence, about 600 feet away, with water. Next year he intends to erect a water tower, connect it with this ram and supply water for the greenhouses and the entire farm. No doubt this will be a great money-saver. H. L. W.

UNITED STATES CUT FLOWER CO., Elmira, N. Y.

Mention The Review when you write.

MINNEAPOLIS.

The Market.

Decoration day cleaned out the entire stock of plants in the city this year, and the cut flower sales were highly satisfactory, as there was good variety and prices were kept up. Roses, carnations, peas, lilies, gladioli, etc., are plentiful, and the demand at present for graduation bouquets and wedding decorations is excellent. Geraniums, cannas and vincas are scarce throughout the city, and it is with difficulty that good stock can be obtained to plant out. Growers have their carnations planted out, for the most part, and are now busy planting roses.

Various Notes.

The Minneapolis Floral Co. had a phenomenal shipping trade the last two weeks, and find business excellent.

O. C. Swanson had good Decoration day business, coupled with a number of wedding orders.

Miss Whitted finds orders for funeral work coming in as fast as usual, and the rush continues at this store.

R. A. Latham is satisfied with the business for the week. He finds stock plentiful and good. M. E. M.

ERIE, PA.

The Market.

Veranda and window boxes are receiving much attention at the hands of the local florists at present. Erie people almost live on their verandas in summer, and no pains are spared in decorating them artistically.

Various Notes.

F. W. Bannister, of H. D. Mann & Co., Syracuse, N. Y., was in the city June 2.

Miss Anna Moran, saleslady for the Baur Floral Co., is taking a vacation.

Ora D. Hill, of Corry, Pa., was in the city on business last week.

Henry Hapgood has returned from the University of Pittsburg for his vacation.

Mr. and Mrs. Thos. Kinsman, of Buffalo, N. Y., were the guests of Mr. and Mrs. A. J. Baur over Memorial day.

B. P.

Geraniums

We have a fine lot of Geraniums in 4-in. pots, in bud and bloom, in fine shape for spring bedding. **Marvel, A. Ricard, M. de Castellane, Castries, J. Viaud, Bte. de Poitevine, Ctsse. de Harcourt,** $7.00 per 100; 1000 or more at $65.00 per 1000.

Maranta Massangeana—$5.00 per 100.

The Storrs & Harrison Co., PAINESVILLE, OHIO

DETROIT.

The Market.

With Memorial day over, things are moving along more smoothly again. Why it is that everyone wants planting, window-boxes, vases, etc., done surely by Decoration day the poor, overworked florist cannot understand. People to whom this day means no more than a half holiday insist upon their hanging baskets being delivered by this day. In our city the weather does not make it safe to do outdoor work until about May 20, leaving ten days, usually cut down to about five by rainy weather, in which to do the work.

Cut flowers so far are not any too plentiful, even with a somewhat reduced demand. The only really scarce article is lily of the valley. Smilax is in good demand and none too plentiful. Peonies are now coming in, and large quantities are used daily.

Various Notes.

A little Miss Pearce arrived at the home of Hubert Pearce June 2.

Horace R. Hughes, of Chicago, spent several days in Detroit this week. Mr. Hughes believes that by appealing to the children in advertising and window displays the grown folks will follow the little ones' footsteps to your store.

In one of the recent weddings in our city the skeleton leaves, for sale by the supply houses, were used to good advantage by the Bemb Floral Co. The leaves were used to form the background for fans of Sunrise roses carried by the bridesmaids.

By way of diversion the entertainment committee of the Florists' Club provided a little music and vaudeville the evening of June 7. H. S.

Sharon, Mass.—Mrs. J. P. Snow had an especially complete and attractive stock for Decoration day trade.

BEGONIA GLOIRE DE LORRAINE

NEW POMPON CHRYSANTHEMUM "Baby Margaret"

A sport from "BABY" (Yellow)

This, we think, is the most valuable Pompon to date; is pure white and of as fine form as the famous yellow "Baby." Indispensable for funeral work, brides' bouquets, wedding table decorations and many other purposes.

In The Reviews Classified Advs.

NEW BEDFORD, MASS.

The Market.

Decoration day trade here was a hummer. Everything was cleaned out in good shape. Bouquets were the most called for. Good flowers were scarce. Carnations were none too plentiful; 75 cents and $1 per dozen were the retail prices. Roses were of good quality; $1 and $1.50 per dozen, retail, were the selling prices. Candytuft and feverfew helped out considerably. White and purple lilac was also used in the cheap bouquets. Spiræas and hydrangeas sold well. Pansies, daisies and forget-me-nots in pans sold well, by the dozen. These sold at 35 cents and 50 cents per dozen, retail. Geraniums were in tremendous demand; there were hardly enough in bloom to meet the demand. Cut flowers sold well.

Carnations now are quite plentiful, and roses are still holding out well. Garden work is still in full swing, and some of the florists have large gangs at work yet. We are having good, warm weather now. The parks and commons are looking fine just now.

Various Notes.

E. H. Chamberlain had some nice pots of dwarf forget-me-nots. He reports that the call for geraniums was exceptionally good.

A. B. Hathaway and R. H. Woodhouse were kept busy filling vases and urns for the cemetery trade. Mr. Hathaway had some nice late tulips.

H. A. Jahn cut some fine Lloyd carnations.

Charles Granger has some nice tomato plants. He is growing some fine aster plants. W. L.

CHESAPEAKE, OHIO.

Decoration day here extended over three days and the stock of our florists was depleted accordingly.

C. A. Peters, of Huntington, W. Va., had a good trade. So did Miss Martin, on Tenth street, and she deserved it, as she is almost blind and a worthy lady.

Henry Conklin, of Chesapeake, O., and Central City, W. Va., was rushed, but the busiest man was Wm. H. Carp, of Ashland, Ky., where empty benches looked as though a cyclone had struck them.

The almost continual rains, while they make things grow, bother us in bedding out our plants. H. C.

XENIA, O.—E. E. Lighthizer has built a greenhouse to grow vegetables for the local market. George C. Crane also has built a greenhouse for vegetables at his place near the fair grounds.

Bay Trees, Boxwood, Palms, Araucarias,

and other decorative material.

EVERGREENS, in all choicest varieties. CLEMATIS, and all other Vines and Climbers. Trained Fruit Trees, Greenhouse Grapes, Herbaceous Plants, Trees and Shrubs.

ORCHIDS! ORCHIDS!

There is no reason why all of you grower-experts should not try us and see with your own eyes the handsome Orchids we handle, and at such low prices. We call your attention to the special sale on the following three varieties:

Cattleya Mossiae, imported plants, $40.00, containing 450 bulbs.
C. Percivaliana, 9 to 12, $1.00.
C. Gaskelliana, 9 to 12, $1.25.

No less than two new growths, which we guarantee will pay the purchase price, as they are visible in the sheath. Same varieties, 12 to 18 bulbs, $1.75; 18 to 25 bulbs, $2.50.

The largest plants have 3 to 5 new growths. We are true importers and wish to be acquainted with all of you. C. labiata, C. gigas, Sanderiana and others, shortly.

GEO. A. KUHL, Wholesale Grower, PEKIN, ILL.

Mention The Review when you write.

Hello, Busy Bee! Can you wait on me? Certainly I can, and this time with stinging prices. We want room to place our importation of **palms, araucarias, ficus, ferns,** etc., therefore our bedding stock must go—no matter what people say about our prices. Our surplus stock is in fine condition, and we can give our customers more for their money than ever before.

Geraniums, Jean Viaud (pink), Beaute Poitevine, Alphonse Ricard, S. A. Nutt, Berthe de Presilly (best double new pink) and Ivy, 4-in. pots, $7.00 per 100. Mixed, variegated, 3½-in., 7c.

Scarlet Sage (salvia). The true Clara Bedman or Bonfire variety. Ours is the true, medium tall, genuine variety, an immense bloomer, with deep red, brilliant flowers, so well-known and admired in the capitals of Europe and America. The seeds of this famous variety were gathered by me in Zurich, Switzerland, the home of Salvias. Price, 4-in. pots, in bloom, $7.00 per 100.

Ageratums, best of the blue dwarf, 4-in. pots, in bloom, $6.00 per 100.

Heliotropes, best of blue dwarf variety, 4-in. pots, in bloom, $7.00 per 100.

Begonia Vernon, newest strain, the well-known dark variety. Our own importation, the seeds having been gathered from the best specimen plants by me on my trip to Switzerland and France. It does well in either warm or cold climate and blooms profusely in July and August, even when fully exposed to the sun, and is very valuable for bedding purposes, in many instances taking the place of Geraniums and other plants. Price, 4-in. pots, in bloom, $8.00 per 100.

Begonia Flambeau, on account of its waxy foliage (pink flowers in summer), is valuable for window boxes, vases, and makes a striking appearance, 5¼-in. pots, $2.00 per doz.

Fuchsias, assorted, in bud and bloom, 4-in. pots, $6 00 per 100, worth $10.00.

Lantanas, assorted, 4-in. pots, in bloom, $7.00 per 100.

Mignonette, 4-in., $7.00 per 100.

Nasturtiums, dwarf, assorted, 4-in. pots, $6.00 per 100.

Stocks, German, six weeks, 4-in. pots, $7.00 per 100.

Vincas, variegata and periwinkle, 4-in. pots, $10.00 per 100.

Cannas, 4-in. pots. Henderson, Poitevine, Bismarck, Mlle. Berat, Black Beauty, Austria, etc., $8.00 per 100. King Humbert, 4-in., $10.00.

Aster Victoria, German, 5 best sorts, $3.00 per 100.

Honeysuckle, large, 6-in., 50c; 10 plants sold at 100 rates.

Ampelopsis Veitchii, 4-in , 10c.

Dracaena indivisa, imported, broad-leaved, big plants, 50c to 75c.

Solanum Myrtifolium (Jerusalem Cherry), finest improved, always loaded with large berries, 2½-in. pots, $5.00 per 100.

SMALL PLANTS

Petunia California Giant, 3-in. pots, $4.00 per 100.

Petunia Inimitable, 2½-in. pots, $3.00 per 100.

Verbenas, assorted, in bud, 2½-in. pots, $3.00 per 100.

Coleus. Verschaffeltii, Golden Bedder and Queen Victoria, $3 00 per 100.

Coleus, fancy leaved, 2½-in. pots, $4.00 per 100.

Marigold, Tagete's or French dwarf, 3-in. pots, $3.00 per 100.

Centaurea Gymnocarpa (Dusty Miller), 2½-in. pots, $3.00 per 100.

Parlor or German Ivy, 2½-in. pots, $3.00 per 100.

Salpiglossis, assorted, 2½-in. to 3-in. pots, $3.00 per 100. 1 dozen plants sold at 100 rates.

Lobelia Crystal Palace (blue), 2½-in. pots, $3.00 per 100. Kathleen Mallard, new double, 3-in. pots, 6c.

Tradescantia, green and variegated, 2½-in. pots, $3.00 per 100.

Kenilworth Ivy, 2½-in. pots, $3.00 per 100.

Thunbergia, or Black Eyed Susan, 2½-in. pots, $3.00 per 100.

Cuphea, or cigar plant, 2½-in. pots, $3.00 per 100.

Vinca variegata, 3-in., $4.00 to $5.00 per 100.

Ageratum, blue, dwarf, 3-in. pots, $4.00 per 100.

Asparagus Plumosus Nanus, 2¼-in., bushy stock, $3 00 per 100; $25.00 per 1000; 3-in. pots, $4.00 per 100.

Cosmos, 4 early varieties, separate colors, made up 3 plants in a pot, $3.00 per 100 pots.

Summer Chrysanthemums, best varieties, 3-in. pots, $4.00 per 100; 4-in., $7.00 per 100.

Pyrethrum Aureum (Golden Feather), 2½-in. pots, $3.00 per 100.

Roses, Climbing Lady Gay, Crimson Rambler, D. Perkins, 5½-in. to 6-in. pots, 25c, 30c to 40c.

REMEMBER

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa,** and those we offer were imported the Spring of 1908.

Florists should bear in mind that no garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, a consignment of small sizes just in, per Steamer Manitou, 35c, 40c, 50c and 60c.

Kentia Forsteriana and Belmoreana, just arrived, per Steamer Manitou, from Antwerp. Price for good stuff, 75c, $1.00, $1.25, $1.50, $2.00 each.

"Mein Haeuschen steht im Gruenen."

Look! look! look! Godfrey Aschmann's world-wide-known, pure white, fragrant moonvine, **Ipomoea Noctiflora,** with flowers as big as a saucer, 4-in pots, staked up, $12.00 per 100; 3-in., $8 00, and 2½-in., 5c in dozen or 100 lots.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

Godfrey Aschmann, West 1012 Ontario St. **Philadelphia, Pa.**

LEXINGTON, KY.

The Market.

The plantsmen have been busy for the last four or five weeks with bedding stock and they are all about cleaned out for this season. Several thousand more plants were disposed of this year than last year, with prices about the same. Some of the florists that ran wagons to the small neighboring towns sold out quantities of stock in that way.

Cut flowers are abundant and meet with a satisfactory demand at present. Sweet peas of good quality are coming to this market. Other outdoor flowers are of excellent quality, owing to the heavy rains we have had in the last few weeks. Several thousand asters are being planted by the florists. It seems as if there will be plenty to supply the demand this year. We are having excellent weather in this locality and everything is looking well so far.

Various Notes.

The glass has arrived for the new carnation house which is to be erected in the near future at the J. A. Keller estate, on East Sixth street.

S. S. Kelley, Clifton Heights, reports good business. Bedding stock has been in good demand with him this spring.

August Le Clere has things looking well at the asylum grounds, of which he has charge.

Honaker the Florist is cutting roses and carnations of good quality.

E. C. Pruner, representing E. H. Hunt, Chicago, called on the trade here last week. Blue Grass.

BIDDEFORD, ME.

From the local florists, and in fact from all New England, come reports of the extreme scarcity of flowers for the Memorial day observances. George L. Mahoney & Co., of Saco, report the fewest outdoor flowers for many years; in fact, since they have been in business.

Besides this, the unusual amount of dark, sunless weather has curtailed the production under glass to a great extent. On this side of the river, Charles S. Strout and T. W. A. Smith say the supply was good, but still the demand was so strong as to make it difficult to find stock for the filling of late orders.

Wendell, Idaho.—William S. Pew, formerly of Whitehall, Mich., is now making his home here, and will build a greenhouse soon.

HOSE

Watertown, N. Y., Feb. 12, 1909.
Scranton Florist Supply Co.
Scranton, Pa.

Gentlemen:—We have used your special brand of hose for two years and it yet shows no sign of giving out. It is the most satisfactory hose we have ever used. Yours respectfully,
F. A. Bennett & Son.

Greenhouse Heating.

THE REVIEW is glad to answer inquiries in this column, concerning anything which has to do with greenhouse heating, and also is glad to have subscribers give reports of how they have overcome their heating troubles.

A GREAT many florists are reluctant to invest their money in digging holes in the ground; they want to set their boilers as near the surface as possible. While the system can be made to work without an adequate pit, the money laid out in digging and walling the hole will usually come back in a short time in the saving of coal.

HEATING HINTS.

To make a stiff or immovable joint, use shellac; for a movable joint, use graphite. Red lead is the best all-around substance to use.

To find the water line in a steam boiler when the water is below the glass, take a wet cloth and draw it quickly down over the head sheet. You will have to do this three or four times to find out the line of the water. The water from the cloth will evaporate quicker where the steam is than where the water is.

Keep the register in the fire door open a little. It helps to burn the gases which generally go up the chimney.

Keep the flues in your boiler clean; soot is a non-conductor of heat.

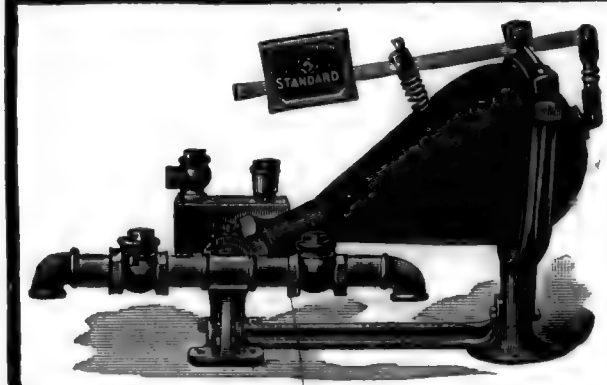
Set up the hand holes and man hole on tubular boilers after they are under way, as the heat expands them, and they are liable to leak.

Put a piece of white cardboard with a narrow strip of red ribbon on it behind the water glass, and you will not have to lose your eyesight looking for the water in the night.

If the boiler gets to foaming, cool it down and let the water settle; then start it up easy again. You would better put a clean supply of water in the boiler when the fire is out and the sun shining in good shape.

Do not turn on the cold water when you do not see any in the glass; you are liable to be picked up in the next county.

G. T. E.



BOILER WORKING POORLY.

I have a house 25x180, six feet to the eaves, fourteen feet to the ridge, with glass in the south end and three feet four inches of glass in the sides. There is a 3-inch flow on each side wall, with four 2-inch returns right below each flow pipe, and one 2-inch return on each walk, mak-

Mention The Review when you write

ing two 3-inch flows and ten 2-inch returns. My boiler is six feet long and thirty inches in diameter. It is a shell filled full of 2-inch flues. I believe there are seventy-six flues. The boiler is set in brick. The coldest outdoor temperature is 28 degrees above zero. I use oil (distillate) for fuel. I can not seem to get the desired heat when we have continuous cold weather. Would a larger boiler heat up my pipes better? Is that a good style of boiler for hot water, or would a regular steam boiler be better? How do you figure the heating capacity of a boiler for hot water? The reason I use a shell boiler full of flues is that I think that when using oil it gets the heat distributed through the water better. E. C. H.

The size of your boiler is all right and the style is good, as it has a large heating surface. Keep the boiler flues clean and the water in the system clean, and I think it will work satisfactorily. The boiler has nearly its capacity now, but it will cost quite a sum to put in a new boiler. Give the boiler a good cleaning, and next winter push it in good shape, and it will heat all right.

In regard to the heating capacity of a hot water boiler, figure twenty-two square

feet of radiation for every 100 square feet of glass, multiplied by 1.5. Divide this by 125. The amount found will be the grate area. Ratio of your style boiler in heating surface to grate area is twenty to twenty-five. G. T. E.

PIPING TWO HOUSES.

We want to pipe two houses, one 21x100 feet and the other 27x100 feet. How large pipe should we use for the flows, and how many 2-inch returns do we need? We will use hot water. The house has two feet fall to the boiler. How deep in the ground should the boiler be? We want 50 degrees in zero weather. The boiler is located at the north end of the larger house. The houses have 5-foot walls and are twelve feet to the ridge. A. G.

Run two 3-inch flows through the middle of each house and under the ground about a foot or so. Elbow off at the far end, one to right and one to left. In the 21-foot house, come back with four 2-inch returns on the half exposed to the weather and three 2-inch returns on the other side. In the 27-foot house run two 3-inch flows the same as in the 21-foot house, with five returns on the exposed side and four on the protected side. If the houses are separated by a space, put in one more 2-inch pipe and divide evenly.

The boiler should be down so that the top of the boiler is six feet below the returns in the greenhouses. This gives a good, roomy place over the top of the boiler. G. T. E.

DENVER.

The Market.

Decoration day business was equal to or greater than last year, prices obtained being better, the sum taken being greater, with perhaps less stock being handled, owing to the scarcity. There being no outdoor flowers of any kind, the call for carnations was particularly heavy and every store was completely sold out, which boosted the prices. Some growers asked Christmas prices, regardless of the quality, which may have been a mistake, as some of the store men said they would rather be out of them than to hold up their customers for an unreasonable price.

Roses were fairly plentiful and Beauties were in demand, with the supply about balanced.

Take it all in all, the business done

MOREHEAD RETURN STEAM TRAPS

The present improved **Morehead Automatic Return Steam Traps** are the result of twenty years' use and development in thousands of heating and steam plants throughout the world. The "Morehead" was the **Original** and has at all times been the **Standard** by which the comparative values of other traps have been measured. They've stood the test for 20 years, and have gained the "well-done" of all users. Will you join the ranks? **Catalogue on request.**

High-Grade Boilers

Get Our Catalogue For GREENHOUSES STEAM and HOT WATER

GIBLIN & CO., Utica, N. Y.

Always mention the Florists' Review when writing advertisers.

To the man who needs a Boiler

THE KROESCHELL BOILER

was installed to heat over six million (6,000,000) square feet of glass during the past three years.

Expressions from the men who know:

Used steam was advised to change to your hot water boiler. Find it about half the work with your boiler. We would have no other.
STERNITCKE BROS., Park Ridge, Ill.

Have handled many greenhouse boilers of other makes, but Kroeschell beats them all. I get perfect circulation in 30 minutes. WM. OTTO, Oshkosh, Wis.

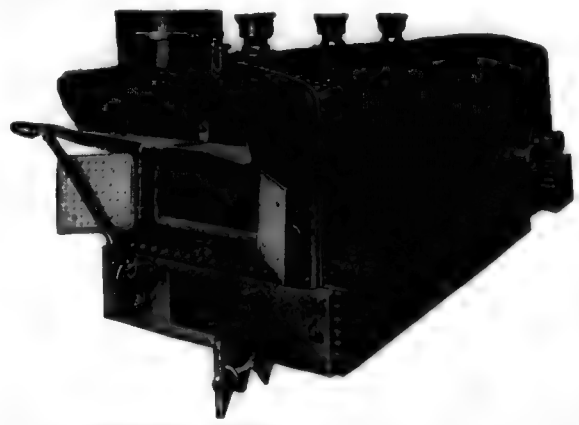
Former boiler, 16 horsepower steam; as much difference as between day and night. Your boiler does not need recommendation. Will recommend itself wherever used.
THEO. F. DAMEROW, Grosse Pointe, Mich.

Your boiler, in my estimation, is the best in use today. We have two of them.
POTTER & SONS, Waukegan, Ill.

When we rebuilt our plant, we were undecided whether to use your boiler or a cast iron boiler. We are satisfied we made no mistake in using Kroeschell.
YEATMAN & WAY, Kennett Square, Pa.

Have fired greenhouse boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast iron boilers for me. I came very close to freezing out in both instances. G. M. THOST, DeSoto, Mo.

The Kroeschell Generator



prevents boiling over, cures sluggish circulation, saves fuel, smaller mains can be used, water can be heated to 240° without boiling, increases circulation, 3 to 5 times faster; no hot water system complete without it.

HAVE YOU EVER INVESTIGATED

the one sure thing

KROESCHELL BOILERS

See the simplicity of construction. Plate material, NOT CAST IRON. Long fire travel, thin water ways. The best and the most heating surface in the world for the money.

THE KROESCHELL BOILER will give you more heat with the same piping required by other boilers, and with less fuel.

Send for our catalogue.

Kroeschell Bros. Co.

51 Erie St., CHICAGO

THE KROESCHELL BOILER

replaced 1346 cast iron boilers in 1905, 1906, 1907, and many in 1908.

Expressions from the men who know:

We are very well pleased with your boiler. I have had fourteen years' experience in heating, six with gravity steam and eight with vacuum, but give me the hot water system for all purposes. Use me for references any time.
E. LIGHTHISER & SON, Xenia, O.

Have used upright boilers, tubular boilers, and cast iron boilers. Your boiler heats up better and easier than any boiler we have ever had anything to do with. If we ever buy another boiler, it will certainly be a Kroeschell.
POOLE & PURLLANT, Washington C. H., O.

I have fired boilers both here and in Europe for the last forty years. The Kroeschell is the best type of boiler I have ever used. I have two cast iron boilers, also a locomotive boiler coupled with yours, but did not need to use the cast iron boilers this winter. Your No 7 boiler is rated at 15,000 sq. ft. of glass and carries 25,000 sq. ft. of glass until the outside temperature goes down to 10° of frost. We have no trouble to keep temperatures in our houses with easy firing since we installed your boiler. The main flows and returns are heating our potting shed and packing room, which are not included in the amount of square feet of glass. From the boiler to the farthest end of our violet houses and return is 800 ft. and circulates very quickly.
THE SALTFORD FLOWER SHOP,
Wm. D. Saltford, Pres.
Poughkeepsie, N. Y.

The Kroeschell Piping System

is being installed by many progressive florists. 1¼, 1½ or 2-in threaded pipe, or 4-in tubing is used. Boiler can be set on level with greenhouse walks. You do not need deep boiler pits.

was greater and better than ever before. Immense quantities of stock were shipped out on Friday and Saturday.

Various Notes.

The Park Floral Co. shipped in over 50,000 snowballs for Decoration day, most of them coming from Kansas and Nebraska.

It is reported that A. Mauff, of the Mauff Floral Co., has been appointed by the governor as one of the board of horticulture. E. S. K.

TAMPA, FLA.

The Tampa Floral Co., which was organized about four years ago, has found it necessary to make frequent additions to its greenhouses in order to take care of its increasing trade, and now has a total of 16,400 square feet under glass. In addition to this, large areas are devoted to growing many varieties of flowers and ornamental shrubbery in the open. The business is owned by Anton Fiehe and W. E. Dorchester, the land upon which the houses are erected being the property of the firm.

Anton Fiehe was manager for seventeen years for the Plant System, laying out all the Plant systems of shrubbery. He laid out the Tampa Bay hotel grounds and superintended them while they were the property of Mr. Plant.

THE CAPITOL LAWN TRIMMER AND EDGER

Will Take the Grass the Mower Leaves

Does what no other machine can do and what lawn mowers leave undone. It trims and edges your lawn with remarkable speed and perfection; the shield over the blades protects the flowers. We are pioneers in trimmers and the Capitol has been in use in thousands of cemeteries and lawns for the past five years. The steel disk edges your driveways. This machine will do the work of four men. **The price of the Capitol Lawn Trimmer is $5.50; complete with edger, $6.00.**

The Market.

Business on Decoration day was all that could be expected. With some there was an increase over last year, and trade would have been still better if there had been no street car strike on. Roses and carnations were plentiful, while there was any quantity of peonies on the market.

Various Notes.

Julius Niednagel & Sons are making considerable improvements at their place. They have erected one house, 20x100, on their recently acquired ground, and will build two more. They are tearing down their old houses, and in their place will erect two large houses with an office room attached. This firm had a big Decoration day business, having a large funeral on hand, also. Their plant business this spring has been immense.

Ben Kramer says Decoration day trade was better than last year, and he sold out all stock he could get. He had to hustle around for enough flowers, as he had a large amount of funeral work on hand. He has two nice bay trees in front of his store, one at each side of the entrance, and they are a good advertisement.

The Blackman Floral Co. had immense quantities of all kinds of flowers for their trade. George Blackman says that their grafted My Maryland, planted several weeks ago, are growing finely.

Miss Nellie Goodge says that the strike affected her business considerably, though she had a big day with the rest.

Austin Wallace has completed his large house. He is planting mums for an early crop.

Henry Seymour had his share of business this season, and on Decoration day he was about cleaned out of everything.

FREEPORT, ILL.

Louis Bauscher, of 578 South Adams street, is building three additional greenhouses, each 27x170 feet, which means a floor space of 13,770 square feet. This, with the old greenhouses, will bring the floor space of his range up to about 20,000 square feet. The new houses are located on a plot of ground containing four and one-half acres, facing on Adams street. The office of the new buildings will be 660 Adams street. Two sixty horse-power boilers will supply the heat, and the vacuum steam process will be used. A private waterworks system, including a 10,000-gallon tank, will also be installed.

The new set of greenhouses will be in charge of Adolph Pitterle, of Watertown, Wis., and the old plant will be looked after by John K. Downs, of Janesville, Wis., both of whom are experienced florists.

Louis Bauscher's greenhouse and truck garden business was established in 1850 by his father, the late Peter Bauscher. Twenty-six years ago Louis Bauscher took charge of his father's business and sold his first load of garden truck. For many years Mr. Bauscher restricted himself to the home trade, but for the last six or seven years he has branched out in the wholesale field.

SPRINGFIELD, O.—Permission to sell the property of the Fairview Floral Co. was sought by the receiver, Samuel F. McGrew, in common pleas court June 2. The receiver reported that the business as carried on at present can not be done at a profit, so he would like to close up the company. The Springfield Building and Loan Association holds two mortgages on the property.

MILWAUKEE.

The Market.

That the month of June is still a favorite time to get married was again proved last week, for work in this line was plentiful and, with quite a lot of funeral work and other odds and ends, the market for last week was kept in a cleaned-up condition. The weather, while not really cool, was cloudy; consequently the supply was about equal to that of last week; but, with a steady demand, nothing was left by evening.

Carnations naturally took a drop in price, after their glorious career during Memorial week, but last week they still held their own. White roses were mostly called for, while the other colors had to take a back seat. The supply of lilies was also greater. With this siege of cloudy weather, stock has held out well, and the quality, considering the time of the year, is worth commenting on.

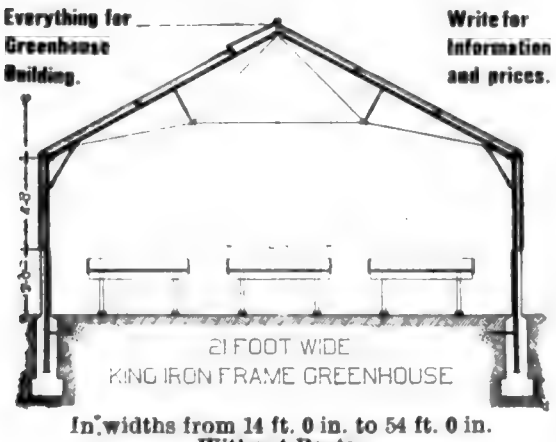
Various Notes.

At the last club meeting, held June 3, the flower show committee reported everything in good shape so far, and the premium list will be out in about two weeks. President C. Dallwig appointed the following members to help the Outdoor Art Association in the task of judging the displays: A. F. Kellner, A. Leidiger, R. Zepnick, M. P. Vallier, B. Gregory and W. Hummel. Three persons made application for membership.

Both C. C. Pollworth Co. and Holton & Hunkel Co. state that business for the month of May this year was more satisfactory than that of a year ago.

Visitors: Christ Lund, Wausau, Wis.; Carl Meier, Green Bay, Wis.; R. Calvert, La Crosse, Wis.; John Benstead, Racine, Wis., and John Evans, Richmond, Ind.

E. O.



RICHMOND, IND.

A portion of the east side range of the E. G. Hill Floral Co. has been removed to the plant in West Richmond. Several greenhouses have already been torn down and removed, and others will be, just as soon as sufficient boiler accommodations can be furnished at the west side plant. It is probable that a few houses will be left at the east end plant, to be used for the growing of stock for retail. The output of the plant on Easthaven avenue will be entirely for wholesale.

MARIETTA, O.—Walter Smith will move his store to the building on Putnam street, near Front street.

Everything for Greenhouse Building.

This Is What Thomas Proctor Thinks

"So far as the style of construction is concerned, I believe that the U-Bar type is as much superior to the very best type of ordinary construction, as the iron frame houses are to the old wooden sash bar houses."

Mr. Proctor, you doubtless know, is superintendent for R. W. Patterson, Lenox, Mass., and year after year walks off with the mum prizes.

U-BAR GREENHOUSES

PIERSON U-BAR CO.

DESIGNERS AND BUILDERS

1 MADISON AVE., NEW YORK

Mention The Review when you write

GREENHOUSE WHITE

Will not chalk, scale or peel. Not affected by dampness, mildew or moisture. A clear, strong white.

John Lucas & Co.

Philadelphia — New York — Chicago — Boston

HEARTLEY'S MOLE TRAP

Pat. July 9, 1901)

PROTECT your LAWN and PLANTS by using HEARTLEY'S HOLD-FAST MOLE TRAP. "It Excells Them All" A trial order will convince you. Write for Prices.

GEO. W. HEARTLEY
No 900 Summit St.,
TOLEDO, - - OHIO.

Always mention the Florists' Review when writing advertisers.

It's the Busy Season Now!

The florist who is thinking of building a greenhouse this summer, will do well to send in his order early. All records for building will be broken during 1909, and all the construction firms will be crowded with work later on. Get your figures now and order early if you do not want to be delayed. Delay means loss of money, and in these days every dollar counts. Send for our new 1909 catalogue—sent anywhere free on request.

JOHN C. MONINGER CO.

MT. STERLING, KY.—Emil Fredrich says that trade has surpassed anything in the history of this town; everything was sold out but the benches. There was an advance in price of some 15 per cent over last year. The best grade of plants sold better than ever before in the history of this town. He thinks it is safe to say that if the florists generally would raise more specimen plants, instead of the overcrowded 5 and 10-cent stock, they could realize at least 35 to 40 per cent more on the same bench space.

ARTHUR T. BODDINGTON, Seedsman, 342 W. 14th St., New York

NOW READY FOR DELIVERY

New Winter-Flowering BEGONIA PRESIDENT TAFT

Awarded Certificate of Merit by Pittsburg and Allegheny Florists' and Gardeners' Club; Newport, R. I., Horticultural Society, and New York Florists' and Gardeners' Club.

This beautiful winter-flowering Begonia originated in our Nurseries about two years ago; it is stronger, sturdier and more beautiful than any of its predecessors. In color it is similar to Begonia Agatha; it is free and continuous flowering from November to April, each flower the size of a silver dollar. Young plants ready for distribution in June. $4.00 per dozen; $25.00 per 100. Orders filled in rotation.

AMERICAN PEONY SOCIETY

THE MEETING AT QUEENS.

An Enjoyable Reunion.

The peony convention of 1909, held at the Cottage Gardens, Queens, L. I., Friday and Saturday, June 11 and 12, was a gratifying success.

In the absence of President Ward, who is at his western headquarters in Michigan, and not in the best of health, the chair was occupied by Prof. John Craig, of Ithaca, who made an ideal presiding officer. He emphasized, in his opening address, the fact that the Peony Society is a working society, its great object being to bring order out of confusion and remedy the unclassified condition that has prevailed.

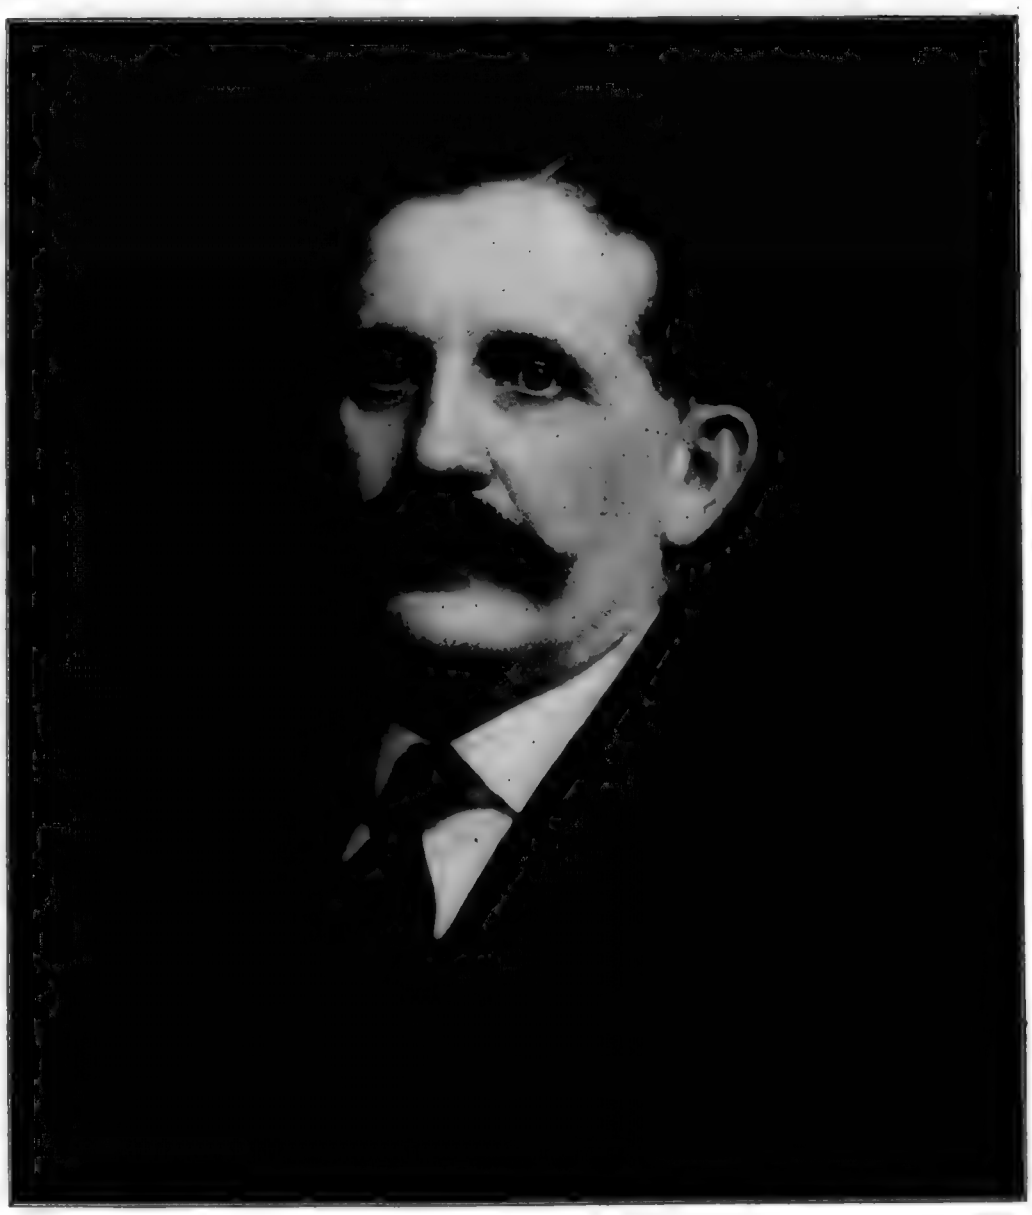
The preliminary meeting on Friday had an attendance of fifteen to twenty members and it was decided to adjourn to 10:30 on Saturday for the regular convention, many being expected from the Rochester Nurserymen's meeting, which did not close until Friday afternoon. Later in the day Prof. Craig decided a special meeting should be called, and again at 4:30 Friday the society convened in the handsome office building provided by the Cottage Gardens Co. for the occasion. Here lunches were served each day, and every comfort supplied by Mrs. Ward and the Cottage Gardens' managers, Messrs. Brown, Dauphin and Matheron. At the Friday afternoon meeting Secretary Fewkes read the report of the meeting at Ithaca in 1908, which was approved. The secretary also read the address of the president, which was as follows:

President Ward's Address.

It is with extreme regret that I am compelled to announce my inability to be with our beloved society at its fourth annual meeting, and to also announce that hereafter I shall be unable to take any laborious part or position with you or any other horticultural body. My connection with and labors among horticulturists have been most agreeable, pleasant and instructive and I would much like to continue them; but the condition of my health during the last year warns me that I must cut off all detail work possible and save my strength for tasks that I cannot avoid. I wish, however, to assure you all that my sympathy and support will always be heartily exerted in aiding all horticultural societies, not only in America but in other lands as well, in the grand works they have undertaken.

The work which the Peony Society was organized to perform has been but fairly begun. Some errors and omissions have likely been made, but these should not discourage you all in continuing the work already planned nor in planning additional work that experience shows to be needful. We all should rather work with renewed vigor and a determination to accomplish all that which we set out to accomplish.

NOMENCLATURE.—With the data at my command I am at this time unable to make many suggestions of value, but the work already mapped out should be continued, to the end that American peony growers should have at least an authentic list of named varieties that will cover a select list of those varieties most desirable for general culture on our continent, and that duplicate names should as far as practicable be eliminated from that list.



Your nomenclature committee should be composed of capable, practical men, who are willing and able to give it the necessary time, observation and attention.

ESSAYS.—There should be provided at each annual meeting two or three able essayists covering subjects of interest to peony growers, both amateur and professional. Among the subjects that will likely prove of interest might be mentioned: Cultivation of the Peony, Propagation of the Peony, Originating New Varieties by Cross Fertilization, Commercial Peony Growing, The Value of the Peony for Cut Flowers, The Peony for the Amateur, The Peony as a Decorative Plant, The Use of the Peony in Landscape Gardening; Peony Colors, pointing out shades of color that are most desirable and those not worthy of cultivation; The Peony at Exhibitions, illustrating best methods for keeping, shipping and staging peony blooms at exhibitions. Other subjects will suggest themselves as time passes.

THE CORNELL EXPERIMENTAL PLOT.—The Cornell experimental work has not proved as successful as might be desired, owing largely to the unfavorable nature of the soil and the lack of continued culture and fertilization, and the condition of the plants at the station is not such as to facilitate a correct study of the varieties or to enable one to judge as to the value of different varieties. Some means should be adopted to provide for proper culture, fertilization and favorable soil conditions, for until the peonies can be observed in fairly favorable conditions, the observations and the deductions therefrom will not likely prove of great general value.

ANNUAL EXHIBITIONS should be held in localities where an attractive and effective exhibition of peony blooms may be assured, and at such seasons as would enable near-by growers to stage fine displays to good advantage.

PREMIUMS. — Substantial premiums should be offered, under such conditions as will attract extensive entries and thereby assure fine displays, and rules and regulations should not be so technical or severe as to discourage or drive away exhibitors.

Charles Willis Ward.
(Absent host and president of the American Peony Society.)

AMERICAN PEONY SOCIETY

THE MEETING AT QUEENS.

An Enjoyable Reunion.

The peony convention of 1909, held at ie Cottage Gardens, Queens, L. I., Fri- ty and Saturday, June 11 and 12, was gratifying success.

In the absence of President Ward, who - at his western headquarters in Michi- an, and not in the best of health, the hair was occupied by Prof. John Craig, f Ithaca, who made an ideal presiding fficer. He emphasized, in his opening ddress, the fact that the Peony Society s a working society, its great object eing to bring order out of confusion and emedy the unclassified condition that has revailed.

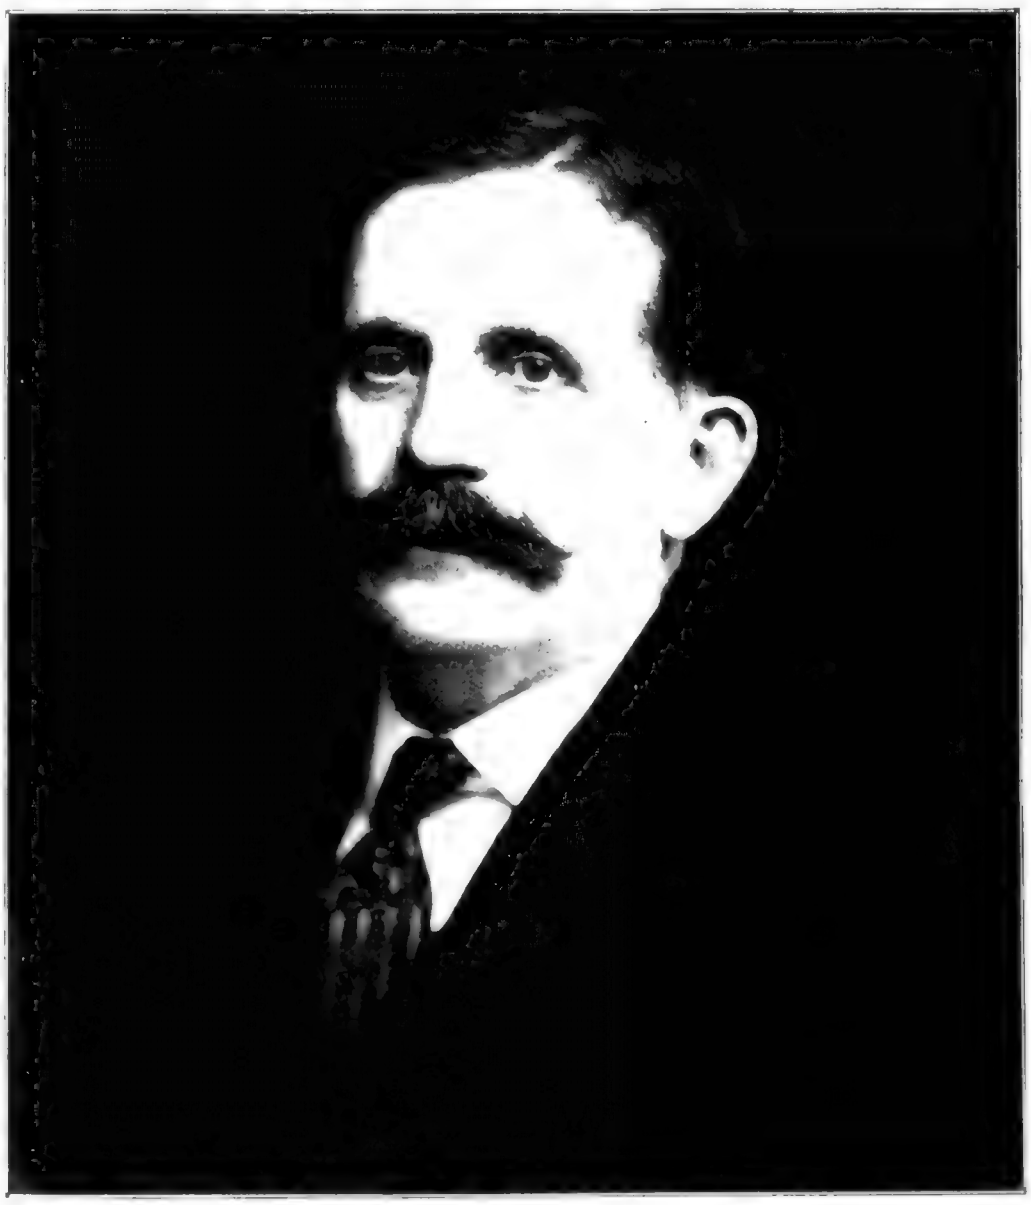
The preliminary meeting on Friday had n attendance of fifteen to twenty mem- ers and it was decided to adjourn to 10:30 on Saturday for the regular con ention, many being expected from the Rochester Nurserymen's meeting, which did not close until Friday afternoon. Later in the day Prof. Craig decided a special meeting should be called, and gain at 4:30 Friday the society con- vened in the handsome office building pro- vided by the Cottage Gardens Co. for the occasion. Here luncheс were served each day, and every comfort supplied by Mrs. Ward and the Cottage Gardens' man- agers, Messrs. Brown, Dauphin and Matheron. At the Friday afternoon meeting Secretary Fewkes read the re port of the meeting at Ithaca in 1908, which was approved. The secretary also read the address of the president, which was as follows:

President Ward's Address.

It is with extreme regret that I am compelled to announce my inability to be with our beloved society at its fourth annual meeting, and to also announce that hereafter I shall be unable to take any laborious part or position with you or any other horticultural body. My con nection with and labors among horticul turists have been most agreeable, pleas ant and instructive and I would much like to continue them; but the condition of my health during the last year warns me that I must cut off all detail work possible and save my strength for tasks that I cannot avoid. I wish, however, to assure you all that my sympathy and support will always be heartily exerted in aiding all horticultural societies, not only in America but in other lands as well, in the grand works they have undertaken.

The work which the Peony Society was organized to perform has been but fairly begun. Some errors and omissions have likely been made, but these should not discourage you all in continuing the work already planned nor in planning addi tional work that experience shows to be needful. We all should rather work with renewed vigor and a determination to ac- complish all that which we set out to accomplish.

NOMENCLATURE.—With the data at my command I am at this time unable to make many suggestions of value, but the work already mapped out should be con- tinued, to the end that American peony growers should have at least an authentic list of named varieties that will cover a select list of those varieties most desir able for general culture on our continent, and that duplicate names should as far as practicable be eliminated from that list.



Your nomenclature committee should be composed of capable, practical men, who are willing and able to give it the neces- sary time, observation and attention.

ESSAYS.—There should be provided at each annual meeting two or three able essayists covering subjects of interest to peony growers, both amateur and profes sional. Among the subjects that will likely prove of interest might be men- tioned: Cultivation of the Peony, Propa gation of the Peony, Originating New Varieties by Cross Fertilization, Commer cial Peony Growing, The Value of the Peony for Cut Flowers, The Peony for the Amateur, The Peony as a Decorative Plant, The Use of the Peony in Land- scape Gardening; Peony Colors, pointing out shades of color that are most desir- able and those not worthy of cultivation; The Peony at Exhibitions, illustrating best methods for keeping, shipping and staging peony blooms at exhibitions. Other subjects will suggest themselves as time passes.

THE CORNELL EXPERIMENTAL PLOT.—The Cornell experimental work has not proved as successful as might be desired, owing largely to the unfavorable nature of the soil and the lack of continued cul- ture and fertilization, and the condition of the plants at the station is not such as to facilitate a correct study of the varieties or to enable one to judge as to the value of different varieties. Some means should be adopted to provide for proper culture, fertilization and favorable soil conditions, for until the peonies can be observed in fairly favorable condi- tions, the observations and the deductions therefrom will not likely prove of great general value.

ANNUAL EXHIBITIONS should be held in localities where an attractive and ef fective exhibition of peony blooms may be assured, and at such seasons as would enable near by growers to stage fine dis- plays to good advantage.

PREMIUMS.—Substantial premiums should be offered, under such conditions as will attract extensive entries and thereby assure fine displays, and rules and regulations should not be so tech- nical or severe as to discourage or drive away exhibitors.

Charles Willis Ward.

(Absent host and president of the American Peony Society.)

Introducing New Varieties. — While the society should encourage the growers of new varieties and give ample recognition to all improvements of merit, it should carefully avoid the endorsement of the commercial value of any new peony, and its awards should be of such a character as would prevent the use of the society's name in advertising worthless varieties or varieties that may be practically duplicates of kinds already existing in commerce.

In conclusion I desire to express my great gratitude to the members of this society for the uniformly kind and courteous treatment they have one and all accorded me, and for the generous assistance all have rendered the society, as well as for the enthusiasm manifested in our work. I feel that I ought to apologize for the little time I have been able to devote to the duties of the office with which you have thrice honored me, and to offer as the only explanation lack of sufficient strength to attend to them properly and at the same time care for the business duties which have crowded upon me and which could not be avoided. I feel certain that any one of your members whom you may choose as my successor will more ably fill the office than I have been able to do, and that under his guidance our society will prosper and accomplish the needed work.

You all have my best wishes for success, collectively and individually, and I desire to express to each and every one of you my warmest friendship and sincerest wishes for a long, successful and happy career.

The address received the thanks of the society, and the regrets of the members present were sent to Mr. Ward, because of his enforced absence, with hopes for his speedy recovery.

Secretary's Report.

The report of Secretary A. H. Fewkes was as follows:

The present membership of the society, not including four honorary members, is fifty-four. We have lost during the year one member by death, E. V. Hallock, who joined the society at the last meeting at Ithaca. Although his membership was of short duration his loss will be keenly felt, for his horticultural attainments and genial personality made him a most valued member.

The work of the nomenclature committee is progressing. The peony bulletin published by Cornell University was issued early in the year and distributed to members. It contained the Coit essay on the peony and a partial descriptive list of varieties. This list forms the beginning of the official catalogue of the society. In his introductory note Professor Craig says: "It is to be regarded as a preliminary step, and therefore subject to modification in the light of future experience." I will therefore say without other authority from the chairman of the nomenclature committee that these descriptions are submitted to you for your approval or criticism both as to method and accuracy. If they do not meet with your approval it is suggested that your objections be communicated direct to Professor Craig or his representative, Leon D. Batchelor, as it is through a frank expression of opinion on these matters that the best results will be obtained.

In connection with the nomenclature work the question suggests itself to me, whether as individual members we are doing all we can to further the work of the committee? It certainly is not enough for us to simply send our collections of roots to Cornell and expect the confusion to be straightened out by the committee there, while we keep on selling and distributing doubtful varieties under the names we happen to have attached to them. We should cease being too confident of the accuracy of our own list of names, unless we have taken extraordinary means for proving them to be correct. For instance, if some of us have invested in the Lady Alexandra Duff gold brick we should not pass it along as the true thing, but sell it upon its own merits, if we are fortunate enough to have received one of the few good ones out of the dozen or more varieties sent here for it; and solve the problem as one member, at least, has done by advertising it as having been received for the true variety, but expressing a doubt of its accuracy, while giving it full credit for quality. There are many other varieties of uncertain identity which should be treated in the same way and if we are to be consistent members of the American Peony Society some such course as the above should be followed.

Another matter which should receive attention at this meeting is the premium list for our exhibitions and the ways and means of providing for it. The exhibitions form an important adjunct to the meetings and some special provisions should be made whereby prizes can be offered and paid without making too heavy demands upon the treasury.

The exhibition at the last meeting at Ithaca was a fairly good one, but was made up principally of flowers cut from the test collections. T. C. Thurlow & Co., West Newbury, Mass., and Prof. A. P. Saunders, Clinton, N. Y., were the only other exhibitors, and great credit is due them for making so good a showing of blooms. The former entered in the commercial, and the latter in the amateur classes.

Other Reports.

Treasurer Humphrey's report showed a balance of $456.89 on hand, the year's expenditures being $83.76. The generosity of the prize winners of last year, in allowing their winnings to revert to the society's treasury, was heartily appreciated.

Prof. Craig, in presenting the report of the nomenclature committee, said the real work of the committee is being done by those in charge of collections of plants sent to Ithaca, and frank criticism of its work was suggested and is desired. Ideal conditions were not sought, he said, but

Peony Festiva Maxima in the Shrubbery.

The Pink Peony M. Jules Elie, From a Photograph Made at the Cottage Gardens.

an average condition without overcultivation or overfertilization.

Mr. Batchelor, of Cornell, gave interesting details of the work being done at Ithaca, the excellent condition of the land for the work of the committee, and the mistakes that had been corrected. Some 200 varieties have been photographed, and this descriptive work is to be extensively continued. He recommended appointing a committee to go to Ithaca and work in conjunction with the officials, emphasizing the great difficulty of one man in accomplishing the needed corrections in nomenclature, the color descriptions, and the form of flowers, all of which he considers necessary in making the committee's work practical and perfect. He advised also the scoring of new varieties, as new carnations are scored before they are introduced to the trade. He referred to the importance of great care in renaming varieties, with dates of introduction, etc. The committee, he said, had some 600 varieties to be passed on and the present season should enable its members to decide upon the names of at least 300 desirable varieties, together with the list of those doubtful and worthless.

F. R. Pierson gave his hearty approval to the suggestions of Mr. Batchelor and moved the appointment of the committee, for which B. H. Farr and Jos. Dauphin were selected. In all, 2,769 lots or samples were sent to Cornell during the last year.

Officers Elected.

Officers were elected as follows:

President—Bertrand H. Farr, Reading, Pa.
Vice-President—C. J. Maloy, Rochester, N. Y.
Secretary—A. H. Fewkes, Newton Highlands, Mass.
Treasurer—J. H. Humphreys, Chestnut Hill, Pa.
Director—Prof. A. P. Saunders, Clinton, N. Y.

The hold-over directors are Geo. C. Thurlow, of West Newbury, Mass., and E. A. Reeves, of Cleveland.

Miscellaneous Matters.

Mr. Farr made a practical address, giving many personal experiences, and emphasizing unselfish and mutual interest and coöperation. J. Wilkinson Elliott's letter of resignation was read and accepted.

Before the adjournment of Friday's meeting Mr. Farr suggested for the next convention the educational advantages of a large city, favoring Philadelphia. At the Saturday meeting, Boston, Reading, Cleveland and Rochester were listed as ideal convention cities, but the selection was left to a committee composed of members representing New England, New York and the West: A. H. Fewkes, R. T. Brown and W. A. Peterson.

The secretary read a letter from J. Capers, of Oakville, Canada, commending the nomenclature committee, and Prof. Craig added his testimony as to its efficiency and faithful effort.

Miss Emma Embray and Messrs. L. H. Horsatt, W. P. Dykes, Henry Hicks and J. J. Starr were elected to membership.

On motion of W. A. Peterson, of Chicago, the expenses of the committee appointed to coöperate with the nomenclature committee at Ithaca, were provided for.

Prof. Craig dilated upon the thorough work being done by Mr. Batchelor; also upon the kindness and liberality of Mr. Ward, and the society in recognition voted unanimously in favor of his honorary membership. Prof. Saunders and Messrs. Bryant and Batchelor were appointed a committee on resolutions, and in their report spoke enthusiastically of Mr. Ward's liberality and the faithful devotion of his representatives, Messrs. Brown and Dauphin.

Wm. A. Peterson spoke for distinct classification and the individuality of color. Messrs. Batchelor and Fewkes also spoke in behalf of this necessity. Mr. Batchelor was elected an honorary member of the society.

At the close of the convention luncheon was served in the big dining-room of the office building of the Cottage Gardens Co. and the new president spoke in grateful appreciation of the honor. Mr. Hallock, uncle of E. V. and former owner of the farm where are now the 100 acres of nursery and the great greenhouse plant of the company, told of his early experiences.

The Exhibition.

The exhibition, outside the stock of the Cottage Gardens, which was not entered for prizes, was meager. At Rochester, Ithaca and in New England the flowers were not ready and at Philadelphia they had passed. Peterson Nursery, Chicago, had no blooms out, so there was practically no competition. G. C. Thurlow, G. A. Bryant and A. H. Fewkes were judges. The awards were:

Largest and best collection of varieties, B. H. Farr first, Geo. H. Peterson second.
Twelve varieties, six of each, G. H. Peterson first, B. H. Farr second.
Collection of flesh-colored varieties, B. H. Farr second, no first.
Collection white varieties, G. H. Peterson first, B. H. Farr second.
Collection crimson varieties, G. H. Peterson first, B. H. Farr second.

Introducing New Varieties. — While the society should encourage the growers of new varieties and give ample recognition to all improvements of merit, it should carefully avoid the endorsement of the commercial value of any new peony, and its awards should be of such a character as would prevent the use of the society's name in advertising worthless varieties or varieties that may be practically duplicates of kinds already existing in commerce.

In conclusion I desire to express my great gratitude to the members of this society for the uniformly kind and courteous treatment they have one and all accorded me, and for the generous assistance all have rendered the society, as well as for the enthusiasm manifested in our work. I feel that I ought to apologize for the little time I have been able to devote to the duties of the office with which you have thrice honored me, and to offer as the only explanation lack of sufficient strength to attend to them properly and at the same time care for the business duties which have crowded upon me and which could not be avoided. I feel certain that any one of your members whom you may choose as my successor will more ably fill the office than I have been able to do, and that under his guidance our society will prosper and accomplish the needed work.

You all have my best wishes for success, collectively and individually, and I desire to express to each and every one of you my warmest friendship and sincerest wishes for a long, successful and happy career.

The address received the thanks of the society, and the regrets of the members present were sent to Mr. Ward, because of his enforced absence, with hopes for his speedy recovery.

Secretary's Report.

The report of Secretary A. H. Fewkes was as follows:

The present membership of the society, not including four honorary members, is fifty-four. We have lost during the year one member by death, E. V. Hallock, who joined the society at the last meeting at Ithaca. Although his membership was of short duration his loss will be keenly felt, for his horticultural attainments and genial personality made him a most valued member.

Peony Festiva Maxima in the Shrubbery.

The work of the nomenclature committee is progressing. The peony bulletin published by Cornell University was issued early in the year and distributed to members. It contained the Coit essay on the peony and a partial descriptive list of varieties. This list forms the beginning of the official catalogue of the society. In his introductory note Professor Craig says: "It is to be regarded as a preliminary step, and therefore subject to modification in the light of future experience." I will therefore say without other authority from the chairman of the nomenclature committee that these descriptions are submitted to you for your approval or criticism both as to method and accuracy. If they do not meet with your approval it is suggested that your objections be communicated direct to Professor Craig or his representative, Leon D. Batchelor, as it is through a frank expression of opinion on these matters that the best results will be obtained.

In connection with the nomenclature work the question suggests itself to me whether as individual members we are doing all we can to further the work of the committee? It certainly is not enough for us to simply send our collections of roots to Cornell and expect the confusion to be straightened out by the committee there, while we keep on selling and distributing doubtful varieties under the names we happen to have attached to them. We should cease being too confident of the accuracy of our own list of names, unless we have taken extraordinary means for proving them to be correct. For instance, if some of us have invested in the Lady Alexandra Duff gold brick we should not pass it along as the true thing, but sell it upon its own merits, if we are fortunate enough to have received one of the few good ones out of the dozen or more varieties sent here for it; and solve the problem as one member, at least, has done by advertising it as having been received for the true variety, but expressing a doubt of its accuracy, while giving it full credit for quality. There are many other varieties of uncertain identity which should be treated in the same way and if we are to be consistent members of the American Peony Society some such course as the above should be followed.

Collection white varieties, G. H. Peterson first, B. H. Farr second.
Collection crimson varieties, G. H. Peterson first, B. H. Farr second.

Collection crimson varieties with stamens, B. H. Farr first.
Collection tricolor varieties, B. H. Farr first, G. H. Peterson second.
Fifty blooms white, S. G. Harris, with Festiva Maxima.
Fifty dark pink, S. G. Harris first.

It was decided to combine in future the classes calling for collection of white and collection of cream white, also the classes for collection of crimsons with and without stamens.

In the classes open only to amateurs, Albert Lahodny, gardener to T. S. Havemeyer, took all the prizes.

Special mention was accorded the peony collections of B. H. Farr and Geo. H. Peterson, and John Lewis Childs for a fine display of iris and lilies. Childs exhibited fifteen varieties of iris, also Amaryllis Johnsoni and liliums.

The peonies of the Cottage Gardens Co. were at their prime and the opportunity of inspecting them was ample recompense for the journey to every peony grower, for the collection is one of the largest in the country. Many of the visitors were nurserymen and found much of interest in the big nursery and in the greenhouses. Every convenience was provided for the conventionists; all trains were met and nothing was left undone by the Cottage Gardens Co. to make the meeting memorable.

THE PEONY.

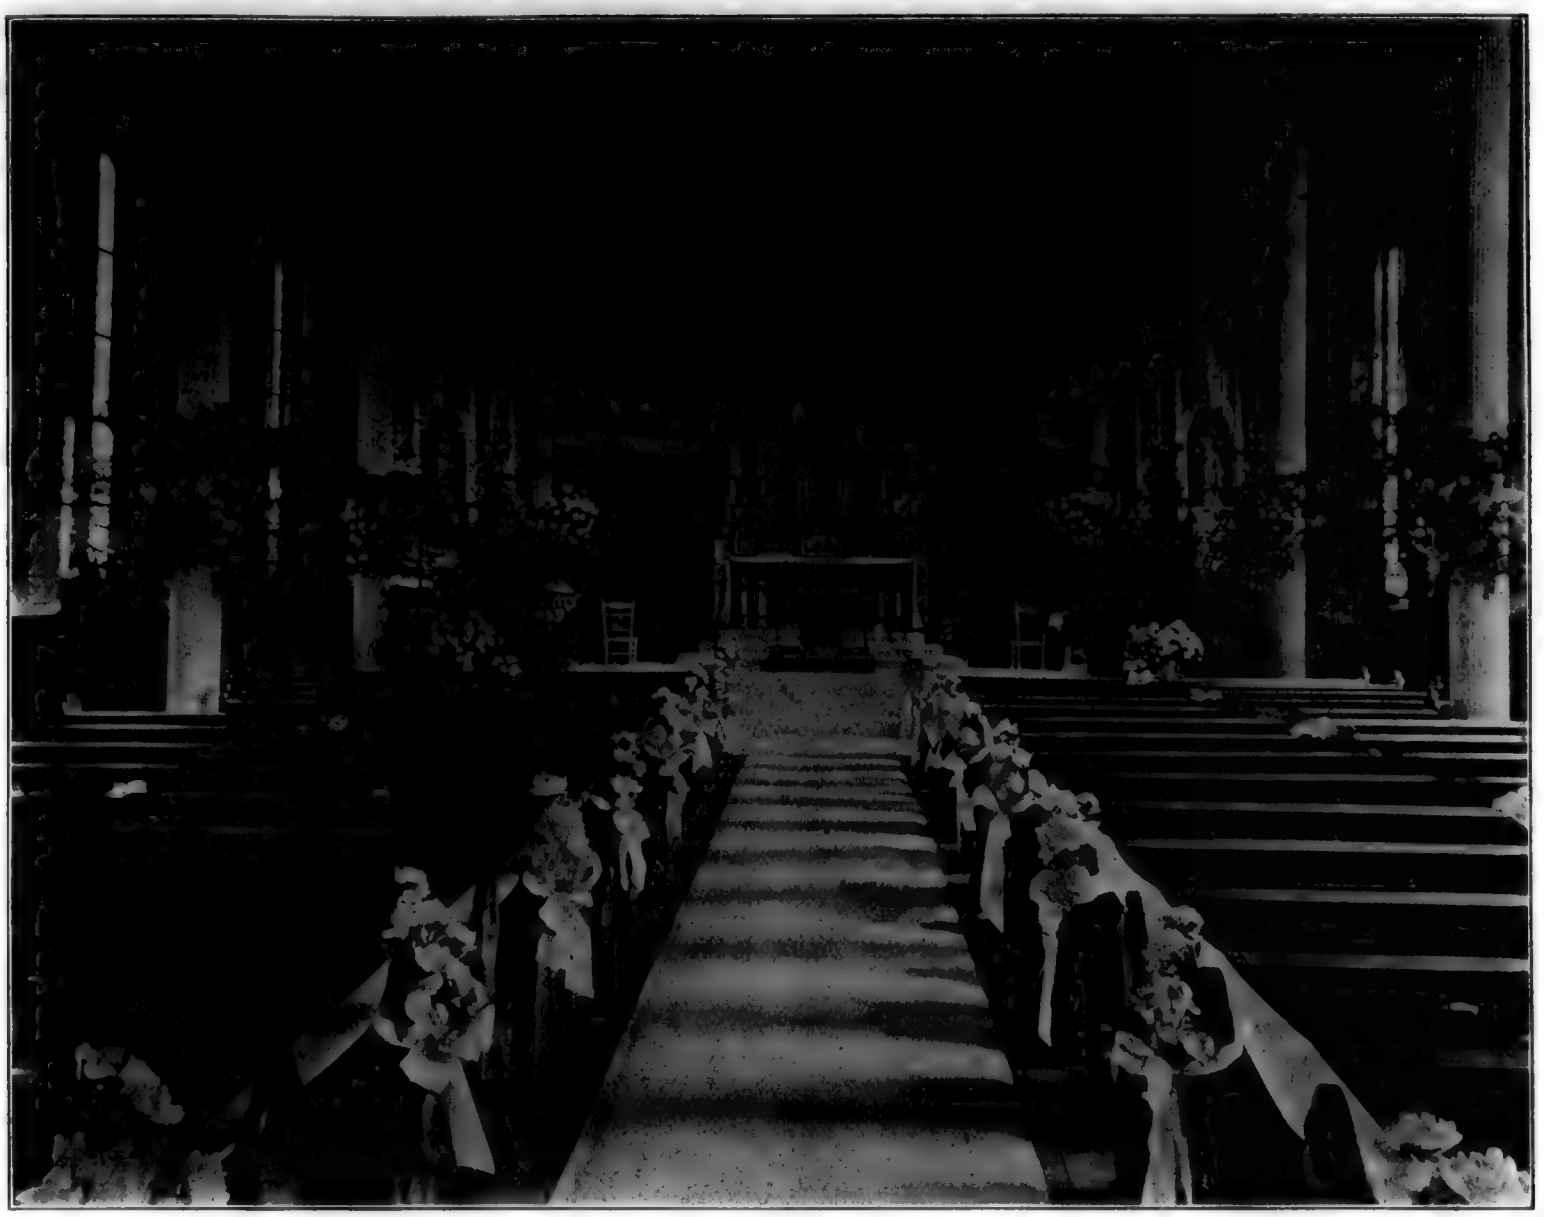
No Boom Bursted

Talk to a Holland nursery salesman and he will tell you the peony boom in America is over. Booms are fine things when they are on the up grade, but when a boom bursts someone gets hurt.

As a matter of fact, there never was a peony boom in America. There was, of course, a measure of awakening to the merits of this wonderful flower, and a greatly augmented demand, which found few American nurserymen prepared with stock. The result was a great increase in the number and size of orders sent to Europe. It does not take many years to work up stock of any popular plant, and that the rush of orders to Europe should have subsided by now is no more than natural. The fact is, however, that the orders sent abroad for peonies are still more numerous and larger than they were before the peony began to be appreciated at its true worth.

That "the boom is 'busted'" is wholly wrong. There are more and more peonies sold each year. The only change is that the number of those able to supply the leading varieties has greatly increased, and with the large increase in the supply of stock there has naturally been a decline in prices.

Public Only Partially Appreciative.



It still would take decimal fractions to state the part of the American flower-buying public that has been aroused to an appreciation of the peony. It is a fact, unbelievable as it may seem, that a good many people of considerable refinement do not even recognize the peony when they see the cut blooms as now sold by capable florists. "Why, what is it?" It is a question heard every now and then where the peony is included among other flowers used at some social function. But there is never failure to recognize it as something beautiful; the better sorts vie with the rose, and it is only a question of time when the use of peonies will be many times as great as it is today, far as the advance already has been. The regular flower buyers already know the peony as one of the handsomest of garden plants and one of the best of decorative cut flowers.

For the Retail Florist.

For the retail florist there is no flower which excels the peony in bold decorative value. Not even the chrysanthemum,

The Peony in the West—Nothing but Peonies in Sight.

A Peony Decoration by W. J. Smyth, Chicago.

queen of the autumn flowers, or the lily, leader of other white flowers for wedding decorations, can compare with the peony where striking effect is to be obtained upon a large scale. In the season of June weddings, when the retail florist most often is called upon to decorate large edifices, there is nothing which can be considered as a rival of the peony. The June wedding decorator would be lost without it. Its colors are so varied as to combine with any setting and the size of the flower not only makes it the best thing on the market in its season, but at the same time its price is so reasonable that it can be used in quantity by those who might not make equal use of other flowers.

For commencement purposes there is no flower in season to compare with the peony, either for the decorations or for presentation bouquets. For funeral purposes nothing the skilled florist can use makes a finer spray than white or light pink peonies, with Sprengeri, and for the money no other flower makes half so good a show. Indeed, there is hardly any place where flowers are used to which the peony is not splendidly adapted, and those retailers who are setting the trade the best example are making good use of the opportunity the flower of June presents.

For Storage and Shipment.

From a wholesaler's point of view the peony is one of the important seasonal crops. It has one advantage over practically every other flower handled in quantity in the wholesale markets: many fine varieties can be cut in bud and stored for weeks without losing salability. The result is that the southern crop is stored to meet the great demand in northern markets for flowers for Memorial day, while the northern crop is stored to meet the requirements of late June, when roses and carnations are on the downward grade. The result is that the peony not only realizes a profitable price to growers, but is available when without it business would be lost. There is no better shipper than the peony when handled rightly.

It was the demand for peony blooms in wholesale markets that gave rise to the principal demand for stock a few years ago. There have been many acres planted for this one purpose. As rapid increase in the production of any other flower would mean that the supply would quickly become unwieldy. With the peony there are none too many of those cut by men who have gone deeper into the subject than the mere spading up of a plot of ground for the roots. The marketing of stock in its best shape is no less important than the growing. Many a grower has lost his profit solely through his carelessness in marketing.

Those florists who grow for their own retail trade find the peony doubly profitable. First, they have the blooms for their cut flower trade; and, second, a well-established plant of any of the better sorts of peony, blooming on a florist's lawn, will invariably make buyers of those who see it—the florist sells the blooms in spring and the roots in autumn.

In the Nursery.

Ten years ago the nurseries that had any considerable stock of peonies could be counted on one's fingers; today there is no nursery of prominence in the line of providing decorative material that does not have its peony department. Both wholesale and retail lists are issued for the mail trade, and the agents add a few peony roots to every order; no customer buying for his home grounds refuses to invest a dollar or two in peonies.

A few years ago the wholesale business was extremely heavy, for nurseries were stocking up. They were cleaning out the common sorts and putting in stock of the new and best old varieties. The wholesale business with the nurseries is now no less than it has been, but it has changed in character. Where formerly the stock was wanted for planting by the purchaser, it now generally is wanted by him for sale again; in a great many cases he already has his orders by ones and twos and dozens when he buys by hundreds and thousands.

In the Landscape.

A use of the peony, which has as yet hardly begun to develop, is in landscape work. For mass effects there is no flower to equal it, and this use will become important as soon as quantities of the best sorts can be had at reasonable figures. Indeed, already prices are where they are not an obstacle to those who appreciate the peony at its true worth for landscape effect. The nomenclature is a matter of importance to the landscape man, because if in his own nursery he has not enough of the variety needed, he wants to know that he will get the identical sort when he orders elsewhere. This matter is gradually being straightened out.

This matter is gradually being straightened out.

(Concluded on page 53.)

THE RETAIL FLORIST.....

WEDDING BOUQUETS.

June is the season of weddings, and a month in which interest naturally attaches to the work called for by these nuptial happenings. To the florist there is no work of greater importance than that which he does for the brides. Many a retailer's reputation rests on his brides' bouquets, and, by the same token, many a florist has fallen from grace because the bride's bouquet lacked grace. Every florist located in a small city or village has had the experience of seeing the city florist come out to do the work when the daughter of the leading citizen was to be married. It was simply because the city florist had a reputation, and one without doubt founded largely on the character of his wedding bouquets.

Bridesmaid's Bouquet.

Anyone can make a bride's bouquet, but not everyone can make them with the light and airy grace demanded by the most discriminating customer. Once upon a time some practical jokers presented an amateur actor friend with a shower bouquet the center of which was a cauliflower bought at a grocery store. Not a few bouquets of valley have been seen made up in the same style nature made that cauliflower; a solid mass of white surrounded with a fringe of green. Don't do it that way. Study the illustrations of brides' bouquets in this issue of the Review. Don't try to copy them, but try to develop your own work along the lines of these bouquets. Keep away from the set-piece style. Work for a loose and graceful arrangement.

The bouquets illustrated are the work of George M. Geraghty, who has charge of the retail store of John H. Dunlop, Toronto. Mr. Geraghty is a past-master in the art of flower arrangement; nothing stiff and formal comes from his hand. He calls this bride's bouquet the Empire shower. The materials are the only things conventional about it. It is made of lily of the valley, white lilac and maidenhair fern. The shower is of crystal net and the ties of satin duchess ribbon and crystal net, with silver tassels to finish the ribbon. In the illustration showing the side of the bouquet it will be noticed how compactly the stems have been gathered into the handle, with a small butterfly bow on the end for a finish.

The beauty of this bouquet lies in its lightness. It is in harmony with the typical bridal costume. It is large, without being heavy; full, without being stiff.

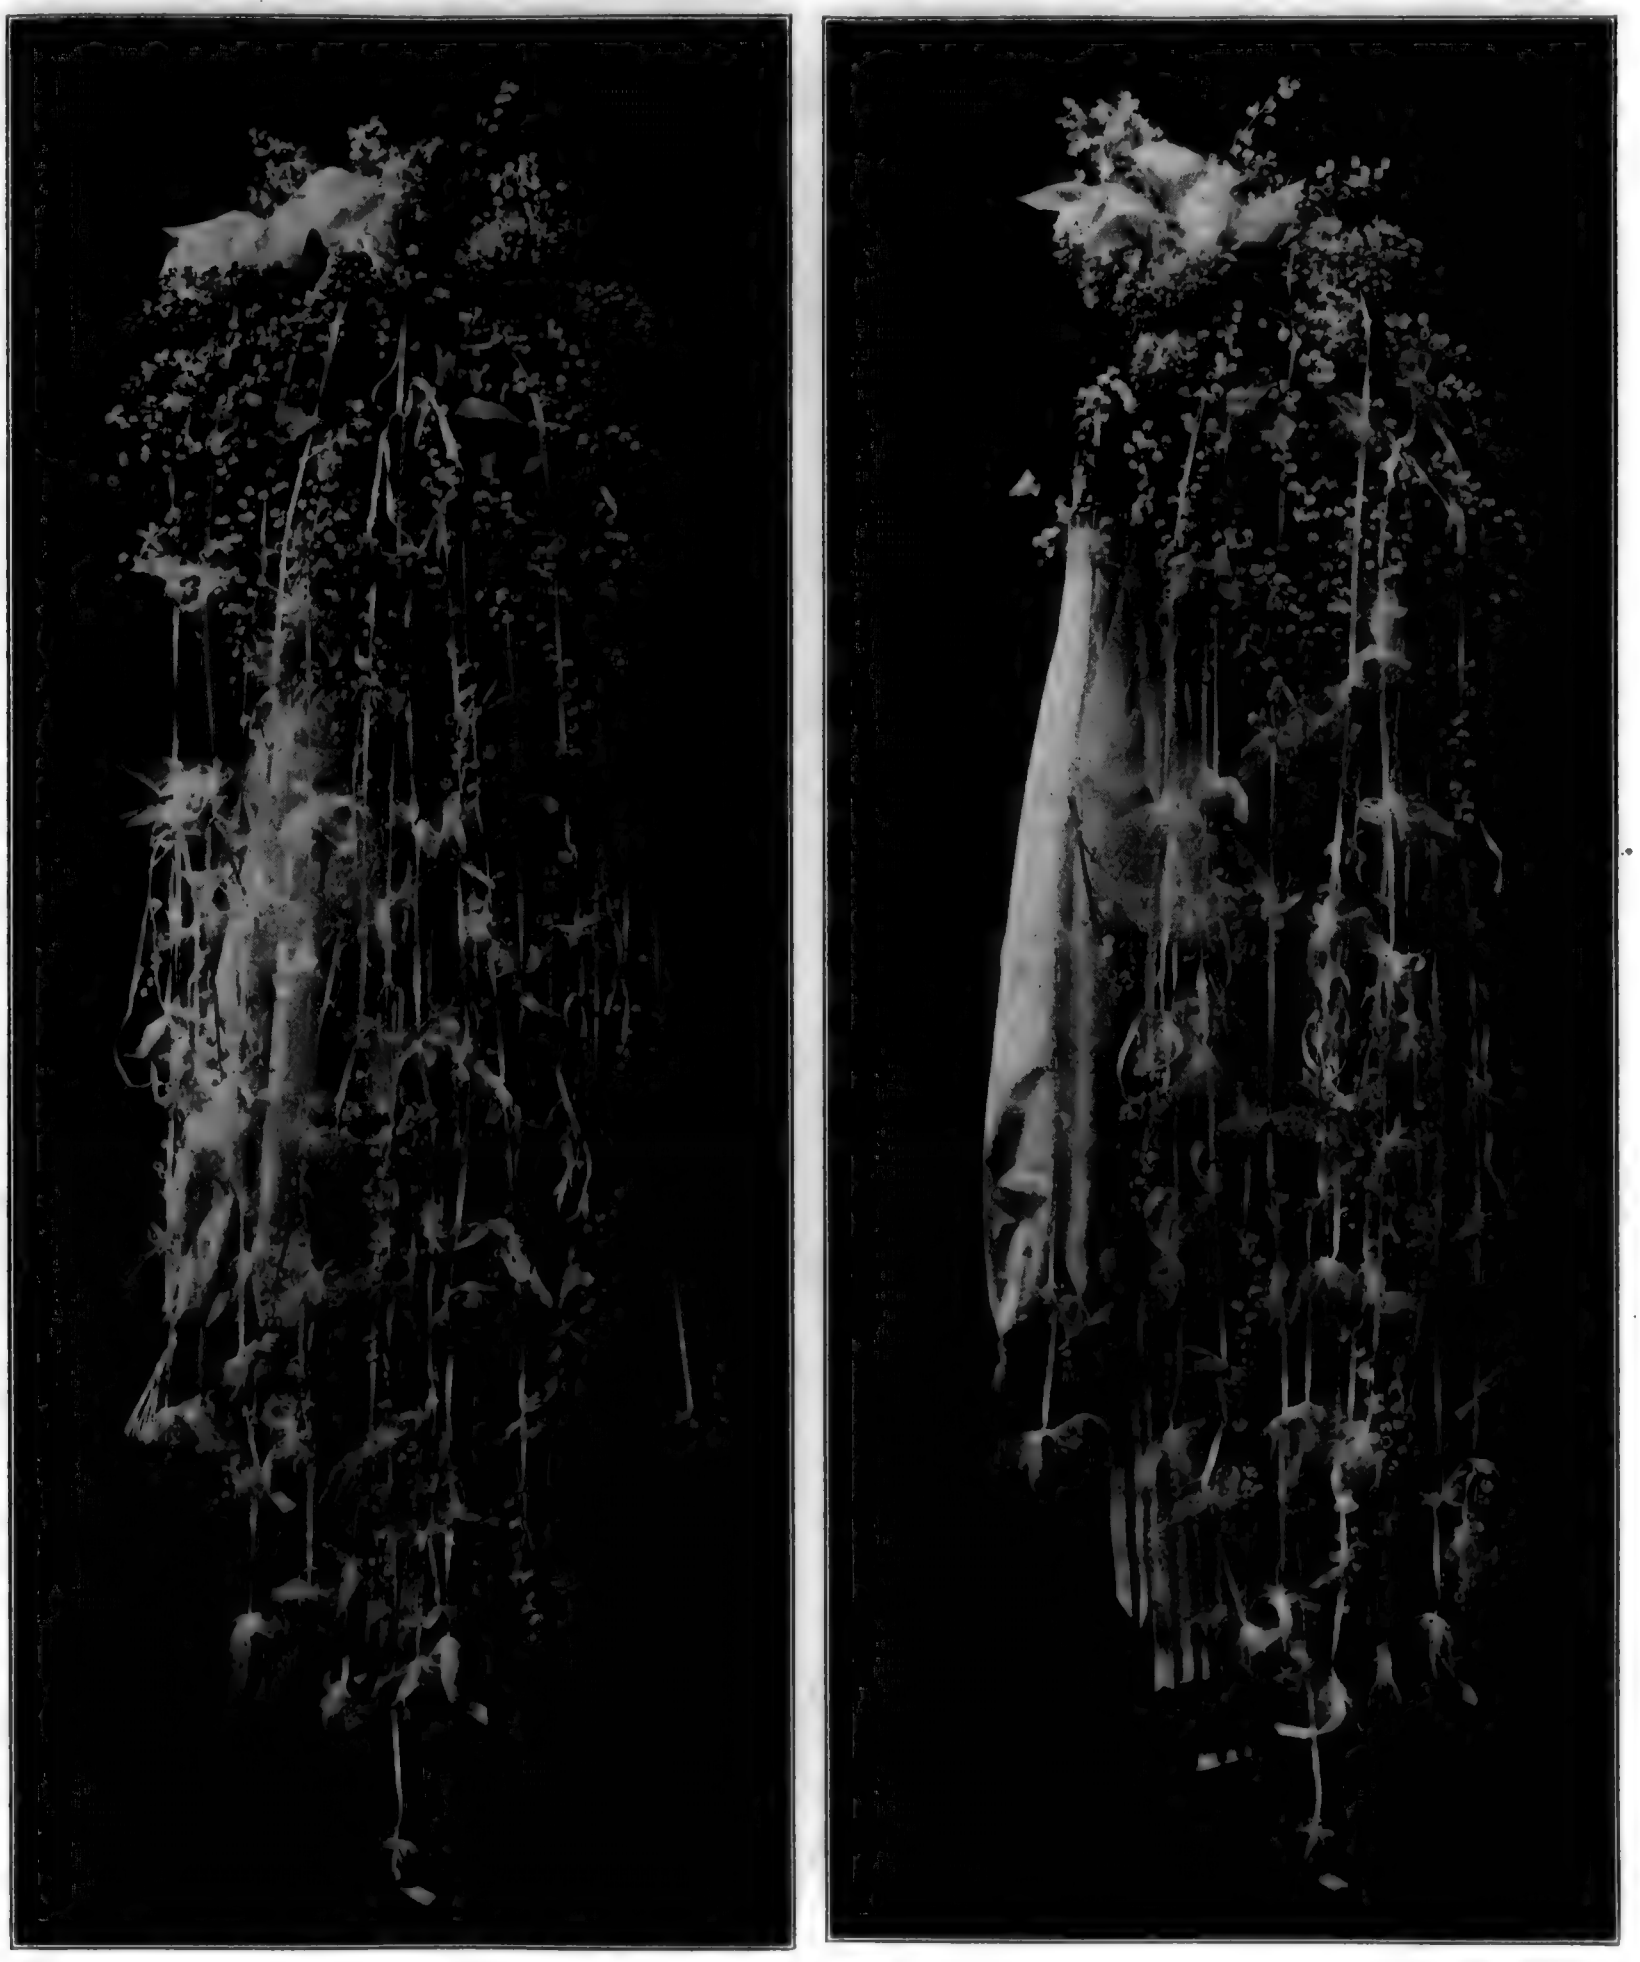
Also reproduced in this issue are two of Mr. Geraghty's bouquets designed for the other participants in the wedding ceremony. The one of sweet peas he designates as his Marie Stuart bouquet. There is nothing like a good name, even if a certain gentleman once asserted that a rose would smell as sweet if called a cabbage, or words to that effect. Mr. Geraghty nose better! At least it wouldn't sell as well.

The Marie Stuart is made of pink sweet peas and maidenhair. Long-stemmed peas are used, in order that they may be not too closely bunched. The bow is of pink ribbon to match the color of the peas. This bouquet is intended either for bridesmaid or matron of honor and where the wedding is a large one, each of the maids gets an identical bouquet. The flower girl gets the shepherd's crook, though sometimes it is preferred to give this to the bridesmaid. The crook illustrated is wrapped with Killarney ribbon and the roses are Killarney, the bow being also the Killarney ribbon. At Dunlop's Mr. Geraghty is busy this month making sets of these bouquets, for their use has become a fad in Toronto.

Fremont, O. — J. Wetzel & Co. are making preparations to open a new store on Justice street, in the Cook block. R. R. Arlin, of Clyde, is associated with Mr. Wetzel.

DIFFICULTIES IN SPRAY MAKING.

Starting the Spray Right.



Beginners usually complain that in trying to arrange a spray the long stems get in their way, and if you look into the trouble you will conclude that they have been trying to choke the poor things by tying them close under the heads and leaving the long stems kicking out behind. The spray should be started on a good foundation of extra foliage. Thus equipped, it is an easy matter to tie the stems to this foundation, at the lower ends of these stems, and as the work proceeds they form a cushion for the newer part of the spray. This also increases the size of the spray by leaving the flowers loose and free on long stems. This plan allows the tip of the spray to be slightly lower than the center and does away with a tiresome evenness on its surface. The shorter stems work in well at the base of the spray or sometimes thrown back over the stem ends.

Wiring the Stems.

In this connection the subject of wir-

The Shepherd's Crook.

Front and Side View of John H. Dunlop's Bride's Bouquet Called the Empire Shower.

ing naturally comes in. The heavy, strong stems need never be wired. The slender ones should always be so strengthened, but should never, through this process, be straightened out of their crooked ways and nice curves. They will find their place in the spray. To prevent the wire from showing, draw it tightly along the stems and do not make more than two or three rounds of the stem.

In planning a long, large spray where stems are a good length, make two sprays and tie them together end for end, not one stem end over the other, but side by side. Work in the extra foliage mostly here, with a good sized tie. If chiffon is to be used, bend two or three flowers into the bow or under the loop, so that the color shows through the chiffon. Sometimes a few fern leaves are caught in the tie, with good effect.

To relieve the evenness of a large spray, lighten by a suggestion of a shower from the stem end, hanging on one or both sides. The bow may hang on one side and the shower on the other. With roses or carnations, sweet peas or valley make good shower material.

A Sign of Poor Workmanship.

Some sprays seen are fastened together with half a pound of wire or a half spool of twine. Two or three strands of wire or a few rounds from a spool ought to tie a spray together securely enough. Poor workmanship is displayed by a too liberal use of these materials. Throw a little extra green over any wired stems that persist in showing.

Neat backed sprays are often met with, but are as often unnecessary. If enough stiff brush is used as a foundation and a good proportion of the flowers used are long-stemmed, the spray ought to hold its own anywhere. Do not consider all stock as lost if the roses drop off the stems. Save the stems and foliage for brush, and this will save extra green, as

Two or three strands of wire or [illegible] tow tourists from a spool is enough to [illegible] spray together securely enough. Poor workmanship is displayed by a too liberal use of these materials. Bruise a little extra green over any wired stems that persist in showing.

Neat looked sprays are often met with, but are as often unnecessary. If enough stiff brush is used as a foundation and a good proportion of the flowers used are long stemmed, the spray ought to hold its own anywhere. Do not consider all stock as lost if the roses drop off the stems. Save the stems and foliage for brush, and this will save extra green as

well as give a better effect than so much foreign green for rose sprays.

Styles in Ties.

To too many people the tie is a matter of no more than a mechanical fraction of the whole. A good spray may be spoiled or a poor one greatly improved by the style of the tie attached to it. With a spray of two kinds of flowers, two colors may be used on the tie, but with hardly as good taste as one of a color corresponding to the lighter of the two kinds of flowers.

Vary the style of tying. Sometimes have two thick puffs, with a long end to each; sometimes a square bow and ends of the same length; sometimes a bunch of loops; sometimes a bunch of ends, all cut; sometimes a bunch of ends and loops, all of different lengths, laid one over the other; sometimes a long end caught up toward the tip of the spray, and the rest of the tie hanging over the stem; sometimes two long ends and no bows; sometimes two ends and one bow; sometimes a knot down toward the end of one streamer.

In using chiffon, never do the actual tying with it. Lay the bow in place, or catch it in place in the fingers, and tie with baby ribbon. Leave the ends of the baby ribbon long enough to tie around the stem of the spray.

Ribbon and chiffon stock should be of large variety and range of colors, but few pieces of each.

To Charge or Not to Charge.

In counting up the profit and loss the question of the cost of green is too often overlooked. To charge or not to charge, that is the question. To charge means to labor with almost every customer to show him the wherefores and the reasonableness of asking him for more money for the same thing than he formerly paid. It is always the better greens that customers want "thrown in," with loose flowers as well as sprays and designs, just because some florist in remote ages, for the sake of gaining trade, invented this method of robbing himself and all succeeding generations. It is as sensible to throw in green with flowers as it would be to sell the green and throw in the flowers.

Along with the charges for green should come a reasonable amount of money for the work, time or skill, whichever one may have a mind to call it. Of course, in a small spray it is difficult to make a respectable showing and get anything for the work. But when the price of the stock used is above $2.50 or $3 there should be an allowance made for work in every spray, grading it according to the size and good appearance of the spray. Gertrude Blair.

SEASONABLE SUGGESTIONS

Smilax.

It is about time to prepare the beds or benches for the young smilax plants. Choose solid beds, if possible. These will give much finer strings than benches. A compost such as you would use for carnations or roses will do well for smilax. Well-rotted cow or horse manure should form one-fourth of the whole. Set the plants out eight inches apart, allowing a foot between the rows. It is unnecessary to have a light house. One which will not grow mums or carnations will answer all right for smilax. Shade the glass with white lead and kerosene. Grow the plants fairly warm, and be sure to get the strings in position without delay. It is necessary to look over the shoots frequently to prevent them becoming entangled.

Asparagus Sprengeri.

Asparagus Sprengeri is indispensable to the country florist. Everyone buying a bunch of flowers expects a few sprays of green, and Sprengeri is generally furnished. Some florists make the mistake of furnishing this free. There is no more reason why Sprengeri should be given away for nothing than Farleyense fern. One costs more to produce than the other, it is true, but customers should not be led to expect that greenery can be furnished for nothing, for it costs money to grow it, as well as flowers.

Asparagus Sprengeri grows well in beds, benches, boxes and baskets. Narrow boxes six inches deep along the sides of benches are often utilized for them, and in these they will do well. Wire baskets a foot in diameter are first-class in every way, and help out the supply where bench space is limited. This asparagus enjoys a generous soil. It needs little shade, but an abundant water supply. Scale sometimes attacks the shoots when left to flower and produce berries, but by using a spray nozzle on the hose, this is easily kept in check.

In pulling out any old stock, try the plan of planting outdoors. They will give a fine lot of serviceable shoots before cold weather.

Asters.

It is time to make a late sowing of asters. For this purpose, such varieties as Mignon Victoria, Chrysanthemum and Queen of the Market are suitable. Comet, Ostrich Feather and Semple's should have been sown before now. These later sorts are beautiful, but lack the substance in the petals of some others, spotting quite badly during a spell of damp, warm weather.

The main batch for late summer or fall blooming should be planted out as soon as possible. The ground should previously have been well manured, plowed and harrowed, as asters want rich soil to do themselves justice. Choose damp, cloudy weather for planting out the stock in the field, and once it is set out, keep the surface soil well tickled with the cultivator.

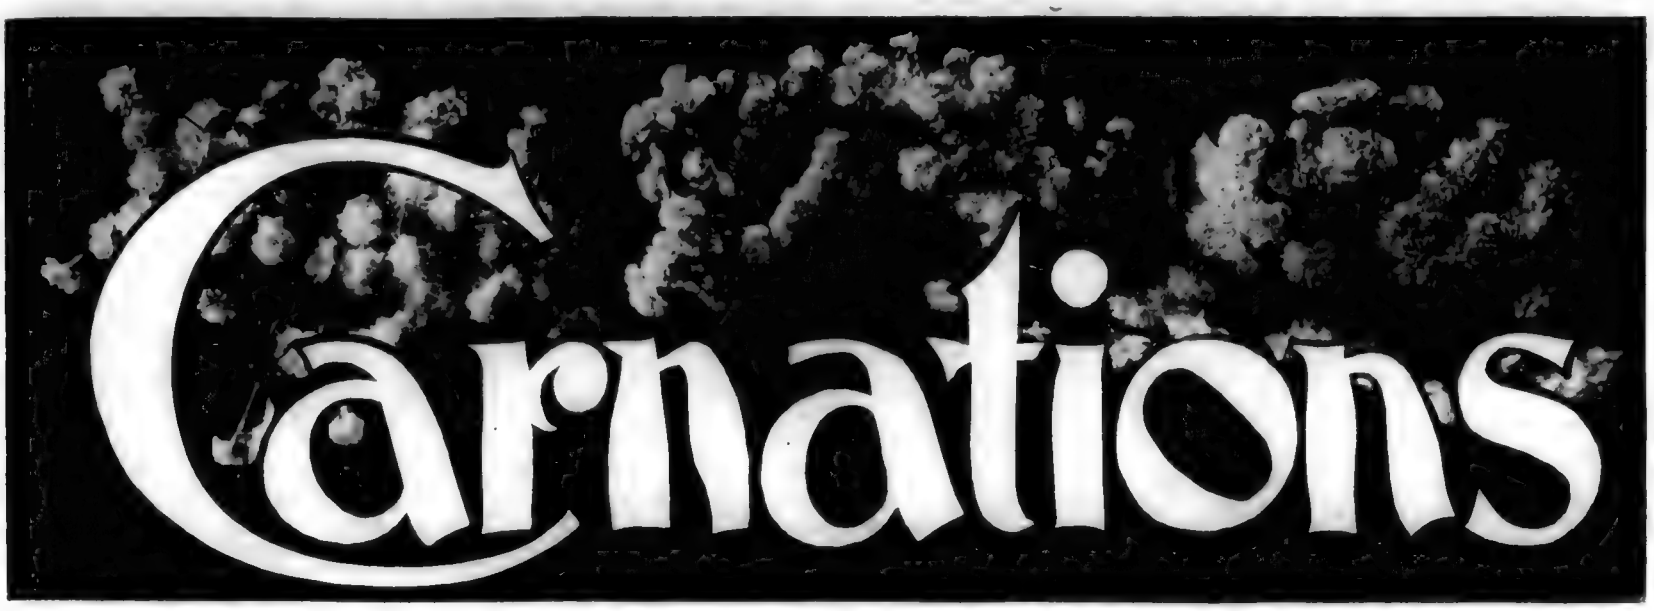
The earliest batch of asters should now be running up for flower. Queen of the Earlies remains the best of this class. Its free branching habit, long stems and floriferousness are all strong points in its favor, although the individual blooms are less fancy than Comet or Semple's. So far, the present season has been particularly favorable for asters over a wide section of the country, comparatively cool weather with frequent showers being exactly to their liking. If cutworms are troublesome, lay a poisoned mash of shorts (bran), molasses, and Paris green, dropping a little here and there where they have made their presence felt.

Lilies.

The demand for lilies is not great during the summer months; especially is this true of the longiflorums, there being a preference given to the speciosums during the hot months. Bulbs potted in late fall should give a succession of flowers for the next two months. The most generally useful is L. speciosum album, the flowers of which are fine for design work. Grown under glass, they are also larger and purer than the out door stock. One advantage of growing a good number of these lilies in pots is that it is easy to advance or retard them. L. auratum possesses too heavy an odor to be popular. In pots it flowers earlier than L. speciosum. It has some call in the markets, but its big, handsome flowers are not used in floral designs much, on account of its heavy perfume.

Where a succession of lilies is wanted during the fall months, it is now time to procure and pot up some retarded bulbs of longiflorum and speciosum album. It is a little too early to start bulbs for Christmas, but for October and November flowering they should be started now. Stand the plants in a cool frame or pit. Give one good watering. Scatter some leaves or moss over them. Keep them where the sun will not strike them, and where temperatures do not fluctuate much. Keep on the dry side until the pots are well filled with roots.

Show Pelargoniums.



As the pelargonium plants pass out of bloom they can be stood outdoors in full sunshine. The water supply can be gradually reduced, and as the wood hardens the pots can be laid on their sides. Cuttings can be taken now, but most growers prefer to wait until the latter part of July; when pruning back the plants, plenty of suitable propagating material can be had.

Greenhouse Repairs.

Now is the time to start on any necessary painting and glazing about the houses and frames. Do not wait until the first chilly nights remind you of what you ought to have done long before. Any piping or alterations in the heating plant should be attended to during the warm months, when fire heat is in the main entirely dispensed with.

All florists are entitled to some vacation during the summer months, when business is at the lowest ebb. Even if you cannot get as far away as the S. A. F. convention, try to take your wife and family to some quiet spot for a week or two of rest. Too many of us are prone to work at the mill all the time. This is not as a rule a necessity. A little change will do each and all lots of good. Push ahead the repairs now, and plan to get away when they are completed.

Holly, Mich.—H. J. Green is improving and enlarging his greenhouses on North Saginaw street.

CARNATION NOTES.—EAST.

Size of Plants.

My statement in the REVIEW of June 10, that the size of plants is of secondary importance when housing in July, was not intended to imply that large size is the first requisite in the selection of stock for later plantings. Vigor and freedom from disease always come first. Given the choice between heavy plants and those of medium size, we would choose the latter every time, and if these were not equal in point of health to a still smaller size we would pass both heavy and medium.

What is true in transplanting young specimens of any plant is equally true in the case of carnations; they can be handled more rapidly, with less breakage of shoots and with less difficulty in maintaining an upright position in the soil, than when large. But of still greater importance is the fact that the smaller plant becomes more quickly established and, in completing its growth under glass, attains a certain degree of permanence, which enables it to better withstand the strain of winter forcing.

Proved by Experience.

There is no element of theory in the above; almost invariably have we experienced the greater percentage of loss by stem-rot among the larger plants, and while it is true that they can be allowed to bloom earlier, this proves of no advantage in the long run.

Some growers seem to think the carnation should not be housed until the plants are of large size, and then many times we see them lifted with a crop of buds, these being allowed to develop. This is entirely wrong if the best results are anticipated, as it is too late when plants reach this stage for most varieties to get well settled in their new quarters before cold weather. Then, if brought in with buds and allowed to make bloom at once, much energy which should go to effect reëstablishment is consumed in developing practically worthless flowers.

GEO. S. OSBORN.

FEEDING IN THE FIELD.

I had to put my carnation plants outside in poor and shallow soil this year, and am afraid they will not make much growth. May I feed them with sheep manure, wood ashes or other fertilizer with beneficial results?

I understand that some government experts have been experimenting on carnations with various fertilizers. Can I get any definite data anywhere? I believe the fertilizers were added to the soil previous to the plants being housed.

J. M.

Unless the soil on which the plants are growing in the field is exceedingly poor, I would not advise you to feed them much in the field now. If you get fair-sized plants by housing time, and well matured, they will be better than large, soft plants. However, if you think it desirable to fertilize some, you can give them some sheep manure or cattle manure, well broken up. In either case I would put on only enough so that the cultivator can be used to stir it into the soil. Don't put on enough to make a mulch, as in your northern climate it would prevent proper maturing of the growth next month. The shredded cattle manure which is now sold and used quite extensively would perhaps prove better than the green material, as it could be worked into the soil more easily with the cultivator.

Experiments with fertilizers were conducted at the U. S. Experiment Station at Washington two years ago, and you can get what information you want from there. Address your inquiry in care of the Department of Agriculture, Washington, D. C. A. F. J. B.

HEIGHT OF SOLID BEDS.

I am putting solid beds into one house this season and have been reading up back numbers of the REVIEW on the subject, but should like to know if it is quite immaterial whether the beds are twelve or eighteen inches high. As I will have to buy filling, would cinders such as are got from the railroads be all right, or can you suggest something better?

J. M.

It is quite immaterial whether your beds are twelve or eighteen inches high, as long as the soil underneath will allow the water to drain away properly. It will be somewhat easier to work the beds if they are eighteen inches high, and therefore we prefer that height. If you have trouble in getting enough filling material, why not build them twelve inches high now and when you can get more material, get it, and the next time you replant add another six inches? If you put in concrete sides this will not be practical, but with board sides it will be simple enough. Cinders such as you mention make good filling material, but do not use them too fresh, as sometimes they retain considerable sulphur. We use the cinders from our own boilers. A. F. J. B.

CYPRIPEDIUM INSIGNE.

Still Remains a Leader.

An English gardening journal recently offered a prize for a popular essay on the best six orchids. The winner selected the following: Cattleya Trianæ, Cœlogyne cristata, Cypripedium insigne, Calanthe Veitchii, Dendrobium nobile and Odontoglossum crispum. The selection is an excellent one. The last named, which is unquestionably the finest orchid in cultivation, is unfortunately a hard proposition in America, owing to our hot summers. In spite of the host of valuable and beautiful cypripediums raised of late years, C. insigne still stands head and shoulders above all others as a commercial variety. Lasting, as the flowers do, for several months, flowering during the darkest part of the year and with a freedom unequaled by any other cypripedieæ, it is not surprising that C. insigne still remains a leader in its class.

A native of Nepaul and in cultivation for nearly a century, C. insigne has given us a host of beautiful forms, the

well as give a better effect than so much foreign green for rose sprays.

Styles in Ties.

To too many people the tie is a matter of no more than a mechanical fraction of the whole. A good spray may be spoiled or a poor one greatly improved by the style of the tie attached to it. With a spray of two kinds of flowers, two colors may be used on the tie, but with hardly as good taste as one of a color corresponding to the lighter of the two kinds of flowers.

Vary the style of tying. Sometimes have two thick puffs, with a long end to each; sometimes a square bow and ends of the same length; sometimes a bunch of loops; sometimes a bunch of ends, all cut; sometimes a bunch of ends and loops, all of different lengths, laid one over the other; sometimes a long end caught up toward the tip of the spray, and the rest of the tie hanging over the stem; sometimes two long ends and no bows; sometimes two ends and one bow; sometimes a knot down toward the end of one streamer.

In using chiffon, never do the actual tying with it. Lay the bow in place, or catch it in place in the fingers, and tie with baby ribbon. Leave the ends of the baby ribbon long enough to tie around the stem of the spray.

Ribbon and chiffon stock should be of large variety and range of colors, but few pieces of each.

To Charge or Not to Charge.

In counting up the profit and loss the question of the cost of green is too often overlooked. To charge or not to charge, that is the question. To charge means to labor with almost every customer to show him the wherefores and the reasonableness of asking him for more money for the same thing than he formerly paid. It is always the better greens that customers want "thrown in," with loose flowers as well as sprays and designs, just because some florist in remote ages, for the sake of gaining trade, invented this method of robbing himself and all succeeding generations. It is as sensible to throw in green with flowers as it would be to sell the green and throw in the flowers.

Along with the charges for green should come a reasonable amount of money for the work, time or skill, whichever one may have a mind to call it. Of course, in a small spray it is difficult to make a respectable showing and get anything for the work. But when the price of the stock used is above $2.50 or $3 there should be an allowance made for work in every spray, grading it according to the size and good appearance of the spray.

GERTRUDE BLAIR.

SEASONABLE SUGGESTIONS

Smilax.

It is about time to prepare the beds or benches for the young smilax plants. Choose solid beds, if possible. These will give much finer strings than benches. A compost such as you would use for carnations or roses will do well for smilax. Well-rotted cow or horse manure should form one fourth of the whole. Set the plants out eight inches apart, allowing a foot between the rows. It is unnecessary to have a light house. One which will not grow mums or carnations will answer all right for smilax. Shade the glass with white lead and kerosene. Grow the plants fairly warm, and be sure to get the strings in position without delay. It is necessary to look over the shoots frequently to prevent them becoming entangled.

Asparagus Sprengeri.

Asparagus Sprengeri is indispensable to the country florist. Everyone buying a bunch of flowers expects a few sprays of green, and Sprengeri is generally furnished. Some florists make the mistake of furnishing this free. There is no more reason why Sprengeri should be given away for nothing than Farleyense fern. One costs more to produce than the other, it is true, but customers should not be led to expect that greenery can be furnished for nothing, for it costs money to grow it, as well as flowers.

Asparagus Sprengeri grows well in beds, benches, boxes and baskets. Narrow boxes six inches deep along the sides of benches are often utilized for them, and in these they will do well. Wire baskets a foot in diameter are first-class in every way, and help out the supply where bench space is limited. This asparagus enjoys a generous soil. It needs little shade, but an abundant water supply. Scale sometimes attacks the shoots when left to flower and produce berries, but by using a spray nozzle on the hose, this is easily kept in check.

In pulling out any old stock, try the plan of planting outdoors. They will give a fine lot of serviceable shoots before cold weather.

Asters.

It is time to make a late sowing of asters. For this purpose, such varieties as Mignon Victoria, Chrysanthemum and Queen of the Market are suitable. Comet, Ostrich Feather and Semple's should have been sown before now. These later sorts are beautiful, but lack the substance in the petals of some others, spotting quite badly during a spell of damp, warm weather.

The main batch for late summer or fall blooming should be planted out as soon as possible. The ground should previously have been well manured, plowed and harrowed, as asters want rich soil to do themselves justice. Choose damp, cloudy weather for planting out the stock in the field, and once it is set out, keep the surface soil well tickled with the cultivator.

The earliest batch of asters should now be running up for flower. Queen of the Earlies remains the best of this cla Its free branching habit, long stems a floriferousness are all strong points in favor, although the individual blooms a less fancy than Comet or Semple's. far, the present season has been parti larly favorable for asters over a wi section of the country, comparativ cool weather with frequent showers bei exactly to their liking. If cutworms a troublesome, lay a poisoned mash shorts (bran), molasses, and Paris gre dropping a little here and there wh they have made their presence felt.

Lilies.

The demand for lilies is not great d ing the summer months; especially this true of the longiflorums, there bei a preference given to the speciosu during the hot months. Bulbs potted late fall should give a succession flowers for the next two months. T most generally useful is L. speciosu album, the flowers of which are fine f design work. Grown under glass, th are also larger and purer than the ou door stock. One advantage of growin a good number of these lilies in pots that it is easy to advance or retard them L. auratum possesses too heavy an odo to be popular. In pots it flowers earli than L. speciosum. It has some call i the markets, but its big, handsom flowers are not used in floral design much, on account of its heavy perfum

Where a succession of lilies is want during the fall months, it is now time procure and pot up some retarded bulb of longiflorum and speciosum album. is a little too early to start bulbs f Christmas, but for October and Novem ber flowering they should be started now Stand the plants in a cool frame or pi Give one good watering. Scatter som leaves or moss over them. Keep the where the sun will not strike them, an where temperatures do not fluctuat much. Keep on the dry side until th pots are well filled with roots.

Show Pelargoniums.

As the pelargonium plants pass out bloom they can be stood outdoors in fu sunshine. The water supply can be grad ually reduced, and as the wood harden the pots can be laid on their sides. Cu tings can be taken now, but most growe prefer to wait until the latter part July; when pruning back the plants plenty of suitable propagating materi can be had.

Greenhouse Repairs.

Now is the time to start on any neces sary painting and glazing about th houses and frames. Do not wait unt the first chilly nights remind you of wha you ought to have done long before. An piping or alterations in the heating plan should be attended to during the war months, when fire heat is in the mai entirely dispensed with.

All florists are entitled to some vac tion during the summer months, wh business is at the lowest ebb. Even you cannot get as far away as the S. A F. convention, try to take your wi and family to some quiet spot for week or two of rest. Too many of us a prone to work at the mill all the tim This is not as a rule a necessity. A litt change will do each and all lots of goo Push ahead the repairs now, and pla to get away when they are completed.

CYPRIPEDIUM INSIGNE.

Still Remains a Leader.

An English gardening journal recently offered a prize for a popular essay on the best six orchids. The winner selected the following: Cattleya Trianæ, Cœlogyne cristata, Cypripedium insigne, Calanthe Veitchii, Dendrobium nobile and Odontoglossum crispum. The selection is an excellent one. The last named, which is unquestionably the finest orchid in cultivation, is unfortunately a hard proposition in America, owing to our hot summers. In spite of the host of valuable and beautiful cypripediums raised of late years, C. insigne still stands head and shoulders above all others as a commercial variety. Lasting, as the flowers do, for several months, flowering during the darkest part of the year and with a freedom unequaled by any other cypripedium, it is not surprising that C. insigne still remains a leader in its class.

A native of Nepaul and in cultivation for nearly a century, C. insigne has given us a host of beautiful forms, the

yellow varieties alone numbering over thirty. Some day we may expect to see these grown by the houseful for market, but in the meantime we can afford to hang on to the parent type.

Its Culture.

Coming from a warm country, this cypripedium does well grown in either a warm or cool house. In summer a cool north house, or even a coldframe where the plants can be close to the light, suits them to a nicety. We have seen splendid specimens kept outdoors under overhanging branches of trees. Unlike cattleyas, the cypripediums, like most of the other terrestrial orchids, need an abundant water supply all the growing season, and in hot weather they will need a thorough soaking each day if the pots are filled with roots. When well established, water once in ten days with weak cow manure water, but do not use any chemicals. The plants will enjoy a syringing every warm afternoon.

It is doubtful if any other orchid pays much better for space occupied and care bestowed on it than C. insigne. Allowing only twelve blooms to each 6-inch pot, at the rate of 10 cents per bloom they yield a good profit, and as they increase in size rapidly their value cannot be estimated merely by flowers sold.

This lady's slipper does well in either fibrous loam or a mixture of loam and fern fiber. It grows only moderately in pure fern fiber. Some moss can be used among the loam in potting. This work cannot be done now, but in February or March. As a general thing, a night temperature of 55 to 60 degrees will be found to suit C. insigne well. The yellow forms seem to like a slightly higher temperature.

ADIANTUMS.

This is the time of rapid growth with all ferns, and with a cessation of the rush incidental to bedding out, planting mums and similar seasonable duties, it is well to give the ferns a little attention. The adiantums do not succeed well in a bright house. The fronds when so grown are pale in color and undesirable. If a house well shaded can be set apart for their culture during the warm months, where they can be fairly close to the glass, they will produce a wealth of fine fronds. Pots well filled with roots will need some liquid manure once a week. Let the doses be rather weak, and if some soot is used in the water it will assist in keeping the fronds a fine dark color.

If greenhouse space is limited and a suitable place cannot be given them, coldframes can be called into requisition. Give the sashes a good coating of whitewash (kerosene and white lead is suitable), dig out the loam so as to give the plants sufficient head room, spread a layer of coal ashes to stand the pots on and, if snails are in evidence, give a dusting of air-slaked lime in addition. You will find that your ferns will grow faster and stockier than in a dark greenhouse, and be fine plants by the middle of September, if carefully tended.

Not only adiantums, but many other ferns can be similarly grown in summer. It is surprising that more frames are not utilized in this way in summer, instead of being allowed to lie idle and grow up with weeds. The successful commercial man never wants to see any houses or frames unoccupied any longer than bare necessity requires.

.....BUSINESS AND OTHER NOTES.....

Dover, N. H.—Charles L. Howe had a large extra force of men employed at his Garrison Hill greenhouses preparatory to the Memorial day rush.

Rochester, N. Y.—The Florists' Club, in a letter signed by its secretary, H. B. Stringer, has accepted Mayor Edgerton's invitation to hold its flower show in Convention hall, November 2 to 4.

Dover, Me.—At the Park Street Greenhouses Mr. Genthner had the finest crop of carnations he ever has been able to cut, just right for Memorial day. He is doing an excellent business this spring.

Joliet, Ill.—The Joliet Republican printed a Memorial day section in red and blue, and Albert C. Rott and Joseph Labo took advantage of the opportunity to publish attractive advertisements in colors.

Pueblo, Colo.—G. Fleischer, not content with the business at store and greenhouses, just before Decoration day put a full assortment of bedding plants at Roselawn cemetery, where a large trade was done.

Wyomissing, Pa.—B. H. Farr, of the Wyomissing Nursery, invited the public, June 8, to view his peony garden, and he and his employees devoted the day to showing the visitors about the place. The garden covers five acres.

Neenah, Wis.—Louis Otto says that trade for Decoration day was fine, though the quality of the stock was somewhat poor. Some excellent peonies were shipped in. Cape jasmine could not be had, on account of its lateness.

Belfast, Me.—W. E. Hamilton has lately passed through one of the busiest periods that he has known in his twenty-five years of business. In addition to Decoration day work and general trade, he has handled an unusual number of funeral orders.

Freeport, Ill.—Louis Bauscher has turned his business into a corporation, application for a certificate having been filed at Springfield June 9. The capital stock is to be $25,000. Three new houses are to be erected, using Garland gutter and truss construction with Moninger mill work.

Des Moines, Ia.—The J. S. Wilson Floral Co. says that trade for Decoration day was double the record of the establishment for last year, and Mr. Wilson states that from what he can learn among the other florists of the town the business everywhere was far ahead of any previous year. Trade in general all through the month of May was away ahead of last year.

Worcester, Mass.—The local florists say their plants and flowers have grown better this spring than last, and that they had a larger stock on hand with which to meet the Decoration day demand. But they say the demand was larger than that of last year; hence there was more of a shortage at the last minute than had been expected. Many orders were only taken conditionally and it was necessary to have much of the stock shipped in from Boston.

Rhinebeck, N. Y.—Frank Marquet is building a greenhouse on Chestnut street.

New Castle, Ind.—The illness of Herbert Heller has taken a turn for the worse, and his recovery is despaired of.

Bar Harbor, Me.—The Main street flower store of the Mount Desert Nurseries was opened for the summer on Monday, May 31.

Eliot, Me.—W. L. Fernald, the nurseryman, had a lively business during the last week or two of May, shipping his stock by the carload.

Jersey City, N. J.—John T. Withers is chairman of the committee on arrangements for the dedication of the Zabriskie playground June 19.

Tillsonburg, Ont.—Mrs. Wm. Rusling announces that the marriage of her daughter, Nellie May, and William L. Lindsay will take place June 30.

Hancock, Mich.—At the greenhouses and store of the A. M. York estate, extensive and systematic preparations were made for the Decoration day trade and a most satisfactory business was done.

Albion, Mich.—M. & S. L. Dysinger's stock of blooming plants was in unusually good condition this season, and their Decoration day sales were the best in their experience. Trade has also continued good since then.

Loda, Ill.—Addems, Morgan & Co. had a heavy business last month, disposing of thirty per cent more bedding plants than in May, 1908. They have also had a large increase in cut flower trade as compared with last year.

Hartford, Conn.—J. F. Huss presided at a meeting of the Connecticut Horticultural Society, June 11. The society has secured Unity hall for a dahlia show September 23, and contemplates securing Putnam Phalanx hall for a chrysanthemum show November 3 and 4.

Naperville, Ill.—Charles F. Rohr says there has been an unusually heavy business here in bedding plants. Everything salable in that line was gone a week before Memorial day. He estimates that his trade in May was about thirty per cent greater than in the same month of 1908.

Hamilton, Can.—Trade has been brisk in bedding plants. Store and funeral work have been quiet for the last few weeks. The Cannon Floral Co. disposed of all its bedding stuff at wholesale. The Vossen Floral Co. sold about 8,000 geraniums retail. McLeod Bros. report a good spring business, and find demand for pot plants increasing.

Reading, Pa.—In the market here many of the stall-holders sell flowers at such times as Memorial day. Outdoor flowers were scarce this year and all sellers did big business. Calvin Angstadt, of Friedensburg, sold fifty-two bouquets at from 35 cents to 50 cents each and seven dozen peonies at 80 cents a dozen. Few peonies were in bloom and they were in great demand, bringing better prices than usual.

CHRYSANTHEMUMS

SEASONABLE SUGGESTIONS.

Care of Planted Stock.

As soon as the stock is planted the shading on the house should be removed, if any has been applied for other crops. The chrysanthemum does not need shade at this season of the year, nor, in fact, at any season, except when the flowers are finishing, and then it is necessary to protect them from the sun.

It is true that if a house is shaded in summer it will not get so hot, but plants when shaded have a tendency to run soft, and the temperature can be reduced by copious sprayings. On bright days the house should be sprayed over several times during the day—not only the plants, but the roof and paths. This will keep down the temperature and furnish the moist, growing atmosphere that the plants delight in. The foliage, which is one of the most necessary adjuncts of the flower today, can never be produced in an arid atmosphere, and the man behind the hose soon learns to spray without getting the soil of the benches too wet.

Staking.

Get your plants staked, also, as soon as you can, so that they may start right and keep up the good work. It is dead wrong, though a common practice, to leave the young plants lying around all over the bed for weeks after planting. Some growers even go so far as to claim that the plants make more root when so treated. Such an idea is, of course, a fallacy, and could have been nothing more than a lazy man's ingenious excuse for not doing his work on time. Stake up your plants and let the other fellows' lie around, if they want them that way.

Many plants will produce a bud soon after being planted, and it does the plants no harm if the bud is rubbed out and the best one of the shoots that will appear is kept for service. As a general rule, the second shoot below the bud is the best to retain, but do not be in any hurry to remove the others till you have seen how they look, as frequently some of them come blind after the first leaf has formed.

Singles and Pompons.

I have always been successful in producing beautiful sprays of these plants, and my method is as follows: I put in cuttings from June 10 to 20, and as soon as they are rooted they are planted in a bench, six inches apart. No pinching or training is resorted to, and the plant makes a single, clean stem till it makes its "break," about the end of August. Then it branches out and makes a beautiful top, with from six to twelve clusters of flowers. Then, when it is cut close to the ground, one has an ideal spray of flowers, as nearly perfect as possible, varying in length according to the variety, from eighteen inches to three feet.

CHARLES H. TOTTY.

A NEBRASKA PLANT.

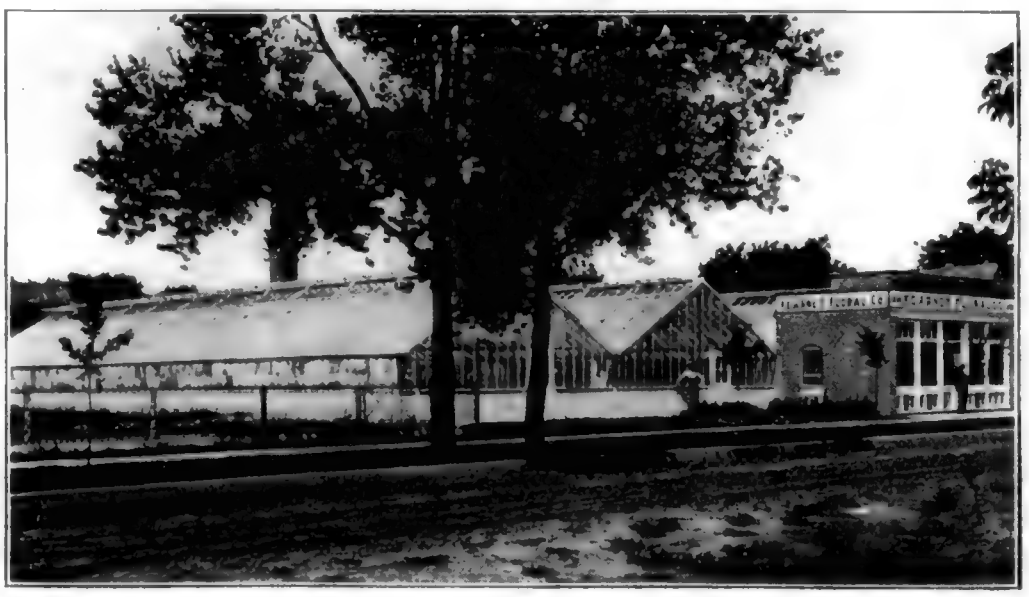
During July, 1907, Irvin L. Downing, son of Geo. H. Downing, and one of the firm of Geo. H. Downing & Son, coal merchants, at Kearney, Neb., obtained a decidedly favorable impression of the florists' business, and wrote to the John C. Moninger Co., Chicago, for plans and specifications for a new greenhouse, consisting of office, workroom and two houses 28x100 feet. He at once placed the order for the material for the two houses, and let the contract to W. F. Crossley, a contractor at Kearney, for the erection. Construction commenced the middle of December and, although they experienced some bad weather, they were able to turn out and take care of a good Easter business. They soon discovered that two houses were too small, and May 6, 1908, placed an order for a third house, which was finished about July 1.

During January, 1908, the Kearney Floral Co. secured the services of H. L. Hunt, of Oklahoma City, Okla., who had been manager for the Stiles Co. for several years, to take charge of the technical part of the work. The trade is opening up with a fine prospect for continued growth and a large business within a few years.

CRESOTE IN GREENHOUSE WOOD.

Has the United States Department of Agriculture done any experimenting with the cheap creosote oil for preserving wood greenhouse benches, and especially with reference to its effect upon rose bushes or other plants grown in benches so treated?

I have been using crude petroleum in this connection for the last few years and have seen no harm done to the rose bushes by it. This is applied each summer, after the old soil has been removed. Since creosote oil is now being used so largely for preserving wood, among other things railroad ties, and since I have not heard of petroleum being used for these purposes, my inference is that creosote is the better preservative, as it is more expensive.



A. J. PENNOCK.

The Department of Agriculture, and also the Propagating Gardens of the War Department, have given some study to this question. Several years ago the walls of a greenhouse of the Propagating Gardens, which was being repaired, were replaced with lumber which had been treated with creosote preservative materials recommended by someone interested in lengthening the life of bench material. The result was that it was practically impossible to grow roses or carnations in this house for nearly a year after the material was used, in spite of the fact that the lumber was afterward coated with a lime cement whitewash and every precaution was taken to prevent the escape of the volatile oils from the treated material. It was not until the treated lumber was all torn out and replaced with normal material that it was possible to again grow satisfactory crops in the house.

I can conceive that there would be much less injury from crude petroleum than from strong creosote products. Creosote, even in very minute quantities, is injurious to plant growth and I would not advise its use in connection with greenhouse construction in any form.

L. C. CORBETT.

NEW HAVEN, CONN.—John Slocombe, on Townsend avenue, is building another greenhouse, 34x135 feet.

Establishment of the Kearney Floral Co., Kearney, Neb.

yellow varieties alone numbering over thirty. Some day we may expect to see these grown by the houseful for market, but in the meantime we can afford to hang on to the parent type.

Its Culture.

Coming from a warm country, this cypripedium does well grown in either a warm or cool house. In summer a cool north house, or even a coldframe where the plants can be close to the light, suits them to a nicety. We have seen splendid specimens kept outdoors under overhanging branches of trees. Unlike cattleyas, the cypripediums, like most of the other terrestrial orchids, need an abundant water supply all the growing season, and in hot weather they will need a thorough soaking each day if the pots are filled with roots. When well established, water once in ten days with weak cow manure water, but do not use any chemicals. The plants will enjoy a syringing every warm afternoon.

It is doubtful if any other orchid pays much better for space occupied and care bestowed on it than C. insigne. Allowing only twelve blooms to each 6-inch pot, at the rate of 10 cents per bloom they yield a good profit, and as they increase in size rapidly their value cannot be estimated merely by flowers sold.

This lady's slipper does well in either fibrous loam or a mixture of loam and fern fiber. It grows only moderately in pure fern fiber. Some moss can be used among the loam in potting. This work cannot be done now, but in February or March. As a general thing, a night temperature of 55 to 60 degrees will be found to suit C. insigne well. The yellow forms seem to like a slightly higher temperature.

ADIANTUMS.

This is the time of rapid growth with all ferns, and with a cessation of the rush incidental to bedding out, planting mums and similar seasonable duties, it is well to give the ferns a little attention. The adiantums do not succeed well in a bright house. The fronds when so grown are pale in color and undesirable. If a house well shaded can be set apart for their culture during the warm months, where they can be fairly close to the glass, they will produce a wealth of fine fronds. Pots well filled with roots will need some liquid manure once a week. Let the doses be rather weak, and if some soot is used in the water it will assist in keeping the fronds a fine dark color.

If greenhouse space is limited and a suitable place cannot be given them, coldframes can be called into requisition. Give the sashes a good coating of whitewash (kerosene and white lead is suitable), dig out the loam so as to give the plants sufficient head room, spread a layer of coal ashes to stand the pots on and, if snails are in evidence, give a dusting of air-slaked lime in addition. You will find that your ferns will grow faster and stockier than in a dark greenhouse, and be fine plants by the middle of September, if carefully tended.

Not only adiantums, but many other ferns can be similarly grown in summer. It is surprising that more frames are not utilized in this way in summer, instead of being allowed to lie idle and grow up with weeds. The successful commercial man never wants to see any houses or frames unoccupied any longer than bare necessity requires.

.....BUSINESS AND OTHER NOTES.....

Dover, N. H.—Charles L. Howe had a large extra force of men employed at his Garrison Hill greenhouses preparatory to the Memorial day rush.

Rochester, N. Y.—The Florists' Club, in a letter signed by its secretary, H. B. Stringer, has accepted Mayor Edgerton's invitation to hold its flower show in Convention hall, November 2 to 4.

Dover, Me.—At the Park Street Greenhouses Mr. Genthner had the finest crop of carnations he ever has been able to cut, just right for Memorial day. He is doing an excellent business this spring.

Joliet, Ill.—The Joliet Republican printed a Memorial day section in red and blue, and Albert C. Rott and Joseph Labo took advantage of the opportunity to publish attractive advertisements in colors.

Pueblo, Colo.—G. Fleischer, not content with the business at store and greenhouses, just before Decoration day put a full assortment of bedding plants at Roselawn cemetery, where a large trade was done.

Wyomissing, Pa.—B. H. Farr, of the Wyomissing Nursery, invited the public, June 8, to view his peony garden, and he and his employees devoted the day to showing the visitors about the place. The garden covers five acres.

Neenah, Wis.—Louis Otto says that trade for Decoration day was fine, though the quality of the stock was somewhat poor. Some excellent peonies were shipped in. Cape jasmine could not be had, on account of its lateness.

Belfast, Me.—W. E. Hamilton has lately passed through one of the busiest periods that he has known in his twenty-five years of business. In addition to Decoration day work and general trade, he has handled an unusual number of funeral orders.

Freeport, Ill.—Louis Bauscher has turned his business into a corporation, application for a certificate having been filed at Springfield June 9. The capital stock is to be $25,000. Three new houses are to be erected, using Garland gutter and truss construction with Moninger mill work.

Des Moines, Ia.—The J. S. Wilson Floral Co. says that trade for Decoration day was double the record of the establishment for last year, and Mr. Wilson states that from what he can learn among the other florists of the town the business everywhere was far ahead of any previous year. Trade in general all through the month of May was away ahead of last year.

Worcester, Mass.—The local florists say their plants and flowers have grown better this spring than last, and that they had a larger stock on hand with which to meet the Decoration day demand. But they say the demand was larger than that of last year; hence there was more of a shortage at the last minute than had been expected. Many orders were only taken conditionally and it was necessary to have much of the stock shipped in from Boston.

Rhinebeck, N. Y.—Frank Marquet is building a greenhouse on Chestnut street.

New Castle, Ind.—The illness of Herbert Heller has taken a turn for the worse, and his recovery is despaired of.

Bar Harbor, Me.—The Main street flower store of the Mount Desert Nurseries was opened for the summer on Monday, May 31.

Eliot, Me.—W. L. Fernald, the nurseryman, had a lively business during the last week or two of May, shipping his stock by the carload.

Jersey City, N. J.—John T. Withers is chairman of the committee on arrangements for the dedication of the Zabriskie playground June 19.

Tillsonburg, Ont.—Mrs. Wm. Rusling announces that the marriage of her daughter, Nellie May, and William L. Lindsay will take place June 30.

Hancock, Mich.—At the greenhouses and store of the A. M. York estate, extensive and systematic preparations were made for the Decoration day trade and a most satisfactory business was done.

Albion, Mich.—M. & S. L. Dysinger's stock of blooming plants was in unusually good condition this season, and their Decoration day sales were the best in their experience. Trade has also continued good since then.

Loda, Ill.—Addems, Morgan & Co. had a heavy business last month, disposing of thirty per cent more bedding plants than in May, 1908. They have also had a large increase in cut flower trade as compared with last year.

Hartford, Conn.—J. F. Huss presided at a meeting of the Connecticut Horticultural Society, June 11. The society has secured Unity hall for a dahlia show September 23, and contemplates securing Putnam Phalanx hall for a chrysanthemum show November 3 and 4.

Naperville, Ill.—Charles F. Rohr says there has been an unusually heavy business here in bedding plants. Everything salable in that line was gone a week before Memorial day. He estimates that his trade in May was about thirty per cent greater than in the same month of 1908.

Hamilton, Can.—Trade has been brisk in bedding plants. Store and funeral work have been quiet for the last few weeks. The Cannon Floral Co. disposed of all its bedding stuff at wholesale. The Vossen Floral Co. sold about 8,000 geraniums retail. McLeod Bros. report a good spring business, and find demand for pot plants increasing.

Reading, Pa.—In the market here many of the stall-holders sell flowers at such times as Memorial day. Outdoor flowers were scarce this year and all sellers did big business. Calvin Angstadt, of Friedensburg, sold fifty-two bouquets at from 35 cents to 50 cents each and seven dozen peonies at 80 cents a dozen. Few peonies were in bloom and they were in great demand, bringing better prices than usual.

SEASONABLE SUGGESTIONS.

Care of Planted Stock.

As soon as the stock is planted the shading on the house should be removed, if any has been applied for other crops. The chrysanthemum does not need shade at this season of the year, nor, in fact, at any season, except when the flowers are finishing, and then it is necessary to protect them from the sun.

It is true that if a house is shaded in summer it will not get so hot, but plants when shaded have a tendency to run soft, and the temperature can be reduced by copious sprayings. On bright days the house should be sprayed over several times during the day—not only the plants, but the roof and paths. This will keep down the temperature and furnish the moist, growing atmosphere that the plants delight in. The foliage, which is one of the most necessary adjuncts of the flower today, can never be produced in an arid atmosphere, and the man behind the hose soon learns to spray without getting the soil of the benches too wet.

Staking.

Get your plants staked, also, as soon as you can, so that they may start right and keep up the good work. It is dead wrong, though a common practice, to leave the young plants lying around all over the bed for weeks after planting. Some growers even go so far as to claim that the plants make more root when so treated. Such an idea is, of course, a fallacy, and could have been nothing more than a lazy man's ingenious excuse for not doing his work on time. Stake up your plants and let the other fellows' lie around, if they want them that way.

Many plants will produce a bud soon after being planted, and it does the plants no harm if the bud is rubbed out and the best one of the shoots that will appear is kept for service. As a general rule, the second shoot below the bud is the best to retain, but do not be in any hurry to remove the others till you have seen how they look, as frequently some of them come blind after the first leaf has formed.

Singles and Pompons.

I have always been successful in producing beautiful sprays of these plants, and my method is as follows: I put in cuttings from June 10 to 20, and as soon as they are rooted they are planted in a bench, six inches apart. No pinching or training is resorted to, and the plant makes a single, clean stem till it makes its "break," about the end of August. Then it branches out and makes a beautiful top, with from six to twelve clusters of flowers. Then, when it is cut close to the ground, one has an ideal spray of flowers, as nearly perfect as possible, varying in length according to the variety, from eighteen inches to three feet.

CHARLES H. TOTTY.

A NEBRASKA PLANT.

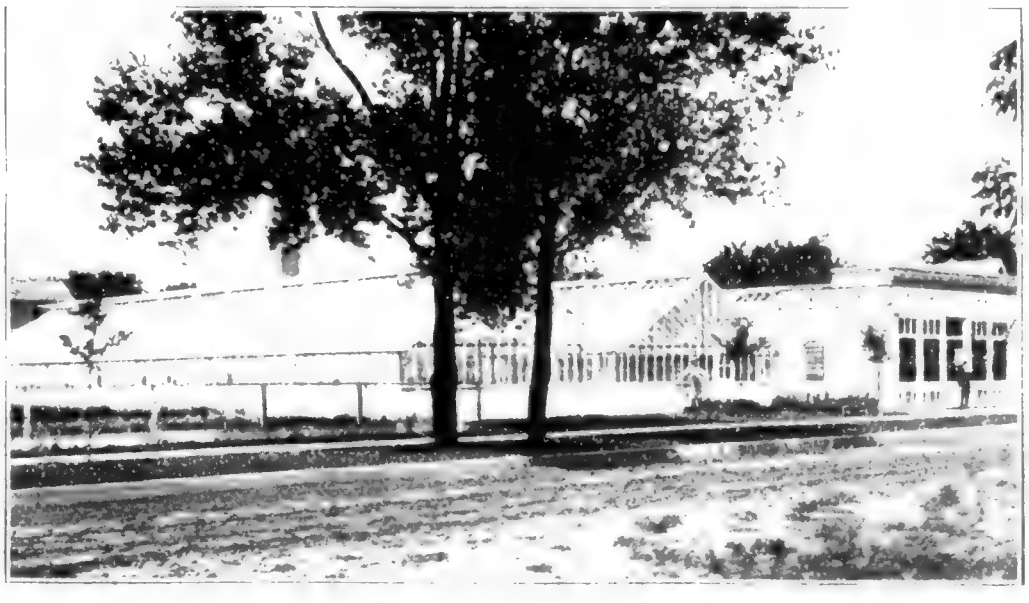
During July, 1907, Irvin L. Downing, son of Geo. H. Downing, and one of the firm of Geo. H. Downing & Son, coal merchants, at Kearney, Neb., obtained a decidedly favorable impression of the florists' business, and wrote to the John C. Moninger Co., Chicago, for plans and specifications for a new greenhouse, consisting of office, workroom and two houses 28x100 feet. He at once placed the order for the material for the two houses, and let the contract to W. F. Crossley, a contractor at Kearney, for the erection. Construction commenced the middle of December and, although they experienced some bad weather, they were able to turn out and take care of a good Easter business. They soon discovered that two houses were too small, and May 6, 1908, placed an order for a third house, which was finished about July 1.

During January, 1908, the Kearney Floral Co. secured the services of H. L. Hunt, of Oklahoma City, Okla., who had been manager for the Stiles Co. for several years, to take charge of the technical part of the work. The trade is opening up with a fine prospect for continued growth and a large business within a few years.

CRESOTE IN GREENHOUSE WOOD.

Has the United States Department of Agriculture done any experimenting with the cheap creosote oil for preserving wood greenhouse benches, and especially with reference to its effect upon rose bushes or other plants grown in benches so treated?

I have been using crude petroleum in this connection for the last few years and have seen no harm done to the rose bushes by it. This is applied each summer, after the old soil has been removed. Since creosote oil is now being used so largely for preserving wood, among other things railroad ties, and since I have not heard of petroleum being used for these purposes, my inference is that creosote is the better preservative, as it is more expensive.



A. J. PENNOCK.

The Department of Agriculture, and also the Propagating Gardens of the War Department, have given some study to this question. Several years ago the walls of a greenhouse of the Propagating Gardens, which was being repaired, were replaced with lumber which had been treated with creosote preservative materials recommended by someone interested in lengthening the life of bench material. The result was that it was practically impossible to grow roses or carnations in this house for nearly a year after the material was used, in spite of the fact that the lumber was afterward coated with a lime cement whitewash and every precaution was taken to prevent the escape of the volatile oils from the treated material. It was not until the treated lumber was all torn out and replaced with normal material that it was possible to again grow satisfactory crops in the house.

I can conceive that there would be much less injury from crude petroleum than from strong creosote products. Creosote, even in very minute quantities, is injurious to plant growth and I would not advise its use in connection with greenhouse construction in any form.

L. C. CORBETT.

NEW HAVEN, CONN.—John Slocombe, on Townsend avenue, is building another greenhouse, 34x135 feet.

Establishment of the Kearney Floral Co., Kearney, Neb.

RESULTS.
We give them. You get them.
We both have them.

Collections generally are reported good, so go after your money; it will come slow in July and August.

A handsome casket cover seen last week was made of white peonies with a spray of pink peonies across the center to lie on top of the casket.

It took more than half a century to work up adequate stocks of that grand peony, Festiva Maxima, but there are all the indications that at length adequacy has been achieved.

John G. Esler, secretary of the Florists' Hail Association, states that within the last ten days he has been notified of hail losses that will amount to $5,000. The association is in position to make payment as promptly as proper proof of loss is supplied.

Elmer D. Smith has said that of all plants on which a grower may wish to keep up-to-date, the peony is the hardest of which to select new sorts. The reason he had in mind is that it takes at least three years to bring a small peony plant to a strength of growth where the flower will show its true character.

THE BEST OF EVIDENCE.

There are many factors which may influence an advertiser part of the time, but it is actual results which influence him most of the time.

Cut out our geranium advertisement; it has done the business.—Hopkins & Hopkins, Chepachet, R. I., June 14, 1909.

Please omit my advertisements of vincas and dracaenas, for they have sold them all.—Dana R. Herron, Oleon, N. Y., June 13, 1909.

My stock is run down lower than ever, sales double those of last year, and the Review gets the credit for the larger share of the increase.—J. L. Moore, Northboro, Mass., June 13, 1909.

Please discontinue our advertisement, as we are completely sold out. This has convinced my proprietor that nobody else can sell as quick as the Review does.—H. J. Potomkin, Mgr., Forest City, Iowa, June 14, 1909.

CONVENTION BOWLING.

Some time ago President J. A. Valentine appointed E. F. Winterson, of Chicago, as manager of the S. A. F. convention sports at Cincinnati in August, with power to select his own associates on the committee. Mr. Winterson called upon C. E. Critchell and E. G. Gillett, of Cincinnati, to act with him. The Grand alleys have been secured for the men's bowling contests. The ladies' bowling will take place at Old Heidelberg, in Kentucky, and will be in the nature of an outing. Luncheon will be served at both places. At the Grand alleys there are eight good alleys, clean, light and airy.

Mr. Winterson has received offers of a number of prizes for the bowling, and would like to hear from others who wish to donate trophies. He does not want big, expensive cups, but prefers instead to offer a large number of not costly prizes, so that as many as possible of the participants can carry home a memento of the occasion.

PINCHING DAHLIA TOPS.

On page 7 of the Review of June 3, in answer to an inquiry regarding dahlias, C. W. gives some advice which is excellent if applied to certain varieties, but which would be bad if applied indiscriminately to all dahlias. The portion I take exception to reads as follows: "When the shoot is eight to twelve inches high, pinch out its top." This treatment of dahlias is as old, almost, as the history of the dahlia itself, but the treatment should be applied to tall growing varieties only. If applied to dwarf varieties, or varieties of a naturally spreading habit, its effect would be decidedly injurious, as it would only serve to aggravate a habit, almost a fault in itself, by making the plant still more squatty in its appearance.

I have found no necessity for pinching tops from any variety under a natural height of three feet. Such varieties as Frank Smith, Grand Duke Alexis, and in fact all tall growers, are benefited by pinching, but such varieties as Countess of Lonsdale, Standard Bearer, etc., would be injured. I take it that these points are so self-evident that further comment is unnecessary. W. W. Wilmore.

PLANT BED CLOTH.

Has anyone had any experience in growing early plants under plant bed cloth? How do the plants compare with those grown under glass? J. L. J.

Plant bed cloth can be used over frames in some cases to advantage, where not enough sashes are to be had. The kinds of plants that will stand the most cold are covered with the cloth, using the sashes over the young or tender plants. Regular glass sashes are much to be preferred. H. G.

CHICAGO.

The Great Central Market.

Two points of view might be considered in relation to the market in the last week. From the growers' standpoint it was an extremely poor week; indeed, the growers unreservedly pronounce it bad, and some even say the worst June week they ever have known. From the point of view of those interested in the quantity of stock passed on to the public, and in the money volume of sales, it was not so bad. Prices may have been at the bottom, but the quantity of the stock moved was so enormous that the wholesale houses found each day gave a total comparing well with last year, while the public must certainly have bought many flowers. The leading retailers report only an average June business. There are many weddings, but these call for only a trifling quantity of stock as compared with the general receipts. Most of the retailers have done more in funeral flowers than wedding work. By far the greater part of the receipts have been jobbed off to those who can move quantities when they can name the price.

For a few items there has been an excellent demand. There have been so few good Beauties that there has been skirmishing for supplies. Sweet peas are so popular that the good ones, except the Blanche Ferry color, have sold extremely well. Richmond has been in good demand, and there has been a fair call for the better grades of Killarney. Bride is now generally so poor that Kaiserin is good property. Valley has been sold in large quantity, but the supply has been even greater than the demand. The peony has been the popular flower for decorations. Outside of these items the demand has been negligible. The shipping demand has been much better than local trade.

The carnation growers certainly had a

Peonies

The Satisfactory Stock Order in Any Quantity

The Peony, if cut right, bunched right and handled right, is a reliable flower for shipping—we are sending out large quantities to far-distant customers. But not all growers put up stock that will ship with satisfaction. We are headquarters for the Peonies of the oldest and most experienced grower—the one whose example made the Peony business what it is today.

It's Better to Order of Amling Than to Wish You Had

Beauties

Really good Beauties are scarce, but we have a fine cut of excellent quality—our regular summer crop. Splendid heads, fine foliage, all lengths of stem. A trial order will make you a regular buyer of these.

Kaiserin

Far better than Bride is at this date—the best summer white rose. Our cut is large.

Killarney

This has become the leading pink rose, especially in summer. Ours are fine. The cut is large.

Richmond, Maid, Bride and other sorts in good supply.

Sweet Peas

We lead the West on Peas. Can supply any quantity—far the largest and finest lot on this market. Fancy, long-stemmed stock in all the leading colors.

For all orders on file at 12 o'clock for evening shipment, we pick the stock specially each afternoon.

Carnations

We have been headquarters for fancy Carnations all winter—and the best stock of winter will be far the best stock in hot weather, when poor stock can't be sold at all. Prices are low. Order in quantity.

Green Goods

We are headquarters for Asparagus and Smilax Strings and all other greens. New crop fancy Ferns, the best Berkshire stock.

Fancy Valley Always on Hand

Mention The Review when you write.

poor week. It is not the carnation's season. The regular flower store trade has consumed only a small part of the receipts, and the accumulation was so great that there was considerable waste. The buyers who could use carnations made their own prices, and where a flower store bought 100 carnations for $1 to $1.50, the Greek merchant or the department store bought 5,000 at from 5 cents to 12½ cents a bunch, according to state of preservation. Such a condition means an extremely low average. It is not at all unlikely that there are growers who received nothing but the Greek's prices all last week, and any who average over 50 cents per hundred probably have cause for congratulation.

The peony market was almost as bad as the carnation market. The big growers were only beginning to cut, but a host of smaller growers were industrious, and the receipts from this class of producer are of the kind that demand an immediate sale. The result was that there was no bottom to the price for this class of goods. At the same time, the stock of those growers who really know the peony business was held for fair figures. The best shipping stock brought 50 cents to 75 cents or went into cold storage. Three bunches for $1 was the popular price for the best open blooms. Even with the glut of open flowers there were consignments so tight in bud the wholesalers did not consider them worth storage charges. The weather has been cold and retarded the big crops of the Peterson Nursery, Kennicott & Son and Klehm's Nurseries. These will be on in full force this week if the weather is at all favorable, but much of this stock is stored.

Good cattleyas have been in demand, but of the miscellaneous stock nothing encouraging can be said. With other flowers so abundant and cheap, the miscellaneous stock can only be sold in small lots and at low prices, with a heavy waste of the lower grades. Several growers are offering big lots of short-stemmed Easter lilies, but find few takers.

Hoerbers' Progress.

Hoerber Bros., at Des Plaines, are making rapid progress with the erection of their range of ten houses 27x300. The seven rose houses will be completed by the end of this week. Five of them had been planted last week and stock in the sixth is now being benched. Some of the plants are up two feet or more, and it will be only a few weeks before cutting begins. The three carnation houses will easily be completed in time for benching the stock now in the field about August 1.

It is understood the stock will be consigned for a time, but shortly the firm will open a wholesale house and sell its own output.

Peterson's Activities.

William A. Peterson returned June 15 from a trip to the nurserymen's convention at Rochester, and the meeting of the American Peony Society at Queens, N. Y. He says the peonies at Rochester were not in bloom last week, nor were they in New England, but at Philadelphia they were past. He says the talk was all of good business on peony roots, and he anticipates a big season. Mr. Peterson says that this has been the most favorable season he ever has known for the development of perfect peony blooms. One thing which has been brought forcibly to his attention is the amount of stock all over the country that is blind. This is peony week at the Peterson Nursery, and they are going over every plant on the place and destroying every one two years old or over which does not show a flower.

Various Notes.

Frank Klimmer, formerly with H. N. Bruns, is now assisting his father, J. F. Klimmer, in Oak Park.

Weiland & Risch say they are taking advantage of the dull market to dry off roses that are to be carried a second year, thus getting a good start for fall.

The Chicago Carnation Co. has been shipping a large quantity of peonies to this market.

Emil Fransen, who has charge of the interests of Scheiden & Schoos in the Flower Growers' Market, started June 14 for Colorado, where in company with his brother he expects to spend much of the summer. During his absence Miss Josephine Then will sell the Scheiden & Schoos stock, as well as that of her father.

Mike Fink, of Kennicott Bros. Co., spent Sunday visiting the trade in Milwaukee, and says he found conditions there apparently satisfactory to all concerned.

John Mangel has used a vase of My Maryland, grown by the Poehlmann Bros. Co., as the center of his window display this week. The flowers are larger than those of any other rose now on the market, and of a beautiful silvery pink. They attract much attention. These blooms are from old plants. Other growers are cutting from young stock, and the roses are not recognizable as the same variety.

Chas. McCauley, who has charge of the

Supplies You Need in June

Ribbons and Chiffons No Wedding work is complete without Ribbons. Remember, we carry a complete stock of Ribbons and Chiffons, stock made up specially to match all flower and foliage colors, and can ship by first train. Send us a rush order for anything you may be short of—and stock up. Write for special circular and samples.

BASKETS

FOR FLOWER GIRLS
Complete stock of all Braid and Nest Baskets, something you should have always in stock. If not, order now. See page 15 of our catalogue.

FOR GRADUATES
Our long-handled Baskets are the correct thing for flowers for Graduates. Don't make the mistake of using any other. Prices from 25c to $1.25 each. Order an assortment.

ALSO A COMPLETE LINE OF NOVELTY AND FANCY BASKETS FOR EVERY PURPOSE.

WHEAT SHEAVES—A SPECIAL CIRCULAR ON FOLDING BOXES.

WIRE WORK—Nothing but the best, prices as low as any.

NO MATTER WHAT
You want in Supplies, order of us.

FERTILIZERS—Growers: It costs nothing to get our quotations.

establishment of Engledew & Co., at Geneva, has been sending in some excellent peonies.

At Maywood, June 13, unlucky day, the village authorities arrested practically every automobilist who ventured abroad in the town; a snail's pace was exceeding the speed limit. Most of the victims were Chicago people, and it probably was only by accident that Henry Wehrman was gathered in. He says the preliminary in such a case is to pay a dollar for the privilege of giving a bail bond.

A. L. Randall and W. W. Randall were at West Springfield, Pa., the early part of this week to attend a family reunion; the sons had not all been at home together in more than twenty years.

The Peterson Nursery sent its first peonies of the season to the A. L. Randall Co., June 14.

Percy Jones says some of his best carnation customers tell him the high prices they were obliged to charge at Decoration day scared the buyers off and that there has been little call for carnations since May 30, while other stock has continued in the usual demand.

The E. F. Winterson Co. notes that the summer travel to Michigan resorts is at last beginning. As soon as the cottagers begin going over, Winterson's have a run of buyers picking up bedding plants just at boat time.

E. C. Amling notes a special call this week for lavender sweet peas. He had one order for 5,000, and several for thousand lots, all of this color, for class exercises.

E. B. Washburn returned Saturday from a week's trip to New York.

The June issue of Concrete, a journal published in the interest of the cement industry, contains an illustrated article by Charles Morrison Dickinson. It need hardly be added that it is descriptive of a certain system of building greenhouse benches.

Bassett & Washburn cut heavily of peonies last week, and so did most of the growers south and west of Chicago, but it was not until early this week that those north and northwest of town got under way.

Robert Northam, of George Reinberg's force, is visiting at his old home at Iron River, Wis.

The John C. Moninger Co. reports that during last week they received more inquiries from prospective greenhouse builders than in any previous week in the history of the concern. They say the greenhouse building this year will break all records. Before another season they will have largely increased their facilities by erecting a new building.

Up to the last few days, Zech & Mann have had excellent success in marketing their annual crop of red gladioli, but advance orders no longer take them all.

E. H. Riehl, of Alton, was in town this week. He reports the best peony season he ever has had, because he got his entire crop in during the week before Memorial day.

Peter Reinberg bought 2,500 plants of My Maryland rose of the originator last year and was busy propagating during the winter. He not only worked up stock for his own planting, but had some to wholesale.

C. W. McKellar says the heavy crop of Cattleya Mossiæ is off and orchid prices are advancing.

Vaughan & Sperry are gradually getting into shape in their new quarters. A neat and commodious office is the latest addition to the facilities.

A. Weaver, of Massillon, O., was in town this week buying bedding stock, having sold out his own supply.

H. C. Metz, of Odell, Ill., was in town this week, getting prices on materials for an addition to his glass, and buying supplies to replace a stock happily depleted by a big spring business.

Secretary L. H. Winterson will not issue the new club by-laws and list of members' addresses until after the election of officers to take place at the next meeting.

CINCINNATI.

The Market.

The total amount of busines done last week footed up well, but when one considers the quantity of stock that was coming into this market, the average price was low. Not only that, but great quantities of stock of nearly all kinds found its way to the dump. I doubt whether ever before in the history of this market so many flowers had to be sent to the barrel. It was simply impossible to move them at any price. And this, as a rule, was not owing to the poor quality, but just because the supply was so much larger than the demand. Peonies were the worst sufferers, with carnations a close second. Then followed roses. With all of this, though, some high grade roses were bringing a first-class price and selling out clean.

Toward the latter part of the week there was a shortening in the supply, and things began to look more hopeful; the average price was better and everything pointed to a relief from the glut. Through it all, Beauties were fine property and brought a good price. Red roses of other varieties were also good. Some fine Maryland sold out clean and at good prices.

The Local Club and the S. A. F.

The annual election of the Cincinnati Florists' Society was held in the club rooms Saturday evening, June 12. The result of the balloting was the election of the following members as officers for the ensuing year: President, J. A. Peterson; vice-president, C. E. Critchell; secretary, D. Sunderbruch; treasurer, D. Rusconi; trustee, Gus. Adrian. This was simply the reinstatement of the officers who have served during the last year and, as they have the affairs relating to the entertainment of the S. A. F. here in August well in hand, their election was the proper thing. Now they have but to go ahead with the arrangements they have commenced, and to keep things moving lively.

Following the election, many points of interest were brought up for discussion. One point of special interest was the fact that the financial committee of the S. A. F. convention was able to make a favorable report, saying that subscriptions were coming in fast, that collections were good and the prospects were that the entire subscription fund would be in the hands of the committee shortly.

It was definitely decided to hold the big entertainment at Coney Island. This is a beautiful pleasure garden, on the

banks of the Ohio river and ten miles above Cincinnati. All visitors will be conveyed to the park on the steamer Island Queen, which is a mammoth excursion boat, with a capacity of 3,000 people. The river trip of ten miles is one of great interest and beauty. Coney Island is a pleasure resort of the first class, and there you can find about every form of amusement one can think of. It will be here that the ball games will be played and, besides that, there will be many other special things that are now being planned, of which we will say but little, they being left as a sort of surprise.

The final arrangements for bowling for both the men and the ladies have been made. For the men the Grand alleys have been secured. There are eight alleys, and they are the finest in this city. In fact, they are the same alleys used at the national bowling congress held in this city last year, so you will know that they are the best and regulation in every respect. These alleys are located on Vine street, a few doors above Twelfth. This is just a trifle over two squares from the exhibition hall, and consequently quite convenient. The ladies' bowling contests will be held at Heidelberg, Ky. This is a beautiful spot in the highlands of Kentucky, and about twenty-five minutes' car ride from Fountain Square. Here the alleys are of the same high quality, and the general surroundings will add greatly to the pleasure of the ladies. It is now time for all those who intend to take part in these bowling contests to notify C. E. Critchell, 36 East Third street, who is chairman of the bowling. It will be conferring a special favor on the local committee if you will do this, as it will enable them to have everything in shipshape for the crowds that we expect to handle at these bowling contests.

The shooting contests will be held at the Dayton Gun Club, Dayton, Ky. This club has a fine equipment, and everything is of the best. Again, should you be inclined to enter this contest, it would be conferring a special favor upon the committee if you would at once notify the chairman, Wm. H. Gardener, 128 East Third street.

The next meeting of the executive committee of the Florists' Society will be held at the Hotel Sinton, Monday evening, June 21. The following meeting will be held June 28, at the same hour and place.

Various Notes.

Joseph Linfoot is receiving the congratulations of his friends, as he was married last Saturday evening to Miss I. D. Ross, of this city.

William Murphy has just purchased a motor boat, which he will use during his summer vacations on the northern lakes.

C. J. Ohmer.

BOSTON.

The Market.

Trade was dull last week, there being only a light demand for nearly all lines. The present week opens with signs of improvement and from now until the end of the month it is hoped that business will show a decided betterment. Roses, outside of Carnot and Kaiserin, are getting poor, although some fair blooms of Killarney and My Maryland are seen. Carnations are not in good demand, other seasonable flowers being preferred. Prices have run as low as 25 cents to 50 cents per hundred on some days, but fair stock averages $1, fancies making $2 to $2.50. Yellow marguerites have a good sale at $1 to $3 per hundred. Gladioli sell fairly well, America making $1.50 per dozen.

Bachelor's buttons make 50 cents to 75 cents per hundred and valley $1.50 to $3. Good sweet peas are scarce and have sold as high as $1 per hundred. Double peonies are now coming in quite abundantly, prices varying all the way from $3 to $8 per hundred. Some of the earlies made as high as $1.50 per dozen, but prices will show a marked decline this week.

Cattleyas are abundant at $4 to $6 per dozen and sell slowly. Gardenias clean out quite well. Other flowers have an uncertain sale.

Club Meeting.

The final club meeting before the summer vacation was remarkably well attended at Horticultural hall, June 15; over 100 were present. In place of a regular notice a large number of queries came up for discussion and filled up the entire evening. These embraced a wide range of subjects. "What are the best rose species for massing effects, other than Wichuraiana, rugosa and setigera?" elicited an answer that R. lucida, multiflora, spinosissima and blanda were especially useful. Summer culture outdoors of genistas was recommended in preference to culture under glass. Vaporite, the new remedy for cutworms, has evidently not been much tried yet, but was reported by one or two to be all that is claimed for it. The San Jose scale was

believed to be a harder pest to fight than the gypsy moth, brown-tail moth or elm beetle, its presence being so much more difficult to detect.

The question, "Are we growing too many carnations commercially and would it not be better to grow more miscellaneous flowers and educate people to them?" caused some discussion. The need of greater variety was admitted, but the persistent blooming qualities of carnations and the fact that there always is a demand for them, added to facts that they ship well and are good keepers, were points growers considered. Lists of the best hardy hybrid perpetual and climbing roses and peonies were asked for and furnished, also the dozen best herbaceous flowers for commercial use. The last named lists contained among others: Achillea Ptarmica The Pearl, Phlox Miss Lingard, Peony Festiva Maxima, Physostegia Virginica, Tritoma Pfitzeri, Pyrethrum roseum, Iris pallida Dalmatica, Iris Sibirica alba, Lilium speciosum album, Delphinium Chinensis, Gypsophila paniculata, Aquilegia cærulea, Anemone Japonica alba, Iris Kæmpferi, Lilium candidum, Chrysanthemum Leucanthemum hybridum and Convallaria majalis. There were many other interesting queries.

The coming picnic caused considerable discussion. It was voted to leave details to the executive committee, which was instructed to charge all men 50 cents each. Exhibits were quite attractive and included a large display of herbaceous plants from R. & J. Farquhar & Co., another from Blue Hill Nurseries, and a third from Old Town Nurseries. Splendid Killarneys from Eber Holmes received a cultural certificate. George Hollis staged a collection of seedling peonies. E. F. Dwyer had a collection of seedlings of German iris. I. E. Hatfield showed Dimorphotheca aurantiaca, William Thatcher Platyclinis filiformis and Duncan Finlayson aquilegias. J. W. Duncan brought a collection of hardy roses.

Two new members were elected.

There were refreshments served as usual. The next club meeting will be held in September. Speakers are already engaged for the fall months.

Various Notes.

William Sim is busy once more harvesting his tomato crop, which will be immense in bulk, even larger than last year's banner crop.

Reports from bedding plant specialists are that, while the season has been rather late, demand has been strong, much ahead of a year ago.

Holm Lea, Professor Sargent's beautiful estate, has been the Mecca for thousands of visitors during the last few days, the gates having been opened to the public. The rhododendron and hardy azalea displays are finer than ever.

Horticultural hall, June 26 and 27, will attract lovers of hardy roses and other seasonable flowers, the annual rose and strawberry show being scheduled for these dates. While the season is some days late, roses are looking remarkably

well. Peonies, it is expected, will be strongly in evidence June 19.

Herman Waldecker, of Braintree, and W. B. Goodenow, of Stoughton, are among those who are in the market with fine crops of tomatoes.

Dan Hennessy, of Brookline, is happy over the arrival of a daughter at his household.

E. Allan Peirce is in New York on a business trip.

Thomas Pegler is bringing in a fine lot of double bachelor's buttons to the Park street market, where they find a ready sale.

E. A. Wood, of West Newton, is marketing some fine peonies.

John McFarland is cutting a fine lot of Carnot roses and gardenias.

W. E. Cahill, of Stumpp & Walter Co., is convalescent after seven weeks of illness.

Visitors: D. Wallace and A. Waterer, of Philadelphia. W. N. Craig.

TEMPLE SHOW AWARDS.

The Temple show is the most important exhibition of the year in London. The recent exhibition was one of the best ever held. The following newer plants were given awards of merit:

Rose Coquina—A Wichuraiana variety having large trusses of single flowers with prettily cupped petals. The plant is of vigorous habit, sending forth numerous long pendent shoots, from the ends of which the trusses of flowers are borne. The color is a shade of pink tipped with rose. Shown by Wm. Paul & Sons and Hobbies, Ltd.

Rose Margaret—A hybrid tea variety of large size. The color is a delicate pink, the tone being deepest in the center. Shown by Wm. Paul & Sons.

Rose Mrs. Taft—A polyantha variety, as exhibited, about two feet high. The stiff shoots are crowned with bunches of double flowers that are a deep shade of rose. Exhibited by Hugh Low & Co.

Rose American Pillar—A charming pillar variety, with relatively large, single blossoms borne in big clusters. The color is rose-pink, the base of the petals being white. A variety that is sure to become popular. Exhibited by H. Cannell & Sons.

Rose Jessie—A dwarf polyantha rose, somewhat similar to the well-known Mme. N. Levavasseur variety. The petals are a beautiful crimson tint. The plant is suitable for pot culture. Shown by Henry Merryweather & Sons, Ltd.

Begonia Pink Pearl—An exquisite variety, the petals being soft rose-salmon. The plant was especially vigorous, and had no fewer than eight fully-expanded blooms. These are of the largest size, and of the type known as rose-centered. Shown by Messrs. Blackmore & Langdon.

Carnation Carola—A large, clove-colored variety, possessing considerable fragrance, the perfume resembling the clove carnation. The habit is vigorous and the flower stems very long. Shown by C. Englemann.

Ficus Australis Variegata—A number of plants, each about eight inches in height, were displayed in a basket. The foliage is smaller, but shaped similarly to that of F. elastica, and it is densely variegated with gold. Shown by Sander & Sons.

Ptychoraphis Siebertiana—A palm resembling an elegant plant of Kentia Forsteriana. Shown by Sander & Sons.

markings towards the outer edges. The falls, which are more heavily reticulated, are white near their bases. Shown by Amos Perry.

Iris Hybrida Sir Dighton Probyn—A plant of fine stature and distinction. The standards are of a rose-mauve tone, faintly yet freely lined with white. The falls are of purplish crimson with dark signal blotch. The style branches are of a brownish-crimson shade. Shown by Amos Perry.

ERIE, PA.

Trade keeps up well, though the main rush has subsided. There have been several large funerals this week and choice flowers were in demand. Cattleyas, valley, Beauties and forget-me-nots were used in pretty combinations.

The board of education gave a banquet at the Country Club June 14. The large table was square, with a square opening in the center. This opening was filled in with palms, etc. The table was edged with Asparagus plumosus, with here and there a cluster of white carnations. The color scheme was green and white. The decoration was furnished by the Baur Floral Co.

Miss M. Garlow, of Cincinnati, O., was in the city on business June 12.

Roman Olsowski has purchased the greenhouses on East Eighteenth street, formerly owned by John Stelle, a market gardener. Mr. Olsowski is changing from vegetables to flowers.

Charles Schiff, salesman for the Baur Floral Co., is spending his vacation with relatives in Buffalo. B. P.

APHIS ON CINERARIAS.

Can you tell me a good remedy for cineraria lice? They make me lots of trouble. O. L. H.

What you refer to is probably green aphis, which has a marked partiality for cinerarias. To keep your plants clean you must fumigate them, on an average, once a week while in the greenhouses, otherwise the aphis will simply ruin them. During the late summer and fall months, while your plants are, or should be, in coldframes, if you lay fresh tobacco stems among them once a fortnight, it will keep them clean, but in the greenhouses fumigation in some form is necessary. C. W.

FEVERFEW FOR MEMORIAL DAY

Will you tell us when to plant double feverfew for Memorial day in Maine? W. G. M. & S.

A suitable time to plant double feverfews in the benches is from the beginning of February until the middle of March. In your latitude it would be better to get the planting done not later than the end of February. C. W.

BRACEVILLE, ILL.—William Moran, of Braidwood, has opened a flower store in the Hanis building.

Niessen's News Column

Do You Need Good Roses?

WE have the finest American Beauties and Kaiserins coming into Philadelphia — roses grown by skilled growers under the most favorable conditions, in a cool climate where the blooms can mature slowly, giving size, color and substance impossible in warmer climes.

We can give these flowers on short notice in any quality and quantity desired.

PHILADELPHIA.

The Rising Eastern Market.

The cut flower market showed a slight improvement during the last three days of last week and the first three days of the present week. This is not due to any marked increase in business, but to a falling off in production, especially of the salable grades of flowers. Business has been a little better with two or three of the wholesalers who had heavy shipping orders, notably for American Beauty, always the best selling rose when flowers reach their summer level. The accumulation of the ordinary stock has been marked, the street affording an outlet for only a part of the surplus.

Peonies are practically over, except in rare instances. After this week the market will depend on the cold storage stock, apparently not nearly so large as in former years.

The cool weather revived the drooping spirits of the old crop Beauties, color and size improving where care was given. The demand has been excellent for really salable Beauties, but prices rule low. Fancy grades of Killarney, Kaiserin and Liberty, which has now passed Richmond in the race, have brought excellent prices, but the ordinary grades of all roses vex the spirit of producer and seller to a degree not long to be borne.

The supply of orchids has decreased, Cattleya Mossiæ noticeably so. A few Cattleya Mendellii have been eagerly welcomed for weddings, their color combinations being considered ideal. A moderate supply of the large-flowered Cattleya gigas is in evidence. Lily of the valley has been in excellent demand, probably selling as well as any flower in the market, large quantities being used in the local and out-of-town wedding orders.

Sweet peas have been really scarce, owing to the rainy weather. This statement, though correct, may be questioned should the water-soaked make-believes be considered. No discriminating buyer will consider them for a moment.

Carnations are rapidly waning. The bulk of the stock now coming into the market is not of a quality that the wholesalers care to push. There is, however, a moderate supply of high grade flowers. Enchantress comes out strongly as a warm weather variety, its delicate beauty being less marred by the heat than even the silvery whites.

Harrisii lilies, reported dull last week, have sold well at times, several large orders clearing up the surplus. Alyssum, candytuft, cornflower and several other varieties of outdoor blooms increase the volume of business without materially affecting total receipts.

The first asters of the season have made their appearance.

Asparagus has been in demand. By asparagus is meant the genuine article, not the scrubby sprays that the growers like to clean up at the end of the season and at other odd times. Smilax of good quality is not abundant. The drop taken by dagger ferns with the opening of this month is of interest.

Horticultural Hall to be Sold.

The Pennsylvania Horticultural Society has for a long time been confronted with a serious proposition. The society is land-poor; it is dependent on subscriptions for its monthly needs. A meeting of the members was called for Tuesday, June 15, to decide whether or not Horticultural hall should be sold, the idea being that the income derived from the proceeds of the sale, properly invested, would enable the society to increase its sphere of usefulness. Representatives of the syndicate of bond-holders who built the hall were present. After full discussion it was decided to sell the hall.

Various Notes.

The Highland Rose Co., Morton, Pa., is greatly pleased with White Killarney. The company has 1,000 plants in the houses that William J. Muth describes with so joyous a laugh that you know they must be trees indeed.

John Merkel, of C. Merkel & Sons, Mentor, O., was in this city June 14. Mr. Merkel, who was returning from the

peony meeting and show at Queens, L. I., spoke with confidence of business conditions; he is evidently a believer in the future of the peony. Mr. Merkel left on the evening train to Reading, Pa., then to Ithaca, N. Y., to see peony experts.

M. Rice & Co. have increased their office force and floor space by one-third. The three spring months have each in turn been the largest business months in the firm's history.

The Andorra Nurseries, Chestnut Hill, held a peony and rhododendron show last week. The display, which was made in the sunken garden on the hillside overlooking the Wissahickon, was described as most beautiful by those who were fortunate enough to see it. William Warner Harper issued invitations by note to his friends and through the press to the general public. Many visitors attended.

Two business men in a Lansdale train, evidently residents of that prosperous suburb, were heard discussing the mammoth greenhouse of the Florex Gardens, and the even larger one now in course of erection. "A New York enterprise," one stated positively, "Philadelphia can't do such things." The other assented. What do you think of that, Mr. Feurstenberg?

H. Bayersdorfer & Co. will offer a silver bowling cup for the inter-city competition at the Cincinnati meeting of the S. A. F. This cup must be won three times to become the property of any club.

Leo Niessen says that the car strike brought summer to Philadelphia two weeks earlier than usual.

William F. Kasting, of Buffalo, is a visitor this week.

The Street positively asserts that it has been decided to plant sweet peas, Zvolanek's winter-blooming varieties, in the new mammoth house at North Wales, as a curtain-raising crop, so to speak, for the carnations that will follow next summer. This plan is believed to be the outcome of the rapid progress in the building made possible when Eugene Bernheimer and Henry C. Geiger both put their shoulders to the wheel at once and pushed.

There is decided difference of opinion regarding the spring bedding plant season. Some of the growers did poorly at Memorial day and have not caught up

since, while others sold as many plants as they had, and in some cases bought quantities to fill orders. On the whole, it seems probable that the season was scarcely equal to last year, though business is not over.

William Munro, Garrettford, Pa., is installing a new horizontal tubular boiler with ample capacity to heat the new house that will go up next spring and probably each oncoming spring, let us hope, for many springs to come.

Adolph Müller, North Wales, Pa., will sail for Europe July 1 for a six weeks' trip among the growers and nurserymen of Holland, Germany and England.

W. E. McKissick & Bros. have received the first asters of the season. Their Newport-grown Killarney are of fine quality.

The steamer Pisa for New York and President Lincoln for Philadelphia brought large invoices of sea mosses and supplies to H. Bayersdorfer & Co.

The East Washington Lane greenhouses of the William Graham Co. are closed.

The Robert Craig Co. is rapidly pushing work on the new houses at Norwood, Pa. The sashbars are on two of these houses, which Robert A. Craig hopes will be ready for planting with 4-inch carnations by July 1. Begonias, crotons and pandurata orders have kept this company busy.

The Henry A. Dreer Co. continues the educational display in the windows of the Chestnut street store. The varieties shown are always correctly labeled.

PHIL.

NEW YORK.

The Market.

Eighty degrees in the shade! Plenty of stock, but quality not prime; demand light, even with the wedding harvest and the sweet girl graduates, and what more need be said of the market? The yearly clean-up and repainting and well-earned holidays are close at hand. It has been a strenuous season.

Beauties keep their heads above water better than any other of the roses. Some of the roses show mildew. The new crop is still in process of development. The peony is king now, and those who attended the convention at Queens and witnessed the prize display and the wonderful groupings of the acres of this grand flower in the Cottage Gardens grounds will readily subscribe to this. Better flowers have never been seen in the New York wholesale market. Prices for the best are satisfactory. Anything mediocre or small in flower is only a menace to the legitimate market and had better be kept at home.

Carnations have fallen fast, and their tendency to sleep is only natural. The best bring fair prices. The peony people last week fell in love with the Mrs. Ward and Alma Ward varieties. John Young was a visitor at Cottage Gardens Saturday, June 12, looking over the goods he handles.

The cut flower market seems to have a wide source of orchid supplies, and the flower still grows in popularity, especially the cattleyas, some specimens of which now exhibited have never been excelled.

Club Meeting.

The Florists' Club held its last meeting for the season, until the second Monday in September, on the evening of June 12, and about sixty members attended. The peony exhibit did not materialize, but a fine display of herbaceous plants was made by W. A. Manda. Robert Schultz read the resolutions on the death of Herman Dreyer, and W. H. Marshall those on the death of Ex-President John Scott, in which the enduring record, brave example, untiring industry and willing effort of each were feelingly referred to. The home life and devotion to the aged parents was fittingly commemorated.

John Birnie spoke for the market com-

mittee, the busy mornings and crowded streets around the present market making a larger space necessary than could be available on Twenty-eighth street, as suggested a month ago by J. B. Nugent, Jr. The present cost of the market property is $1,000 for three months. It was suggested that the club coöperate with the present organization. Grafting was condemned and the need of a right to the ground where the present market is situated earnestly commended. C. H. Totty expressed his sympathy with the suggestion. It was suggested that the club appoint a committee to interview the powers that be politically. J. B. Nugent announced that his second interview with the capitalist who was to build a large central structure for the club and for market purposes, had shown that the gentleman had been talking through his hat and that there was nothing in it but natural gas. The club did not seem at all surprised at the announced result and the impossible proposition which involved a guarantee from the club of some $35,000 yearly. The old committee was discharged and a new one appointed, consisting of A. L. Miller, A. Schultheis, H. C. Steinhoff, J. Birnie and F. H. Traendly.

Mr. Traendly reported for the transportation committee, suggesting the New York Central or the Pennsylvania railroad as the best route for the Cincinnati convention. A rate of $15.75 each way was announced and the different hours of leaving New York were submitted. Special trains or cars, according to the size of the party, were promised and the decision was left to the committee with full power to act. The secretary wishes to know at once who will go to the convention, to facilitate arrangements with the railroad that may be chosen. On motion of Patrick O'Mara $50 was appropriated for the house committee to be used in entertaining those who may attend while in transit.

H. A. Bunyard reported for the outing committee, showing $609 subscribed for advertising in the souvenir, and nearly $300 for prizes. The list of events and names of the prize donors was read by the secretary. Over fifty pages of the sixty-page souvenir have been secured by advertisers and nearly 150 photographs of club members will be printed and the book distributed about June 20. Extra copies may be had at 35 cents each, three for $1, by applying at once to the chairman. The edition is limited.

The exhibit of the evening was made by W. A. Manda, of East Orange, and included a large list of herbaceous plants. A cultural certificate for the whole exhibit was accorded Mr. Manda.

Messrs. Roy and Charles Peters were nominated for membership.

A discussion as to the appointment of a nominating committee took place, Messrs. O'Mara, Wagenfohr, Weathered, Birnie, Schultz and Marshall taking part in the debate. It was finally decided on motion of C. B. Weathered to adopt the usual system of nominating by a committee and the president announced its members, as follows: C. B. Weathered, C. H. Totty, John Birnie, H. A. Bunyard, W. J. Elliott, W. A. Manda and James McManus.

A committee to draw up resolutions on the death of C. L. Allen was appointed, consisting of Patrick O'Mara, Mr. Hendrickson and W. A. Manda.

The secretary announced the early issue of a list of the club members and requests all to send present address at once. H. A. Bunyard, state vice-presi-

dent of the S. A. F., distributed blank cards of application for membership in the society and urged an increase in the New York enthusiasm.

Mr. Leuba, one of the New York park gardeners, made a strong plea for co-operation by the club in inducing the city to make the pay of its gardeners commensurate with their ability and education, as compared with the common laborers, whose pay is greater than that of these competent horticulturists. Robert Berry, also holding a position in one of the parks, ably seconded Mr. Leuba's contention. The matter of practical sympathy and effort in behalf of the park gardeners was on motion of W. J. Elliott referred to the legislative committee. The general opinion of those present was entirely in sympathy with the contention of Mr. Leuba and Mr. Berry.

Various Notes.

Arthur Harrington is suffering from a severe attack of rheumatism at his home in Madison, N. J.

Julius Roehrs, Jr., says there is a great crop of gigas in full bloom.

Arthur T. Boddington is home from a New England trip. A large shipment of orchids has just been received by his firm.

W. H. Siebrecht, Jr., of Astoria, is the proud father of a son, who has been christened W. H. Siebrecht III.

John Seligman has a new wholesaler in the family, the stork last week having left a boy at his home, so the firm of Seligman & Co. can now go on indefinitely.

There is considerable greenhouse building going on around New York, quietly,

This Code is a great MONEY SAVER in correspondence between the Jobber and Retailer and is INVALUABLE in the DELIVERY OF FLOWERS BY TELEGRAPH.

This Code in the hands of a chain of houses throughout this and foreign countries would enable the Florist to wire full directions at very small expense. Here is a sample order: "Deliver to Miss Watson, No. 395 Sixth avenue, with card of her brother, floral design representing a bell, and a few fancy chrysanthemums. Deliver at 6 p. m. Answer as soon as delivered." Here are 34 words; in Code would be 11 words, thus: **"Sprawl Watson Cabalist Sixth Spread Brother Tangling Few Unware Stalking Survival."**

$2.50 per copy; $25.00 per dozen.

FLORISTS' PUBLISHING CO., Caxton Bldg., 334 Dearborn Street, CHICAGO, ILL.

Or W. E. ARNOLD, Compiler, Fitzgerald, Ga. Codes made to order for any business.

Mention The Review when you write.

unostentatiously, of which more will soon be heard. Some of the new houses are of the half-acre brand. Prosperity is in the air. The coming season already is bright with promise.

The outing committee has met with wide and generous appreciation. Prize donations and souvenir advertising together approximate $1,000, a record far in advance of any year in the club's vacation history.

W. A. Sperling, for some years the popular representative of the Stumpp & Walter Co., has been elected secretary, Henry Eicke having resigned. Mr. Sperling will continue to make his periodical calls on customers.

Collier V. Hemenway, for twelve years superintendent of the John D. Rockefeller estate at Tarrytown, N. Y., was buried, June 13, from his home on the estate. He was a great favorite with Mr. Rockefeller and a large circle of friends. His employer and many others sent beautiful floral tributes in sympathy with the bereaved. The estate where Mr. Hemenway presided is one of the largest in the country.

The schedules in bankruptcy have been filed by the Fleischman Floral Co., showing over 300 customers with unpaid accounts amounting to over $7,280; several popular actresses, actors, racing celebrities and such are on the list. The total liabilities are $108,991. The assets include: Autos and wagons, $4,400; stock, $4,000; fixtures, $5,000; the total amounts to only $20,748. Among the creditors, J. I. Raynor is down for $2,424; the New York Cut Flower Co., $3,694; the J. M. Keller Co., $1,300, and Joseph Fleischman himself for $27,995, money loaned the firm, and $20,000 unpaid salary.

The F. R. Pierson Co. has six big half-acre houses at Scarboro. The day is fast coming, Mr. Pierson thinks, when the big houses will be a necessity of the trade, if one wishes to make of it a permanent investment. Many share this belief, as the immense house at Florex Gardens, the biggest on earth, seems to demonstrate, and there are dozens of plants in the country that speak on this line of business sagacity and requirement with no uncertain sound.

J. Austin Shaw.

A divorce has been granted Emma Jackson, from Andrew Jackson, a Brooklyn florist, with $15 a week alimony and the custody of their daughter, 10 years old.

Aloysius Gross, who shot and killed John Scott, of Flatbush, April 19, pleaded guilty of manslaughter in the first degree before Justice Maddox in the Criminal Branch of the Supreme Court June 7. The maximum penalty is twenty years. Gross was indicted for murder in the first degree, but was allowed to plead to manslaughter. A later report has it that Gross has changed his mind and will ask to be allowed to stand trial for murder.

Peekskill, N. Y.—C. H. Robinson, the Main street florist, has hired the entire building and is now occupying the living apartments over his store.

La Cross, Wis.—The park commissioners are considering the advisability of establishing a public nursery, for the growing of flowers, shrubbery and trees for the city's use. Superintendent Richard Iwerson is strongly in favor of the movement and feels certain, he says, that it would be a step in the direction of economy.

Bangor, Me. — Frank P. Lane, who some years ago purchased the business at the Winter Garden, and the greenhouses on Mount Hope avenue, from Carl Beers, has now transferred the business and property back to Mr. Beers and will become vice-president of a piano company in this city. The greenhouses and gardens will be continued under the personal management of Mr. Beers, who has had a thorough experience as a florist.

PROVIDENCE, R. I.

State of Trade.

Funeral work has remained brisk, while orders for graduations, class days and commencements, with the incidental social functions, have kept everybody busy. Sunday, June 13, was Children's day, as well as Firemen's Memorial Sunday, and in consequence there was a great demand for cut flowers and decorative plants.

Outdoor landscape work is occupying the attention of a majority of the dealers, and the demand for bedding stock by the public generally was never so great as it has been this spring.

Various Notes.

The display of floral tributes at the funeral of Austin E. Mylod, one of the leading merchants of the city, June 8, was one of the largest seen here in a long time, between fifty and sixty pieces furnishing a demand that was well distributed among the trade.

The Rhode Island Horticultural Society will hold three exhibitions between now and next fall. The usual exhibition of strawberries and roses will be held in about a fortnight, a display of dahlias in September, and the annual exhibition of chrysanthemums November 12 and 13.

Joseph Leikens, the New York florist, and wife have arrived at Newport for the summer, having opened a branch store in that city. Mr. Leikens was one of the guests with the Old Guard of New York at the annual anniversary observance of the Ancient and Honorable Artillery Company of Boston.

Charles H. Hunt has sold over 4,000 small geranium plants at retail. He had the decorations for the Providence Veteran Firemen's Association's Memorial Sunday exercises and for the golden jubilee of St. Michael's R. C. Church, June 13.

Handsome floral and palm effects are to be added to the Newport Golf Club grounds, at Newport.

Johnston Bros. and O'Connor were hard put for choice cut stock to supply orders for the coming out party of Miss Hope Hodgman, at East Greenwich, June 8.

the grounds and the maintenance of the greenhouses. Mr. Russell in his will bequeathed the sum of $20,000, to which Mrs. Russell subsequently added $15,000, the whole fund to be known as the Henry G. Russell Fund, the income of which is to support the greenhouses at the institution.

Light frosts were reported from various parts of the state on the morning of June 10. From the southern part of the state, Shannock reported 28 degrees, and Carolina 27 degrees. Beans were badly cut down and other vegetation suffered.

Johnston Bros. furnished the flowers and decorations for the Smith-Smith wedding, June 8.

O'Connor recently had nine large pieces for a funeral which are said to have cost more than $500. Two were immense wreaths of ivy leaves and cattleyas, and another was entirely lily of the valley. A mound of 125 half-blown Richmond roses was another piece. O'Connor also had the decorations at the Barnfield-Arnold wedding at Pawtucket, June 8. W. H. M.

STEAMER SAILINGS.

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., Watson S. Woodruff, Orange, Conn.; First Vice-pres., J. C. Robinson, Waterloo, Neb.; Sec'y and Treas., C. E. Kendel, Cleveland. Twenty-seventh annual convention, Niagara Falls, Ont., June 22 to 24, 1909.

W. A. Sperling has succeeded Henry Eicke as secretary of the Stumpp & Walter Co., New York.

J. M. Clark, of the Leonard Seed Co., Chicago, has been in Michigan, looking over the firm's contract radish.

W. W. Barnard, president of The W. W. Barnard Co., Chicago, is seriously ill and threatened with blood poisoning.

The peas in Wisconsin and Michigan are looking well, but are coming ahead slowly because of continued cool weather.

The Chicago and western seedsmen en route to Niagara Falls will leave Chicago at 3 p. m., Monday, June 21, via the Wabash R. R.

The Nebraska growers have every hope of good yields of vine seeds this season, the start having been made under good soil conditions.

The indications are that the meeting of the American Seed Trade Association at Niagara Falls next week will be one of the largest of recent years, though many well known men in the trade will be absent, some in California and an unusual number in Europe.

Conrad Appel, of Darmstadt, Germany, has sent members of the trade in this country copies of his revised private cable code, considerably amplified from the first edition. The American Seed Trade Association will shortly issue a new code, the old one having become obsolete.

The New York and southern New England delegation to the seedsmen's convention at Niagara Falls will leave New York city on the Empire State Express, via N. Y. C. R. R., Monday morning, June 21, at 8:30. President Watson S. Woodruff, of Orange, Conn., will be with the party. Parlor car seats have been reserved for quite a number, and other reservations may still be made.

Francis Brill takes pride in the fact that he is the pioneer of the great cabbage seed industry of Long Island. He says that until he began business there in 1870, "not a pound of seed of any description was grown in Suffolk county, N. Y." His entire career as a seedsman, however, covers a period of fifty years, in Newark, N. J., from 1858 to 1870 and on Long Island from 1870 to date.

June 8 the onion seed and set district around Chillicothe, O., was visited by one of the heaviest hail storms in the history of the county. Schilder Bros. say: "Fortunately, we only had fifteen acres of onion bulbs planted in the path of the storm. These were heading out nicely and were completely ruined. We had three different varieties in the fifteen acres, composed of White Silverskin, Red Wethersfield and Southport Red Globe. Our seed acreage in other districts is looking quite well to date, but is beginning to show the effect of too much rain."

Reports of damage by drought to seed crops in France are believed to be exaggerated.

Boston seed houses doing plant trade are still busy; the season has been ideal from their point of view.

W. E. Cahill, of the Stumpp & Walter Co., New York, is convalescent after seven weeks of illness in Boston.

The California growers say crops are looking pretty well, though each, if urged, will admit the others are not quite up to his own.

New England growing districts have had a good season for the start of the onion seed crop, but of course the critical time is at the finish of the crop.

The government statistician figured out that 90.9 per cent represented the condition of the onion crop of the United States June 1, as against 92.1 per cent a year ago.

At Chicago June 15 timothy seed was dull. September was offered at $4. Country lots were quoted at $2.75@3.80. At Toledo clover seed was, cash, $6.40; October, $6.90; December, $6.90; March, $7.00. Timothy, prime, $1.95. Alsike, prime, $8.00; August, $8.25.

It becomes more and more evident that the outcome of the tariff revision will not be determined until the President's signature actually is on the document. There is plenty of chance yet for changes which will upset the schedules in which the trade is interested.

IMPORTS.

The imports of seed through the port of New York for the week ending June 5 were as follows:

Kind.	Pkgs.	Val.	Kind.	Pkgs.	Val.
Annatto	6	$ 62	Grass	219	$2,117
Canary	600	2,311	Millet	225	598
Caraway	350	84,622	Mustard	50	411
Clover	166	2,239	Other	..	3,263
Fenugreek	21	202			

In the same period the imports of bulbs, trees and plants were valued at $4,187.

DUTCH BULB TRADE.

The following figures relate to the bulb trade of Holland during the years 1907 and 1908:

Imports from—	1907. Tons.	1908. Tons.
United Kingdom	547	359
United States of America	205	199
Germany and Austria	48	37
France, Belgium, Italy, Spain, Portugal and Greece	446	340
Other countries	27	31
Total	1,273	966
Exports to—		
United Kingdom	6,341	5,029
Germany and Austria	3,968	4,179
Sweden, Norway and Denmark	1,049	1,183
Russia	361	430
France, Belgium, Italy, Spain, Portugal, Greece and Turkey	718	743
United States of America	2,825	2,730
Other countries	17	39
Total	15,279	14,333

A rapid advance in the volume of trade has occurred since the year 1898, when the imports amounted to only 552 tons, and the exports reached 6,902 tons.

"In drawing conclusions from the above figures," says the Horticultural Advertiser (English), "it must be taken into consideration that they comprise all

Mushroom Spawn

Read these unsolicited testimonials from a Grower and a Gardener.

From MR. THOS. JONES,
PONDTAIL NURSERY, FLEET, HANTS.
I have no hesitation in saying without exception yours is the best Spawn I have ever handled. I state this after 40 years' experience.

From MR. C. MOORE, THE GARDENS,
FRENSHAM PLACE, FARNHAM, SURREY.
I am delighted with the Mushroom Spawn. It has turned out the most productive I have ever had, the beds having yielded heavy crops for three months.

kinds of products which form part of the bulb trade in the fullest sense of the word. Further, it must be borne in mind that consignments by parcel post are not included, although it should be stated that their number is decreasing; it has been the practice of late years to send parcels packed in bulk to various forwarding agents abroad for distribution to the several consignees, and such consignments are included in the exports shown above.''

SWEET PEA SOCIETY.

Additional Prizes.

A communication from Harry A. Bunyard, published in the Review of June 10, page 10, contained the names of five firms that had offered prizes, to be competed for at the first annual exhibition of the proposed National Sweet Pea Society of America. Mr. Bunyard, who is secretary pro tem. of the new organization, states that the following additional prizes have now been offered:

Class F—Henry A. Dreer, $10 in gold for the best ten vases of sweet peas, Spencer or Unwin flowered, in ten varieties.

Class G—Henry F. Michell Co., largest and best vase of mixed sweet peas, $5.

Class H—W. A. Burpee, for the best vase of waved or Spencer type sweet peas, introduced in 1909, first, $5; second, $3; third, $2.

Class I—J. M. Thorburn & Co., for the best fifteen vases of sweet peas, first, $10; second, $7.50; third, $2.50.

Class J—Watkins & Simpson, London, England, for the best three vases of sweet peas disseminated in 1909, first, $5; second, $3, third, $2.

Class K—F. R. Pierson Co., three vases sweet peas, three distinct colors, first, $5; second, $3; third, $2.

Class L—John Young, best vase sweet peas, crimson, first, $3; second, $2; third, $1.

Class M—Jerome B. Rice, best vase sweet peas, white, first, $3; second, $2; third, $1.

IOWA SEED LAW UNPOPULAR.

That the general assembly of Iowa is as nearly capable of deciding whether the moon is inhabited as it is to pass a law regulating the purity of farm seeds, was the statement made by E. E. Faville at the annual convention of the Iowa Seed Dealers' Association at Des Moines, as reported by a Des Moines newspaper.

The Iowa seed law is distinctly unpopular with the Iowa seed dealers. Mr. Faville likes to think himself their champion, for he prints a farmers' paper that carries a lot of seed trade advertising. The statement of Mr. Faville was made as a result of a general agreement among the fifty men who attended the seedsmen's open session, that the present law is class legislation, and that it should apply to the farmer as well as to the seed dealer. The law provides that seeds sold by dealers shall be up to a certain standard, and exempts the farmer from the penalty.

It was shown that the average farmer pays no attention to whether the seed offered for sale to the dealer is free from weed seeds. He is allowed to sell seeds where he pleases, and as a result, the fields of his neighbors are frequently sown with thistle, foxtail, and other noxious growths. Mr. Faville was called upon to tell his experience on the subject.

''In my opinion, the law regulating the purity of farm seeds should apply to the farmer as well as to the dealer,'' he said. ''I am convinced that it is not altogether the latter's fault. While the members of the general assembly have opinions of their own on certain subjects, they know about as much on the seed question as one of those who inhabit the moon. The law certainly should

MILWAUKEE, WIS.

be changed, and the farmer, as well as the dealer, held responsible."

Practically all the speakers were agreed that the law should apply to farmers. It was shown that in the fifteen prosecutions begun during the last year, all the seed was furnished by farmers.

The legislative committee of the Iowa Seed Dealers' Association consists of H. A. Johns, Sioux City; C. N. Page, Des Moines, and B. H. Adams, Decorah.

ST. LOUIS.

The Market.

Business with some of the florists last week was good; others say that there was nothing going on except for funerals. There was a lot of work for school commencements, but it will be at an end this week. The weather is becoming hot, the good old summer time is upon us, and our season is ended. The hot weather is telling on the quality of the stock as we see it coming in at the wholesale houses. Everything in season is plentiful, and the wholesalers must sell cheap in order to make room for the next shipment. The prices that some of the roses and carnations brought last week hardly paid the express charges.

Sweet peas are a big glut in all colors. Lily of the valley had a good call, there being a good many weddings. Candidum lilies are also coming in heavily. Among other outdoor flowers coming are cornflowers, daisies and gladioli, also a few extra good peonies. In all greens the market is well supplied.

Club Meeting.

The Florists' Club held its regular monthly meeting Thursday afternoon, June 10, in Bowman's hall, with all the officers present. The meeting was fairly well attended, the total number present being twenty. The trustees reported that they had engaged Romona park in which to hold the club's annual picnic July 21. Full details of program and other arrangements will be made known at the July meeting, which takes place three weeks before the annual event.

William Smith, who has charge of the club's S. A. F. affairs, announced that he had arranged with the Big Four railroad for a special car and rates to Cincinnati for the convention. The trustees were unable to find a new meeting place, and it was decided to remain in the old quarters until the fall. The treasurer's report showed a good balance to the club's credit.

The question box brought out a few interesting discussions. Secretary Bentzen reported quite a few delinquent members on his books, who will be notified to pay by next meeting. Before adjournment, President Young announced that at the next meeting of the club the nomination of officers will take place and the

election the following month, and instructed the officers of the club to use every effort to bring out a large attendance, and all present to do the same. The next meeting will be held Thursday afternoon, July 8, at 2 o'clock.

Various Notes.

Carl Beyer was laid up last week with his old complaint, rheumatism, but at last accounts was up again.

E. A. Kalisch says he will have to postpone his summer trip a few weeks, the cause being that the stork visited his home and left a sixteen-pound boy. After two weeks all three will make the summer trip.

John Connon, of the Connon Floral Co., says that they will rebuild all of their houses this summer. He reports a good business season.

W. C. Young and Eugene Michel were visiting their friends in the south end recently, and say they all look prosperous.

Theo. Klockenkemper, who formerly owned the Brix place on Mead street, says he will move this fall into his new residence in the city, where he will have a private conservatory of his own.

William Bouche, the landscape gardener, has just completed the private place of Charles Stockstrom, which is one of the most beautiful places in the south end. It required an outlay of $1,000. Mr. Bouche will visit New York this summer.

Ludwig Zimmer, the Biddle market florist, will leave next week for Hamburg, Germany, to settle up his father's estate. Mrs. Zimmer will look after his business in his absence.

John Young and his family will leave this week for a trip to Atlantic City, where they will spend the summer.

Edward Buechel, of the Riessen Floral Co., is taking quite an active part in the Turners' trip to Cincinnati this month.

Fred Ammann had a busy week at his Alton, Ill., store Friday and Saturday. He had all he could do for the funeral of William E. Smith, president of the Illinois Glass Co. More flowers were used for this funeral than at any funeral ever held in Alton.

Robert Graham, 22 years old, a florist from Carrollton, Mo., tried to kill himself Wednesday, June 9, on account of a girl with whom he had quarreled. He is at present in a serious condition at the City hospital.

Frank Fillmore says he will wreck his old rose house this summer. This is one of the oldest rose houses in the city. Mr. Fillmore has to make way for a strip of sixty feet which he recently sold.

The Engelmann Botanical Club held its last meeting until the fall Monday evening, June 14, in the Central High School building, at 8 o'clock. Dr. S. M. Coulter, of the Shaw School of Botany, read a paper on "The Relation Between Physiographic Conditions and Plant Life." It was decided to hold two more field meetings during the summer. The meeting was well attended.

G. Reising, representing L. Baumann & Co., Chicago, called on the trade last week with florists' supplies.

Simon Maloney, a representative of the American Forestry Co., Little Lake, Mich., called on the local trade last week, booking green orders. J. J. B.

A. W. Murray has issued a neat embossed card announcing the removal of his store from 3026 Easton avenue to 1254 Union boulevard, two doors south of Page avenue.

Grow Your Own PEON—A IR

PRICES LOWER ON ROOTS
MORE MONEY IN FLOWERS
ORDER NOW FOR SEPTEMBER DELIVERY

We can make this unparalleled guarantee, and never have the trouble that some dealers complain of about their stock not proving true to name, because we **never** ship a peony plant that has not **already bloomed on our place.** Any peony plant is much surer to bloom, and will be twenty per cent stronger, if moved in September, so that new rootlets may form before freezing down. This gives a great advantage to home-grown stock over imported plants, which invariably come too late. The prices in this list are for stock packed for shipment. We begin filling orders early in September.

WHITE PEONIES

	Size	Per 12	Per 100
Alba Sulfurea—Very large, creamy white, bomb shape	Divided	$ 7.00	$ 50.00
Boule Blanche—Pure spotless white	Divided	3.50	25.00
Boadicea—Deep creamy white, very large, very fragrant	Divided	1.50	12.00

PACIFIC COAST.

BUDDED ROSES IN POTS.

Complaint is often made by California nurserymen that budded and grafted roses are hard to handle in pots. It is no uncommon thing to see a great percentage of apparently healthy roses commence to die backward shortly after they are potted, while another part of the same lot of stock, when left in the ground, continues to grow and thrive at an entirely satisfactory rate. This is more noticeable with some kinds than with others, but all budded stock that is handled late in the season and is allowed to get dry a time or two seems to have this disagreeable feature.

The cause of this can be readily figured out if the grower is apt at making deductions. It might be well to remark, first, that under the same conditions a rose will die no more quickly in a pot than it will in the ground. Note that the conditions must be nearly or quite the same. The great trouble with all dealers who handle budded roses in central or southern California is that they let them get too dry. It is easier to give a plant moisture enough when it has all the surrounding soil to draw from, as it does when planted in the ground. When it is cramped in a pot the conditions are quite different. No matter how often the pot is watered on top, it usually is quite dry a few minutes afterward, and, with this hot, porous bandage around the roots, it quickly fails in the task imposed on it, and a dry top results, with perhaps a batch of suckers from the wild stock to take its place afterward.

Roses in pots should be plunged deep in the ground, pot and all, and then copiously watered. Should they be started when planted, trim them back fairly well, as should also be done if they show any signs of dying back from any cause. Never attempt to grow budded stock in pots unless this is done, as it is almost impossible in the dry climate of California to keep the roots sufficiently moist if the pots are allowed to stand on the surface.

This will remove the prejudice that many gardeners have against handling budded stock for pot growing. On their own roots, such varieties as grow well that way will stand more abuse than budded stock. But with most of our best selling sorts it is impossible to produce a plant in the same length of time on its own roots as when budded on some hardy, suitable wild variety, and we consequently have to depend on the latter way.

G.

SAN FRANCISCO.

The Market.

Since Memorial day, business has been fairly good, principally due to the closing of the schools. It seems to be the proper thing more than ever this year, in providing for the expenses incidental to the graduation of the numerous classes of young ladies, to devote a considerable sum to bouquets and baskets. In addition, June weddings have started out well. In spite of the proverbial hard times, many are willing to take a matrimonial chance, and the florists always benefit thereby, even if the more concerned parties do not. But these factors have tended to make heavy demands on light colored stock, and although the growers are keeping the retailers well supplied, it cannot be said that many flowers go to waste.

As an example, I might mention an instance that occurred in town during the last week. One of our largest schools decided to have the graduating flowers consist of large bunches of Liberty roses. A committee was sent to interview all the leading dealers. It was found that the entire available stock was not more than half enough to supply the wants of the hundred or more graduates. A call was made on the surrounding towns and, by strenuous buying, one of our leading firms finally was able to fill the order.

Sweet peas continue to be the best selling of the cheaper flowers. They are not so uniformly long-stemmed as they were a few weeks ago, and the price has fallen to about 50 cents per dozen bunches, but they are used in large quantities by the stores and hucksters alike. Valley has proven to be a better seller in June than it was in May, and the growers who have been complaining all spring about the light demand have had no cause for worry during the last few weeks. Lilium longiflorum continues to be sent into town in good quantity, and moves well. The scarcity of the commoner kinds of outside stock continues, but is not quite so noticeable as it was during Memorial day week.

Over in Oakland, Alameda and Berkeley, business is quite as good as in San Francisco, and everyone agrees that it is better than that of a year ago.

Various Notes.

Ernest Matria, who opened a store on Sutter street, above Grant avenue, closed it after he had conducted business about a month, and the premises will be devoted to another line of trade.

L. O. Beery & Son have consolidated their Oakland branch with that of San Francisco, and will continue business at the latter place. L. O. Beery will shortly take a trip to Europe in search of hardy ornamental trees, of which he makes a specialty.

The California Nursery Co., of Niles, Cal., is erecting a new plant house, 15x100 feet. The firm reports a prosperous season's business.

J. G. Lewis, manager of the plant department of Gill's Floral Depot, Oakland, is on a visit to southern California. Mr. Lewis will inspect the principal nurseries before returning.

The Oakland Floral Co. has closed the store purchased several weeks ago from N. Rolleri & Co., of Oakland.

GROWING BAMBOO IN CHICO.

Early in the present year, W. W. Tracy, superintendent of the National Plant Introduction Garden, at Chico, Cal., received at San Francisco a shipment of 140 tons of bamboo clumps. This consignment was selected with great care, in various parts of Japan and China, by William Hill, of the Department of Agriculture, and represented about thirty of the most valuable sorts. A great many of the ornamental varieties were purchased from the Yokohama Nursery Co., of Yokohama, Japan, while some of the largest cane producers were procured in sections of the country where such particular kinds flourished.

Ten freight cars were required to transport these bulky clumps from San Francisco to Chico, and it is the intention of the government to spare no effort to acclimatize and encourage the planting of this most valuable timber plant. Some of the sections of the stems, when cut across at each joint, can be used for a bucket and hold from two to three gallons. Other kinds are recommended for the making of furniture, garden fences and shading mats.

Those in charge of the government grounds are satisfied that at Chico the climatic conditions are perfect for the bamboo, and quite a tract of ground will be devoted to its planting and propagating. Efforts have been made to secure increased appropriations for the plant garden, sufficient to enable the management to make many much needed improvements. G.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F. H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

FRANK KADLEC, nurseryman, formerly located at 177 Johnston avenue, Chicago, has removed to Evanston, Ill.

J. G. HARRISON & SONS, Berlin, Md., are planning on pushing the ornamental stock department of their business.

FLORISTS are steadily adding to their facilities for supplying nursery stock and for doing all kinds of landscape work.

THE Rochester newspapers made a special feature of last week's convention. They know at Rochester the full importance of the industry.

WILLIAM E. FOLEY, a nursery agent at 1849 Irving Park boulevard, Chicago, has filed a petition in bankruptcy, stating that his liabilities are $4,606.48 and his assets $4,511.25.

WILLIAM A. PETERSON, proprietor of Peterson Nursery, Chicago, says this looks to him as though it would be a big year for the sale of peony roots. Some of the better sorts are thus early in strong demand with the growers whose stock can be depended on.

FROM the talk at last week's meeting of nurserymen at Rochester it appeared that one and all had enjoyed an unusually good season—not only a busy one, but a season of more than ordinary length. The growers of fruit trees and those whose specialty is ornamental stock appear to have been equally favored.

STANNARD AND STARK.

F. H. Stannard.

The new president of the American Association of Nurserymen is one of the regular attendants, not having missed a convention for many years. He has been an active worker on association affairs, having last year served as chairman of the transportation committee. In Mr. Stannard's own community he is looked upon as a leading citizen, the nursery being possibly the most important industry at Ottawa, Kan. The business was established in 1879. For many years the firm was Brewer & Stannard, but in 1901 the present head became the senior partner, and the firm name was changed to Stannard & Co. A general line of nursery stock is grown, the extent of the firm's operations calling for the employment of approximately 1,000 acres. Leading lines are apples and apple seedlings, peach, cherry and plum. The firm has cold storage capacity for fifty carloads of stock.

W. P. Stark.

W. P. Stark is president of the Missouri State Board of Horticulture, and is one of the most enthusiastic of orchardists, as well as nurserymen. He is treasurer of Stark Bros.' Nurseries & Orchards Co., of Louisiana, Mo., and an untiring worker in the field of horticulture generally, and the Missouri State Society under his leadership has become one of the strongest bodies of horticulturists in the country.

The Stark firm was established in 1825, and is now being managed by the third and fourth generations of the Stark family. The company has a capital stock of a million dollars, all paid up, and is probably the largest nursery concern in the world. The company grows its stock in nine states. Experience has shown them that no one locality will produce all kinds of stock to the best advantage, and this is given as the reason that the growing end of the business is scattered over such a large territory. The company employs thousands of agents, and also has a large mail order trade, which is increasing rapidly. The past season's business was the largest in the history of the concern. The company is the introducer of Delicious, King David, Senator, Champion, Black Ben, and other apples, the names of which they registered as trademarks, as well as some fine peaches, grapes, etc.

If the association concludes to stick by its first choice, and meet next year at St. Louis, it will find Mr. Stark the right man in the right place.

F. H. Stannard.
(President American Association of Nurserymen.)

THE ROCHESTER CONVENTION.

[The opening of the convention was fully reported in last week's Review.]

Prof. Bailey's Address.

Every member was in his seat on Thursday morning to listen to an address by Prof. L. H. Bailey, of Cornell University, on "The Science Outlook." Prof. Bailey said in part:

"The nursery business has taken on a wholly new character during the last twenty years, consequent to the application of the results secured by investigators in soil fertility, entomology, plant pathology and a dozen other departments of science. The old, haphazard methods have largely disappeared and the mere rule of thumb that is not founded on reason is rapidly passing away. We are beginning to think as individuals and not as masses. You, as nurserymen, must go to the bottom of things if you are to found your business on enduring principles. You have the right to call on experiment stations and colleges of agriculture to help you determine the real facts. If there is San Jose scale, it is a fact which cannot be minimized or alleviated by any kind of explanation or by any sort of certificate. It must be attacked. If the nursery business freely avails itself of the science knowledge at its disposal, it then has within itself the essential elements of self-purification and self-development. We are inclined usually to look on the forces of nature as in antagonism with us, rather than put ourselves directly into line with nature and try to work with her, rather than against her. It is interesting to catch this note through all the history of mankind and in our literature. Forces of nature, as the thunder, the lightning, the storm, the wind, have been thought of as forces which are by nature opposed to us and with which we must necessarily contend. This idea is expressed in our dogmas and in our creeds. I should like to do something, if I can, to enable mankind to overcome its theological fear of nature. We must not shut our doors to nature, but see that we have pure air to breathe,

American Association of Nurserymen at Highland Park, Rochester, N. Y., June 10, 1909.

indoors as well as outdoors. We have developed colleges of medicine, or of disease. We shall sometime have colleges of health.''

Committee on Legislation.

Wm. Pitkin, for the legislative committee, reported calling on Irving Rouse, J. M. Pitkin, J. H. Dayton, Abner Hoopes, W. H. Moon and T. B. Meehan for aid on a trip to Washington that resulted in killing the bill that had almost passed, providing for the inspection of imported nursery stock at the port of entry. At the suggestion of representatives of the government, a bill for a similar purpose but not inimical to nursery interests has been drafted by the committee and is now in the hands of the Department of Agriculture for consideration. The committee had investigated many state laws during the year. The Maine law contains little considered detrimental to nursery interests. Counsel advised that the Montana law cannot be successfully attacked. The unreasonable Wisconsin law has not been enforced. The Pennsylvania law is thought to be invalid; an invitation for a test case was declined. The objectionable North Dakota law was killed in committee. The New York law was reported as having been modified until it could be cited as a model. The California law, as interpreted, practically excludes shipments of peach trees into that state. The Wyoming law is thought open to attack in some of its features.

The committee asked to be given authority to act in securing the passage of a proper bill providing for the inspection of all foreign nursery stock at destination on the premises of the consignee or owner, and for the inspection and treatment of growing nursery stock if it is found to be infested or suspected of infestation with diseases new to the United States. Such power was granted the committee in a motion made by Col. Watrous, of Iowa, and further power was conferred on the executive committee to act on matters arising from hostile legislation in various states.

Other Papers Read.

''Experiment Stations and Fruit Interests'' was the subject of an address by Dr. W. H. Jordan, of the New York Agricultural Station, Geneva. Dr. Jordan spoke of the scope of agricultural colleges at the present time, the ones he is associated with having an annual income of approximately $14,000,000, with a student body of something like ten

W. P. Stark.
(Vice-president American Association of Nurserymen.)

thousand, about 500 reports and bulletins being sent out each year. It requires little effort today to secure reasonable appropriations from legislatures in New York or any other state for the endowment of these institutions, but the securing of such funds should be left to the boards of control of these institutions. It has been unfortunate that the men who have had the responsibility of the scientific and educational management of these institutions have been obliged in some ways to enter the field of politics to secure financial support; their places should be at the institutions, working for the discovery of truth and trying to solve the problems that the discovery of new facts brings before them.

E. S. Osborne, of Rochester, read a paper entitled, ''Relations Between the Grower and Retailer.'' These relations, he said, should be of the pleasantest character, and each should strive to assist the other and protect him, as the success of each is dependent upon the success of the other. The grower should be particularly careful to see that his varieties are not mixed in propagation, and that stock is absolutely true to name. The practice of sending wholesale price lists and surplus lists to the consumer should be discouraged; also sending such lists to professional landscape gardeners who turn over such stock to their employers without an advance in price.

A paper on ''Commercial Peach Orchards'' was read by L. A. Berckmans, of Augusta, Ga., in which he stated that in order to make a success of peach orcharding one must be a good tiller of the soil, understand plant life, know how to kill bugs and fight to a finish those insidious and invisible atoms of destruction known as microbes and fungous germs. Sandy loam, with a porous red clay subsoil, is the ideal soil for a peach orchard. Elevated areas are the most desirable. Prepare soil by removing all stumps, roots and debris, sow crimson clover or cowpeas, then turn under the cover crop, plow deep, plant trees 18x18 feet apart, in two-foot holes. Cultivate thoroughly, raising peas, melons or potatoes among the trees up to the bearing period. Prune two or three times during the growing season, removing all superfluous growth. For the first two years the growth of the orchard should be stimulated by an abundant supply of phosphoric acid and nitrogen. To guard against the peach tree borer, apply a wash of one bushel of quick lime, twenty pounds of sulphur, one gallon of coal tar

Every member was in his seat on Thursday morning to listen to an address by Prof. L. H. Bailey, of Cornell University, on "The Science Outlook." Prof. Bailey said in part:

"The nursery business has taken on a wholly new character during the last twenty years, consequent to the application of the results secured by investigators in soil fertility, entomology, plant pathology and a dozen other departments of science. The old, haphazard methods have largely disappeared and the mere rule of thumb that is not founded on reason is rapidly passing away. We are beginning to think as individuals and not as masses. You, as nurserymen, must go to the bottom of things if you are to found your business on enduring principles. You have the right to call on experiment stations and colleges of agriculture to help you determine the real facts. If there is San Jose scale, it is a fact which cannot be minimized or alleviated by any kind of explanation or by any sort of certificate. It must be attacked. If the nursery business freely avails itself of the science knowledge at its disposal, it then has within itself the essential elements of self-purification and self development. We are inclined usually to look on the forces of nature as in antagonism with us, rather than put ourselves directly into line with nature and try to work with her, rather than against her. It is interesting to catch this note through all the history of mankind and in our literature. Forces of nature, as the thunder, the lightning, the storm, the wind, have been thought of as forces which are by nature opposed to us and with which we must necessarily contend. This idea is expressed in our dogmas and in our creeds. I should like to do something, if I can, to enable mankind to overcome its theological fear of nature. We must not shut our doors to nature, but see that we have pure air to breathe.

American Association of Nurserymen at Highland Park, Rochester, N. Y., June 10, 1909.

ndoors as well as outdoors. We have de eloped colleges of medicine, or of dis ase. We shall sometime have colleges f health."

Committee on Legislation.

Wm. Pitkin, for the legislative committee, reported calling on Irving Rouse, J. M. Pitkin, J. H. Dayton, Abner Hoopes, W. H. Moon and T. B. Meehan for aid on a trip to Washington that resulted in killing the bill that had almost passed, providing for the inspection of imported nursery stock at the port of ntry. At the suggestion of representa ives of the government, a bill for a sim lar purpose but not inimical to nursery nterests has been drafted by the committee and is now in the hands of the Department of Agriculture for considera ion. The committee had investigated many state laws during the year. The Maine law contains little considered detrimental to nursery interests. Counsel advised that the Montana law cannot be successfully attacked. The unreasonable Wisconsin law has not been enforced. The Pennsylvania law is thought to be invalid; an invitation for a test case was declined. The objectionable North Dakota law was killed in committee. The New York law was reported as having been modified until it could be cited as a model. The California law, as interpreted, practically excludes shipments of peach trees into that state. The Wyoming law s thought open to attack in some of its features.

The committee asked to be given authority to act in securing the passage of a proper bill providing for the inspection of all foreign nursery stock at destination on the premises of the consignee or owner, and for the inspection and treatment of growing nursery stock if it is found to be infested or suspected of infestation with diseases new to the United States. Such power was granted the committee in a motion made by Col. Watrous, of Iowa, and further power was conferred on the executive committee to act on matters arising from hostile legisla tion in various states.

Other Papers Read.

"Experiment Stations and Fruit Interests" was the subject of an address by Dr. W. H. Jordan, of the New York Agricultural Station, Geneva. Dr. Jordan spoke of the scope of agricultural colleges at the present time, the ones he is associated with having an annual income of approximately $14,000,000, with a student body of something like ten thousand, about 500 reports and bulletins being sent out each year. It requires little effort today to secure reasonable appropriations from legislatures in New York or any other state for the endowment of these institutions, but the securing of such funds should be left to the boards of control of these institutions. It has been unfortunate that the men who have had the responsibility of the scientific and educational management of these institutions have been obliged in some ways to enter the field of politics to secure financial support; their places should be at the institutions, working for the discovery of truth and trying to solve the problems that the discovery of new facts brings before them.

W. P. Stark.
(Vice-president American Association of Nurserymen.)

E. S. Osborne, of Rochester, read a paper entitled, "Relations Between the Grower and Retailer." These relations, he said, should be of the pleasantest character, and each should strive to assist the other and protect him, as the success of each is dependent upon the success of the other. The grower should be particularly careful to see that his varieties are not mixed in propagation, and that stock is absolutely true to name. The practice of sending wholesale price lists and surplus lists to the consumer should be discouraged; also sending such lists to professional landscape gardeners who turn over such stock to their employers without an advance in price.

A paper on "Commercial Peach Orchards" was read by L. A. Berckmans, of Augusta, Ga., in which he stated that in order to make a success of peach orcharding one must be a good tiller of the soil, understand plant life, know how to kill bugs and fight to a finish those insidious and invisible atoms of destruction known as microbes and fungous germs. Sandy loam, with a porous red clay subsoil, is the ideal soil for a peach orchard. Elevated areas are the most desirable. Prepare soil by removing all stumps, roots and debris, sow crimson clover or cowpeas, then turn under the cover crop, plow deep, plant trees 18x18 feet apart, in two foot holes. Cultivate thoroughly, raising peas, melons or potatoes among the trees up to the bearing period. Prune two or three times during the growing season, removing all superfluous growth. For the first two years the growth of the orchard should be stimulated by an abundant supply of phosphoric acid and nitrogen. To guard against the peach tree borer, apply a wash of one bushel of quick lime, twenty pounds of sulphur, one gallon of coal tar

and fifty gallons of water. Mix the tar and sulphur in ten gallons of water in a barrel, add the lime, keep well stirred. For curculio, spray with two pounds of arsenate of lead added to fifty gallons of Bordeaux. To guard against brown rot, spray well with lime and sulphur, remove all mummified fruit and when in full bloom, prune out all twigs and blossoms affected with rot. Later, spray with Bordeaux mixture.

President Brown appointed the auditing committee as follows: J. W. Hill, Des Moines, Ia., chairman; Orlando Harrison, Berlin, Md., and W. H. Moon, Morrisville, Pa. The auditors later reported the correctness of the financial statements.

C. J. Maloy, for the National Council of Horticulture committee, reported that no funds had been available for the work, and nothing had been done. The subject was passed without further action.

J. M. Irvine, on behalf of the publicity committee, spoke approvingly of the agricultural and horticultural press of the country in their readiness to publish news concerning the coming meeting of the American Association of Nurserymen, giving space freely, even although some of the subjects were somewhat out of their line.

Orlando Harrison, for the committee for coöperation with entomologists, stated that they had accomplished the results sought by them, and, on their request, were discharged.

Officers Elected.

The following officers were unanimously elected:

President—F. H. Stannard, Ottawa, Kan.
Vice-President—W. P. Stark, Louisiana, Mo.
Secretary—Geo. C. Seager, Rochester, N. Y.
Treasurer—C. L. Yates, Rochester, N. Y.
Executive Committee—J. H. Dayton, E. M. Sherman and H. B. Chase.

The committee of vice-presidents recommended St. Louis as the next place of meeting, and the recommendation was adopted, but later the vote was reconsidered, and the question is to be submitted to a letter ballot as to whether St. Louis or Denver shall be chosen.

Following is the list of vice-presidents elected by the various states:

Alabama	W. F. Heikes
Colorado	A. M. Ferguson
Connecticut	J. V. Barnes
Florida	G. L. Taber
Georgia	L. A. Berckmans
Illinois	Guy A. Bryant
Iowa	A. F. Lake
Indiana	J. K. Henby
Kansas	J. M. Skinner
Kentucky	L. E. Hillenmeyer
Maryland	Howard Davis
Massachusetts	Henry Dawson
Michigan	C. A. Ilgenfritz
Minnesota	E. W. Reed
Montana	W. E. McMurry
Missouri	Geo. S. Johnson
Nebraska	Geo. S. Marshall
New Hampshire	John C. Chase
New Jersey	S. E. Blair
New York	William Pitkin
North Carolina	J. Van Lindley
Ohio	J. H. Dayton
Oregon	Mr. Miller
Oklahoma	J. A. Lopeman
Pennsylvania	William H. Moon
South Dakota	Geo. H. Whiting
North Dakota	Oscar H. Will
Tennessee	E. Chattin
Texas	J. R. Mayhew
Virginia	W. T. Hood
Wisconsin	T. J. Ferguson
Mississippi	S. W. Crowell
Utah	B. A. Dix

Protective Association.

The annual meeting of the American Nurserymen's Protective Association was held at Rochester, June 10. The reports of officers showed the year to have been one of increased activity and prosperity, both for the association and its members. Officers were elected as follows: President, J. W. Hill, Des Moines, Ia.; vice-president, W. F. Heikes, Huntsville, Ala.; secretary, Thomas B. Meehan, Dresher, Pa.; treasurer, Peter Youngers, Geneva, Neb.; executive committee, J. W. Hill, Des Moines, Ia.; section No. 1, Charles J. Brown, Rochester, N. Y.; section No. 2, H. B. Chase, Huntsville, Ala.; section No. 3, J. H. Dayton, Painesville, O.; section No. 4, D. S. Lake, Shenandoah, Ia.; section No. 5, E. R. Taylor, Topeka, Kan.; section No. 6, J. S. Kerr, Sherman, Tex.

Retailers' Association.

The Retail Nurserymen's Association held its annual meeting June 10. Officers were elected as follows: President, Charles J. Brown, Rochester; vice-president, F. H. Stannard, Ottawa, Kan.; secretary and treasurer, Guy A. Bryant, Princeton, Ill.

Visit to Newark.

The Jackson & Perkins Co. provided a special train and invited everybody to sample the Newark brand of hospitality June 11. More than 200 accepted, and had a most enjoyable trip.

GROWER AND THE RETAILER.

[A paper by E. S. Osborne, Rochester, N. Y., read at the thirty-fourth annual convention of the American Association of Nurserymen, at Rochester, June 9 to 11, 1909.]

The subject which has been assigned to me by your committee on program is of sufficient range to permit one to talk on indefinitely. I shall not, however, take up a great deal of your time, as I know you are anxious to hear the reports of your committees, attend the other meetings that are scheduled for this afternoon, and also to get in training for the smoker which is to be held this evening.

It has been my pleasure to attend a number of conventions of your association, but in all the papers which have been read and addresses made, little attention has been paid to the retail end of the nursery business. Yet we count among our membership a great many firms the bulk of whose business is retail, the wholesale department being used more to dispose of the surplus stock which any firm doing any growing at all is bound to have.

With all due respect to our wholesale brethren, I believe the time has come when something of interest to the retail nurseryman should come up at all of our meetings, and I hope that in the future the committee on program will arrange for papers that will treat on the

[Continued on page 54.]

Vegetable Forcing.

GREENHOUSE VEGETABLES.

Boston, June 14.—Cucumbers, $2 to $4 box; tomatoes, 20c to 25c lb.

New York, June 14.—Cucumbers, $2 to $3 box; mushrooms, 50c to $1 lb.; tomatoes, 10c to 15c lb.

Chicago, June 15.—Cucumbers, 35c to 75c doz.; lettuce, 10c to 12½ box; mushrooms, 50c to 60c lb.

FORCING STRAWBERRIES.

Please give brief directions for forcing strawberries, as to soil, temperature, best varieties, etc., and state whether the plants as they are supplied by dealers in the early fall can be made to bear during the following winter. E. C. R.

The soil for strawberries should not be too heavy or too sandy—just a medium black loam, containing a little sand and some well-rotted manure. It should be clean, new soil that has not been lying around the houses. If from a pile of compost that has been stacked for a year or so, all the better.

It is usually better to purchase the plants from a dealer early in August than to try to start only a few yourself, but this is the most important part of the business. You want some 2½-inch pot plants, not runners, and they must be of the right kinds. The pot plants are started from runners from the plants in the field, and are grown in the greenhouses in 2½-inch pots until ready to shift or to set out. For forcing, they should be potted into 6-inch pots, if they are well established when received. Plunge these pots in soil, shavings or ashes, in a deep, cold frame, where they will be protected from drying out too fast. Watch them closely and attend to the watering carefully. You must get them well established before fall, or they will not force well. Do not use any sashes or shading over them at all. They should have a good potful of roots and a good crown before cold weather.

After freezing weather, cover them with leaves or straw to keep them from thawing and freezing. Take them into the greenhouse about eight or nine weeks before the time when they are wanted ripe. Hold them cool for a month—about 45 degrees at night and 55 degrees in the daytime. Then raise the temperature 10 degrees until they commence to turn color; then raise it another 10 degrees. The process is similar to forcing bulbs or dormant shrubs.

Few varieties of strawberries are suitable for forcing. The earliest and latest varieties, also the largest and smallest fruited ones, are to be discarded. Bisexual or perfect flowered sorts are to be preferred to the pistillate ones, although The President is a pistillate variety and quite good. Brandywine is hard to beat. W. G.

Vegetable Plants

PARSLEY—$1.25 per 1000.

CABBAGE—Field-grown, all leading varieties, $1.00 per 1000; 10,000 and over, 85c per 1000.

CELERY—White Plume, Golden Self Blanching and Giant Pascal, $1.00 per 1000.

THE PEONY.

[Concluded from page 7]

There is an interminable list of varieties, but there is no need of more than a few dozen sorts. Far better to cull out the list until there is only two or three dozen of the best varieties and grow these in quantity. Far better business will be done by having leading sorts by thousands than by having a handful of plants of each of a big list of varieties.

CURE FOR HAY FEVER.

Among the readers of the REVIEW there must be many others like myself who are annual sufferers with hay fever, and all these will be interested with me in the statement recently made by an old German physician. He said to me, "Find the place where the Old Red peony is in bloom on clay soil June 20 this year, and there you will be free from hay fever this summer." Many hay fever sufferers are able to find a summer refuge, but others are not relieved at places where the majority are free from the disease. Without doubt a large number will be gratified if readers of the REVIEW will watch the blooming of the Old Red peony (officinalis) as above indicated and report through the REVIEW, so that some of us can prove the truth or falsity of the statement as to hay fever sufferers being immune in that locality this summer. P. E. E.

BALLER'S PEONIES.

F. A. Baller, of Bloomington, thinks the drought in central Illinois last fall affected the peonies seriously, but a dozen blooms, in as many varieties, sent the REVIEW did not indicate injury; they included such sorts as Festiva Maxima and Delicatissima of excellent quality. But Mr. Baller says the season was so late with him that many choice sorts were not in until the second week in June. He has a number of seedlings that look good to him; one a deep pink with broad guard petals, the whole flower of unusually even color, and two large fringles of different shades of red.

GROWER AND RETAILER.

[Concluded from page 52.]

nursery business from the retail standpoint.

I confess I do not know why the committee on program used the words "reliable retailer" in naming my subject, for all retail nurserymen are supposed to be reliable.

Need of Mutual Helpfulness.

The relations between the grower and the retailer should be of the pleasantest character, and each should strive to do his best to assist the other and to protect him, for the very reason that the success of each is dependent upon the success of the other. It is true the grower could say that he could get along well without the retailer, that he could market his trees at perhaps a bigger price than he is getting for them now, but is he fitted by experience and ability to go ahead and do so? On the other hand, the retailer might say that he could go ahead and grow stock and be independent of the grower, but the same question arises again—is he experienced and has he the ability to go ahead and do so? I think you will agree with me that in the majority of cases neither one is fitted or experienced for the duties of the other. Such being the case, then both are helpless without the assistance and good will of the other.

It therefore behooves the grower to protect and assist the retailer, and the retailer to do likewise.

Care in Growing and Grading.

The grower should be careful in the propagation of his stock. He should see that his varieties are not mixed, and above all that the stock is absolutely true to name.

Care should also be exercised in grading, so that the most exacting retailer will have no cause for complaint when stock is delivered to him, for there is nothing more exasperating, when you feel that you have a fine lot of stock coming from someone, than to find on delivery that it is not up to grade either in height, caliper or quality, and delivery of this kind means loss to both parties and an additional expense, not only in money, but a bunch of "cuss words" as well.

On the other hand, the retailer should remember that nature is not as good to some varieties as to others, all of which should be taken into account when trees are being sorted.

Selling Wholesale to Consumers.

There is another point I wish to draw the attention of the grower to, and that is the practice of sending wholesale price lists and surplus lists to the consumer. If there is anything that is altogether unfair or unjust to the retail nurseryman, it is this practice. There is no reason under the sun why a consumer should be able to buy trees and shrubs at wholesale.

You would not expect to go into a wholesale clothing house and buy a suit of clothes at the same price as the retail clothing merchant, and I can see no reason why the consumer in our line should be accorded this privilege. Do not understand me as saying that anyone here makes this a practice, but I have had a number of wholesale lists sent into our office by our agents which have been picked up by them from prospective customers.

If you are in the wholesale business, be satisfied to dispose of your products to the retailer, and I am sure that if the stock is good and prices are right you will have no trouble on this score.

Rights of the Landscape Gardener.

Before closing there is just one question I wish to call to your attention, and that is, whether the professional land-

scape gardener is entitled to receive the wholesale price list of the grower. I would answer this question in two ways: Yes, provided he would resell the stock to those for whom he is employed at an advance, taking a reasonable profit, and there is no reason that I can see why he should not take this profit.

On the other hand, if professional etiquette will not permit him to do this, then I cannot see why he should be allowed to buy stock at wholesale and turn the bills over to his employer, the consumer, permitting him to buy a small quantity of stock for home consumption

DREER'S SPECIAL OFFER OF HARDY HERBACEOUS PEONIES

We are now booking orders for delivery during the latter part of September and October for the following select list of Double Peonies, of which we have an exceptionally large stock of our own growing (except the early-flowering sorts), strictly true to name, all in strong divisions with from 3 to 5 eyes each. Note reduction in price of many of the higher class varieties compared to former offers:

	Per doz.	100	1000
Agnes Mary Kelway—Rosy white guard petals, with deep creamy white center,	$1.25	$ 8.00	$ 75.00
Achillea—Beautiful soft mauve, changing to rose tinted white	1.25	8.00	75.00
Andre Laurier—A fine tyrian rose; late	.85	6.00	50.00
Canary—Fine, large, early white with creamy center	3.00	20.00	
Chrysanthemiflora rosea—A fine, large, deep rose-pink with paler shadings; early	.85	6.00	50.00
Charlemagne—Rose, tinted white; flowers of very large size and good substance	3.00	20.00	
Duc de Cazes—Guard petals tyrian rose; center soft rose-pink; a beautifully formed flower, useful for all purposes	1.50	10.00	90 00
Duke of Wellington—One of the finest double white sorts; very free flowering	3.50	25.00	
Duchesse de Nemours—An extra fine, large, pure white	2.00	15.00	
Festiva Alba—The popular white for cutting	1.50	10.00	90.00
Festiva Maxima—Pure white, center petals tipped red; this is the very large white variety, the most popular for cut flowers	2.00	15.00	140 00
Francois Ortegal—Brilliant crimson maroon; full double flower	2.00	15.00	140.00
Grandiflora Rosea—Brilliant rosy carmine; large and double	3.00	20.00	
Grandiflora Rubra—Deep crimson carmine; large and full	2.00	15.00	
Lady Bramwell—A beautiful silvery rose of large size and fine form	1.50	10.00	90.00
Louis Van Houtte—Brilliant crimson maroon; good size and free flowering	1.50	10.00	90.00
Humei—Rosy carmine, fine, large flower; late	1 25	8 00	75.00
Madame Forel—Bright deep pink, shading lighter towards the edges	3.50	20 00	
Ne Plus Ultra—Violet rose guard petals, center mauve rose, with lighter edges.	.85	6 00	50.00
Paganini—Light solferino red with lighter center	1.50	10.00	90.00
Pomponia—Guard petals rosy mauve; primrose yellow center changing to creamy white	1.50	10.00	
Rosea Elegans—Guard petals silvery rose; center creamy white suffused with rose; a fine, large flower	1.50	10.00	90.00
Zoe Calot—White, suffused with delicate rose	1.50	10.00	90.00

PEONIES IN MIXTURE

Double White—Mixed sorts	.85	6.00	50.00

at the same price as the retailer pays who buys in large quantities.

Ladies and gentlemen, I thank you for your attention.

INDIANAPOLIS.

The Market.

The week has shown quite a change over the previous one in the flower market. Plenty of stock of all kinds is coming in and business is only just fair. Roses and carnations are showing the effects of the warm weather. Beauties, Killarneys and sweet peas are selling well. Lilies, feverfew, valley and candytuft sell slowly. Some peonies are to be had, but the local season is about over. The plant trade still hangs on. Good geraniums are scarce and Boston ferns are at a premium. The florists at the flower market report business only fair.

Various Notes.

Mr. Bletcher, of Cincinnati, spent a few days with friends here this week.

B. Fohl has accepted a position with the Oak Hill Greenhouses at Lebanon.

E. A. Nelson has been cutting some fine longiflorum lilies.

Alfred Pahud has leased his greenhouses to his daughter and three sons and intends to take a rest. The younger Pahuds intend to incorporate and Charles Pahud, who returned last week after a year's stay in Denver, will act as manager.

Martin Reukauf, of Bayersdorfer's, paid us a visit last week.

Thomas Hart, the veteran grower, reports this the best season he ever has had. Mr. Hart makes a specialty of hardy perennials and has worked up a large trade in this line.

Clarence Greene, of A. Wiegand & Sons, has accepted a position in the choir of one of the north side churches.

H. L. W.

PEONIES AT PARIS.

At the annual May exhibition of the French Horticultural Society, Aug. Dessert, Chenonceaux, was awarded a gold medal for peonies. The group contained 108 varieties of tree peonies, thirty-six Japanese and sixteen seedlings. Favorite, a large single, salmon-rose colored flower; Balzac, double rose, and Chanticleer, a large double blush flower, were among the best. Lemoine & Sons, Nancy, exhibited Pæonia hybrida La Lorraine, with large double finely-formed flowers of a pleasing shade of yellow.

YOUR paper has proved very beneficial to us this season through our advertisements.—J. B. SHURTLEFF & SON, Revere, Mass.

PEONIES

Orders for fall delivery are now being booked. Send yours in as early as possible. Below we give a list of our finest offerings for the fall of 1909.

MILWAUKEE.

The Market.

There was not much doing the first four days of last week, for it rained, but things took a turn for the better the remaining days. In fact, the latter part of the week was so good as to counterbalance the quietness of the first half. While a few commencements have taken place, it is still a little early for the bulk of work in that line; the banner days are generally in the last week of June.

Various Notes.

The Imperial Floral Co. is the name of a firm, consisting of two Greeks, which has opened a flower stand in the Plankinton hotel building. Up to a short time ago, J. Chacona, of this city, conducted this stand.

A brief visit to Schneck & Bliese, Waukesha, Wis., found things much changed since last fall, at which time a fire ruined all stock, two greenhouses, the barn and office building. Everything is now in fine shape, and they say that the spring trade, especially for Memorial day, was away ahead of expectations.

The following called on the trade: Fred Lautenschlager, of Kroeschell Bros. Co., Chicago; Mrs. Hinchliffe, Racine, Wis., and Mrs. Miller, of the Racine Floral Co., Racine, Wis.

The window boxes which graced the river front last year are again in evidence. E. O.

CLEVELAND.

The Market.

This market suffered a serious overstock last week, about five times as many flowers being received daily as there was any demand for. The consequence was a slump in prices and carloads of stock for the street faker, who was in his glory.

About the only shortage was in red roses and Beauties. Peonies were plentiful and carnations were received by the carload. Some of the west side retailers held carnation sales on Saturday at 20 cents per dozen, and great quantities were moved in this manner.

Various Notes.

Peter Nichols, of the Euclid Arcade, started last Tuesday for an ocean trip to Greece, his old home, where he will spend two months visiting acquaintances and his aged mother, who has not seen him for sixteen years.

Miss Fannie L. Evans, of the Cleveland Cut Flower Co., is spending two weeks at Geneva, on the lake.

Knoble Bros. report a busy week, having had large funeral orders, as well as a good cut flower trade.

C. A. Bramley, of Superior avenue, reports the largest Decoration day and spring planting trade he ever had. He found it impossible to fill orders as fast as received.

Cliff & Son had, among other work, a six-foot broken column of solid white carnations, with a garland of red roses trailing around it from top to bottom.

Frank Piggott, of Meyers avenue, reports his spring trade as the "best ever," being about sold out of good bedding stock. B.

Fulton, Ill.—McKee & Preston have purchased several lots in the south side addition, and are about to erect a greenhouse 28x250 feet. Mr. McKee is a young man from Morrison, and Mr. Preston hails from Dixon.

Herington, Kan.—Charles Rissman is building a greenhouse here and will grow stock for the trade. A local newspaper says that Mr. Rissman owns half a block of suitable ground, has plenty of money with which to operate the business, knows just how it should be run and is bound to make it pay.

PITTSBURG.

The Market.

While business was in a sense good for this time of the year, no one appreciates it. There were weddings and numerous other things going on all the week, and as Sunday was Children's day in all the churches, there was a heavy demand the last of the week. But in spite of all this, there were so many flowers that what were sold were hardly missed out of the immense stock coming into the city. While the total of sales was all right, yet, owing to the fact that stock sold so cheap and that no one cleaned up, everyone swore business was "rotten."

But this week sees the beginning of the end, as roses and carnations will both shorten up, for roses must be replanted and, owing to the prevailing custom of planting carnations in the houses, they are not allowed to remain on the benches as late as in former years.

The peonies and iris from outside are done. There will be storage peonies for some time, however, and no doubt we will soon be looking for gladioli and asters. Indoor sweet peas are "all in," and the frequent rains have been spoiling the outside stock, so that good peas have been scarce.

Various Notes.

The Pittsburg Rose & Carnation Co. is grading for another house, 50x400 feet, which will be ready in time for planting in carnations.

G. Bate, of Cleveland, the Misses Kidd, of Beaver, Pa., and Martin Reukauf, of Philadelphia, were visitors.

Hoo-Hoo.

SPRINGFIELD, MASS. — George Miellez, son of the late Adolph Miellez, who has been for the last nine years with D. J. Castle, at Torrington, Conn., has opened at 85 Main street an office as advisory horticulturist. With him will be associated his brother, Frederick. The young men had the fortune of a thorough education in their art from their father. At present they have no grounds of their own, but it is their purpose to sustain the name of Miellez as practical growers of plants.

LEXINGTON, KY.

The Market.

Summer has arrived at last and we have had an abundance of rain in this locality. Everything is growing nicely and outdoor flowers are plentiful.

Roses and carnations are plentiful and are slow sellers. Outdoor sweet peas are good and plentiful and meet with an excellent demand at present. Some good snapdragons are being cut by some of the florists and come in handy for funeral work. All green goods meet with a satisfactory demand. The plantsmen are all well pleased with spring sales this year.

Thousands of chrysanthemums are being planted this week. The stock, taking it as a whole, is looking well.

Various Notes.

Lucien Le Clere, of the South Broadway Greenhouses, is cutting thousands of outdoor sweet peas at present and is supplying Honaker, Keller and several out-of-town florists.

R. H. Tacke, superintendent of parks, is an extremely busy man at present.

H. F. Hillenmeyer, the local nurseryman, attended the meeting of the National Association of Nurserymen at Rochester, N. Y. Among others who went from Kentucky were Dieterich & Bros., of Maysville; William Spears, of Oakview; J. W. Green and F. N. Downer, of Bowling Green, and A. F. Donaldson, of Warsaw.

Out-of-town florists in the small neighboring towns dispose of quantities of cut flowers and send to this city for most of the stock. Lexington is becoming quite a cut flower center. BLUE GRASS.

ALTOONA, PA.—R. A. Begalke has had a particularly busy season, with a better trade than last year, and his sales would have been still greater if he had not run short of stock.

Asparagus Sprengeri

We have about 1000 fine plants in 4-inch pots, which we want to close out at $7.00 per 100; $60.00 per 1000.

These are fine plants for planting window boxes or vases, or for planting on benches to cut from later on. Plants are in fine condition, and big value.

ORCHIDS!

There is no reason why all of you grower-experts should not try us and see with your own eyes the handsome Orchids we handle, and at such low prices. We call your attention to the special sale on the following three varieties: **Cattleya Mossiae,** imported plants, $40.00, containing 450 bulbs; **C. Percivaliana,** 9 to 12, $1.00; **C. Gaskelliana,** 9 to 12, $1.25. No less than two new growths, which we guarantee will pay the purchase price, as they are visible in the sheath. Same varieties, 12 to 18 bulbs, $1.75; 18 to 25 bulbs, $2.50. The largest plants have 3 to 5 new growths. We are true importers and wish to be acquainted with all of you. C. labiata, C. gigas, Sanderiana and others, shortly.

Osmunda roots.

WM. MATHEWS, Utica, N. Y.

LENOX, MASS.

The regular meeting of the Lenox Horticultural Society was held Saturday, June 5, and was largely attended. President A. Jenkins was in the chair. J. Cant, J. Green, W. McGregor and L. C. Peters were elected active members.

An exhibit on which special praise was bestowed was a magnificent vase of extra fine varieties of Odontoglossum crispum, exhibited by A. J. Loveless. The flowers were remarkable for their size and substance, some of the spikes being fully three feet in length. They certainly reflect great credit upon the grower, and were unanimously granted the society's highest award, a first-class certificate and cultural commendation. Mr. Loveless gave a short talk on their culture, which was greatly enjoyed by all present.

E. Jenkins was awarded a diploma for a fine vase of Golden West gladioli.

We were all pleased to welcome back George Foulsham, who has lately been appointed to take charge of W. B. O. Field's estate at Lenox. Mr. Foulsham gave an interesting description of his sojourn at Savannah, Ga., and also spoke of his recent visit to the Messrs. Charlesworths' orchid nurseries, England.

The following firms have generously donated premiums toward our fall exhibition: A. T. Boddington, R. & J. Farquhar & Co., W. W. Rawson & Co., Scott Bros., Bay State Nurseries, Bon Arbor Chemical Co., Pierson U-Bar Co., Howard & Morrow, Hews & Co., Lager & Hurrell, Peter Henderson & Co., W. E. Marshall & Co., Chas. H. Totty and Julius Roehrs Co. G. H. I.

Fairbury, Neb.—The Fairbury Nurseries, of which E. M. Hurlburt is proprietor and C. M. Hurlburt manager, plans to put up greenhouses to cover 7,500 square feet of ground.

Meadville, Pa.—Geo. W. Haas & Son say that trade for Decoration day came with a rush, and the rush continued until everything, both in plants and cut flowers, had been sold out. Hydrangeas, azaleas, gloxinias, geraniums, primroses, and everything else in bloom, were sold out. Carnations took the lead in cut flowers. In all the firm's thirty-five years of business, no such run had ever before been experienced.

Roses, Climbing Lady Gay, Crimson Rambler, D. Perkins, 5½-in. to 6-in. pots, 25c, 30c to 40c.

REMEMBER

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa,** and those we offer were imported the Spring of 1908.

Florists should bear in mind that no garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, a consignment of small sizes just in, per Steamer Manitou, 35c, 40c, 50c and 60c.

Kentia Forsteriana and **Belmoreana,** just arrived, per Steamer Manitou, from Antwerp. Price for good stuff, 75c, $1.00, $1.25, $1.50, $2.00 each.

"Mein Haeuschen steht im Gruenen."

Look! look! look! Godfrey Aschmann's world-wide-known, pure white, fragrant moonvine, **Ipomoea Noctiflora,** with flowers as big as a saucer, 4-in pots, staked up, $12.00 per 100; 3-in., $8 00, and 2½-in., 5c in dozen or 100 lots.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

Godfrey Aschmann, West 1012 Ontario St. **Philadelphia, Pa.**

When Writing Advertisers

DETROIT.

The Market.

Business opened up nicely the first part of the week, and increased in volume toward the end of the week, until Saturday, when stock was not nearly equal to the demand, excepting perhaps in carnations, and J. F. Sullivan helped clean up on these with a sale at 25 cents per dozen, selling about 12,000 in this manner.

Peonies are now arriving in thousand lots, mostly from Mount Clemens. The quality of flowers is fine.

Bedding stock has had a big run this season, and now is pretty well cleaned up. Vincas and ivy it is almost impossible to obtain.

Various Notes.

The flower stand of the Crowley-Milner Co., formerly Pardridge & Blackwell, is no more, having died a natural death. Business has been lagging since the opening several years ago until a few weeks ago, when Miss Anna Schulte, the lessee, gave it up as a bad job.

Louis Charvat is doing a nice business in a small way up in the east side settlement. Saturday was a big day in the churches, and he had all the orders he could handle.

The Lorraine Flower Shop is also out of business. Hubert Pierce lost all interest in the stand when the new drug firm took hold of the store, and he was no longer able to obtain window space or even daylight. At present writing the stand is going begging.

Miss Ella Reisdorf, of Schroeter's, has been spending her Sundays at Keewaden Park, near Port Huron. H. S.

ASHTABULA, OHIO.

Roger Griswold has begun work on his new range of greenhouses and expects to complete them this summer. Mr. Griswold's property, a part of which forms the site of the new houses, is located on South street, between the Pennsylvania and Nickel Plate tracks, and is a plot about thirty acres in extent.

Twelve houses, 300 feet long, will be constructed. The frames are already up. The Pennsylvania railway has built a siding to the location, and the work on the houses will progress rapidly.

ASTERS.

ASTERS! ASTERS! ASTERS!
Great surplus in aster plants. I want to use the space now occupied by my aster plants and will sell 2,000,000 plants at a great bargain. Plants are large and fine, grown from my own and James Vick & Sons' seed. Never had better plants. While they last, $1.75 per 1000; $15.00 per 10000; $120.00 per 100,000. We have every new aster of merit we know of. Order anything, but be quick about it.
BARNES' GARDENS, SPENCER, IND.

Crego asters in mixture of shell-pink, white, and rose; Rosbach's Selected, purple and lavender mixed, white separate, $2.50 per 1000. Cash with order.
We have tried most of the varieties of asters, offered the last several years, with the view of securing an ideal florists' strain. Last year we acquired the Crego and found it the nearest approach to a chrysanthemum and the most satisfactory of any we ever tried.
A. & G. Rosbach, Pemberton, N. J.

100,000 aster plants. Late Branching, in white, pink and lavender, Queen of the Market, Ostrich Feather, Comet and Victoria, in best mixed colors. Good, strong plants, ready to plant out, at $2.50 per 1000; 5000 lots, $2.00 per 1000. Seed saved from the largest and most double flowers only.
Gustave Pitzonka, Bristol, Pa.

ASTER PLANTS.
Semple's, Vick's and Queen of the Market, grown from the best seed, fine plants, in white, blue and pink, $2.50 per 1000; 5000 for $10.00.
J. C. Schmidt, Bristol, Pa.

Aster plants. Fine plants for June planting. Semple's, Carlson's, Giant Comet, separate colors, $2.50 per 1000; 5000 and over, $2.00 per 1000. S. W. Pike, St. Charles, Ill.

THE IRIS.

Oh, beautiful, beautiful flower!
The ward of the sunbeam and shower,
In garments of woven delight,
Of the sunset, Aurora and light,
While over thy beauty there plays
Such delicate tinting and rays,
Such blending of color and shade,
Well becoming a heavenly maid.
Ethereal, lovely and sweet,
Thy presence we joyously greet.

Thy mother, fair iris, in beauty supreme,
Took all her rich garments of loveliest sheen,
The robes of the rainbow, flower garden of air,
Of bewildering beauty, resplendently fair,
And made for her child such a dazzling dress
No daughter of royalty e'er could possess.

Though her form seems so fragile, yet wondrously brave,
Away in the north land where fierce tempests rave,
She wakes from her sleep in her cradle of snow
And beams on the world with a radiant glow.
Away on the plains in the drought and the heat,
She is cheerfully waiting admirers to greet.
To her fairy presence must ever belong
The tributes of praise and the rapture of song.

THE DEAN HOLE MEDAL.

On the death of Dean Hole, who had for so long been the president of the National Rose Society of Great Britain, the members of the committee to perpetuate his memory, set themselves the task of raising a sum of money for the purpose of founding a medal, to be known as the Dean Hole medal. It was decided that the amount raised should be invested, and that with the income derivable therefrom medals should from time to time be presented to those who have rendered substantial service in the cause of the rose. A sufficient sum having accumulated to admit of the first medal being struck, the selection of the recipient has engaged the attention of the executive committee for some time past, and at the meeting of the general committee, held May 18, the medal was, by unanimous vote, awarded to the Rev. J. H. Pemberton, in recognition of the merits of his work entitled "Roses: Their History, Development and Cultivation," which was published by Longmans, Green & Co. last year.

RHODODENDRON SOULIEI.

Rhododendron Souliei is a miniature species from China, with relatively large flowers of bright rose color suffused on a pale ground. The leaves are ovate-cordate and in the young state covered with a glaucous bloom. They are then reddish, as also are the young shoots, but afterwards they become green. The widely-expanded segments are divided not lower than one-third their depth, the blooms being about four inches in diameter. A plant of Rhododendron Souliei about nine inches high recently was exhibited by Messrs. Jas. Veitch & Sons, before the Royal Horticultural Society, London, and was awarded a first-class certificate. The plant has proved perfectly hardy in their Coombe Wood Nursery.

COMMENDABLE FERNS.

Eleven months ago, says Wm. R. Prince, of the Norton Manor Gardens, near Taunton, England, I secured plants of Nephrolepis Piersoni, N. Todeaoides and N. Whitmani. They were in 5½-inch pots, but have been shifted until now they are in 14-inch pots. The plant of Pierson is at the present time more than seven feet through and five feet high, while the specimen of Todeaoides is five feet through and four feet high. This latter variety forms an excellent specimen plant. The habit is stiff and the fronds are of a pale green color; they are fringed and beautifully tasseled. The fronds of N. Whitmani are not so densely divided as in N. Todeaoides. My specimen of this plant is five feet six inches wide and four feet high. Another fern worthy a place in gardens is Nephrolepis exaltata superba. The compost I use for the ferns consists of one part turfy loam, one part leaf-mold, a small quantity of bone meal, and a little of some approved fertilizer, with a fair sprinkling of broken crocks and lime rubble. Microlepia speluncea is another fine decorative fern that soon develops into a large plant. Davallia Braziliensis, for which H. B. May & Sons received an award of merit from the R. H. S. in 1907, is an advance in the davallia section. The habit is close, and the fronds finely cut. Among other ferns doing remarkably well in these gardens are Asplenium Belangeri, Polypodium irioides ramo-cristatum, and Adiantum polyphyllum (cardiochlana).

Greenhouse Heating.

POEHLMANN BROS. Co., Morton Grove, Ill., this season burned approximately 15,000 tons of coal, costing in the neighborhood of $50,000.

THE Martin Grate Co., 283 Dearborn street, Chicago, has issued a humorous booklet, paraphrasing the old nursery rhyme, "The House that Jack Built," in the interest of its rocking grate, now used in many greenhouse establishments.

HEATING HINTS.

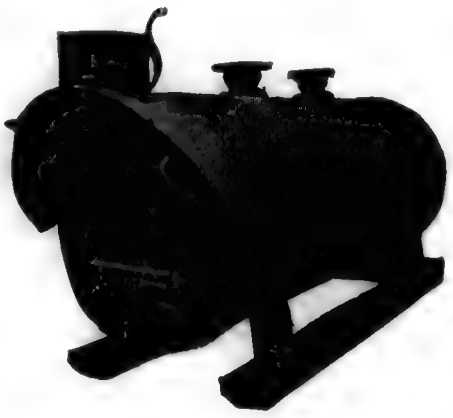
Do not screw a valve open or closed as hard as you can. It injures the threads and in a short while you can not shut it tight when you need to.

Keep all your piping tools clean and well oiled. Put them in a box or on the wall, where anyone can lay his hand on them in a hurry.

Give the night fireman an 18-inch Stillson and a 12-inch monkey wrench of his own. Do not let anyone but him use them. He will know just where they are then, when a need arises in the middle of the night.

Keep the valve stuffing boxes well packed. It keeps the steam and water in the system and not out in the air.

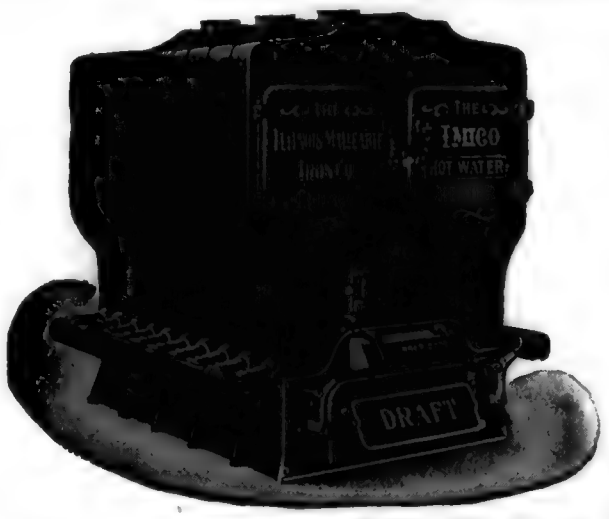
Pipe that is 1¼-inch is the best size to use in a steam system. Use 2-inch pipe for hot water.



In a steam system, to figure the running feet of 1¼-inch pipe a main will carry, square the inside diameter and multiply it by four and by 100. Example: A 5-inch main will carry 5×5×4×100, or 10,000 running feet. To find the size of a main when you know the running feet, divide the running feet by 100 and by four and the square root will be the diameter of the main required. Example: 10,000 running feet of 1¼-inch pipe, to find size of main required; 10,000÷100=100÷4=25, of which the square root is 5, the size of the flow.

G. T. E.

HOUSE IN COLD CLIMATE.



We are putting up a house 22x120, facing south, and have a boiler-room on the east end as a continuation of the house as far as the roof is concerned. The coal shed is north of the boiler-room, with a three-foot gangway between with the exception of a passageway three feet above ground. The height at the ridge is twelve feet six inches. The eaves are five feet six inches and there are thirty-two inches of glass on each side below the eave; all glass on the west end. The house runs east and west; grounds are level, with slight slope to the southwest; boiler-pit in northeast corner of boiler-room set in a concrete pit three feet below level. The chimney is 16x16 inches, in the southwest corner of the boiler-room. The house has three benches, each five feet wide, and we want to use the house mainly for carnations; our idea is to use hot water. We use a lignite coal

here, somewhat softer than the soft coal, and there are days when the thermometer goes to 30 degrees below zero. We would appreciate your idea as to heating this house. H. F. C.

I would put three 2-inch pipes under each bench and four on each side wall. Run straight up from the boiler high enough to clear your head in the greenhouse. Run the flow pipe through the center of the house, one 5-inch or two 2½-inch. At the far end drop into the heating pipes across the end and run the heating pipes into a main cross return of the same size as the flow. Run the return to the boiler, pitching toward it. Keep the return as low as possible. Pitch the flow toward the far end of the house. G. T. E.

TANK ON TOWER.

I wonder if any reader of the REVIEW can give me advice as to which is the cheapest and best kind of tank to put up to give me enough pressure of water for two or three houses and to act as an expansion tank for my boiler. Would you use wood or galvanized iron? How high must the bottom of it be above the top of the greenhouse, and should it be covered? What should a tank cost, set up complete, without the piping into the greenhouse? A. W.

I would put up a wooden tank (cypress) on a 60-foot tower. You do not say how much water is consumed on your place per day, so that I could not give an accurate estimate, but should think about $150 would cover the cost. The tank would have to be protected from freezing. Do not be afraid to put up a tank of good proportions, so that you will not have to erect another when the place grows larger. G. T. E.

AMHERST, MASS.

Agricultural College Affairs.

The commencement season is near at hand, and the class work in floriculture has been finished. The demand for graduates has been greater than the supply. Several changes have been introduced in the course to be given by the floricultural department during the coming year. Up to the present time the course has been given only in the senior year, but next year it will be extended to the junior year.

During the first half year a practical course in greenhouse management will be given. There will be no definite lecture work, but the students will be taught to do the practical work which goes with the management of a commercial establishment. Students electing this course will be expected to arrange their hours according to the needs of the work. During the second half year the instruction given will be in greenhouse design, construction and heating.

The course for the first semester of the senior year will be in the care and

management of greenhouse crops, design work and the retail trade. During the second half year the instruction will be in spring greenhouse crops. In this course it is intended to give more attention to the treatment of outdoor herbaceous material, which should form a prominent feature of florists' work. The short course in floriculture will be given during January and February, the same as last year.

The department has recently received from the Morehead Manufacturing Co. a complete model of its return steam trap for greenhouses. This model will be used for classroom demonstration.

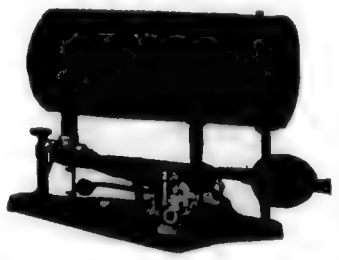
E. C. Canning, head gardener of Smith College, visited the floricultural department recently. He is especially interested in the college at the present time, as he has a son ready to enter the freshman class this fall.

F. G. Bartlett, superintendent of Forestdale cemetery, Holyoke, was ready for a holiday after the Memorial day rush and spent June 2, with his foreman, visiting the various departments of the college. Mr. Bartlett said the demand for bedding plants in Holyoke was never greater than this year.

SPRINGFIELD, OHIO.

Current Comment.

Peonies were just a week too late for Memorial day trade.



Rose plants have been sold out more completely than for several years, and late buyers in search for desirable varieties or long lists are being quite unexpectedly disappointed. Some will probably learn that the earlier placing of orders is essential to the securing of certain desired sorts of roses.

Harry C. Reeser is once more in the harness and has associated with himself a partner who will undertake the sale of the products of the new copartnership, under the style of Reeser & Youngstrand. On the five acres of desirable land located at the corner of Johnson avenue and Clay street, buildings have already been erected and put into operation, including four greenhouses, each 20x120, with a shed 18x85, to which an office and sleeping room are attached. The walls of the houses are of concrete and everything is substantial and modern in construction. Ferns and pelargoniums are planted under the glass, while in the field are cannas, vincas, tritomas, etc., which will be offered at wholesale. Mr. Youngstrand is an experienced newspaper man, and his ability in this direction will no doubt prove effective in making the firm and its output known to the trade.

The retail catalogue trade continues unusually late, some concerns being from ten to fifteen days behind orders. This is due chiefly to the fact that it is practically impossible to secure an adequate amount of experienced or competent help during the rush of spring and early summer business. Difficulty is also being experienced in obtaining roses in sufficient quantities to supply the demand for collections. Ge Dale.

New Castle, Ind.—Otto Benthey, manager for the Frederick J. Benthey Co., says that the local retail business is rapidly increasing in volume and is paying well for the attention given to it. Decoration day business was especially good.

LOUISVILLE, KY.

Current Comment.

Business last week was rather quiet. The Shriners' convention was held and about 25,000 visitors were in town, but it did not help the trade much. Almost every business house in the central part of the city was decorated with flags and bunting, and some good windows were to be seen. Along the route of the parade the streets were illuminated with electric signs and lights galore. Thursday night, at the Armory, the big ball was held, and a few flowers were sold, but not enough to think about. Almost all of the florists had displays of some kind for the occasion, and some were first-class.

Flowers of all kinds are getting to be quite plentiful. A lot of garden flowers are coming in, such as phlox, stocks, snapdragons, sweet peas, etc. Roses and carnations are getting smaller all the time.

We have about finished planting out, and the boys are getting ready to plant mums and carnations in the greenhouses. Carnations in the fields are doing nicely.

K. R.

GLEN COVE, N. Y.

The Nassau County Horticultural Society held its regular monthly meeting June 9. Vice-president James Elmslie occupied the chair in the absence of the president, John W. Everett. Final arrangements were made for the summer show to be held in Pembroke hall, June 23. This is the first time the society has held a summer show, and everything possible is being done to make it a success and an annual feature. Harry Turner, of Castle Gould, Wm. Millar, of Oyster Bay, and W. Marshall, of Glen Cove, were appointed to judge the show. Preliminaries were discussed regarding the dahlia and chrysanthemum shows. Mr. Dean offered a silver cup for the best collection of dahlias shown on long stems, the idea being to encourage the cultivation of the dahlia as a cut flower. The fall exhibition is to be held in the last week of October, instead of the first week of November, as formerly. J. H. Roslyn was elected to active membership.

The judges of the monthly exhibits, which were of a high order, were Messrs. Duthie, Garrett and Holloway. The awards of points were as follows: Paul Reul, on lettuce, 91⅔; H. Gaut, for peonies, 88⅓; V. Cleres, for tuberous-rooted begonias, 88⅓; G. Wilson, for outdoor roses, 86⅔. G. Wilson and P. Reul were awarded cultural certificates for vegetables. Special attention was called to the extra fine cauliflower in Mr. Wilson's exhibit, and on request he told briefly how it had been grown. V. Cleres was awarded honorable mention for May King lettuce. S. G. Trepass exhibited a yellow carnation seedling. W. H. M.

UTICA, N. Y.

A visit to the beautiful home of the veteran Peter Crowe, on Genesee street, is an inspiration. Over twenty-two acres of woodland, field and lawn are here combined in as complete a residence and surroundings as one could wish to see. The big house has lately been thoroughly refurnished with every modern convenience. Here, with wife, daughter and grandchildren, the good-natured and genial 250-pounder is enjoying, as he puts it, the happiest years of his eventful life. He is a young man yet—only 67.

This is the home of Adiantum Croweanum. Nine houses are devoted to its production. Many thousands are shipped daily to New York, and also to Boston, Rochester, Buffalo, Detroit, Syracuse and Chicago. The popularity of this fern constantly increases.

Mr. Crowe still grows a few roses, for his own and his friends' gratification, and his hand has not lost its cunning. White Killarney he considers the greatest find of the century. Mr. and Mrs. Crowe will attend the twenty-fifth anniversary of the S. A. F. at Cincinnati.

Business in Utica is in a generally flourishing condition, with conservatism marked and no new building for this year projected.

Frank Baker has a handsome store, with greenhouse connections on Court street. He has been elected president of the city's common council, and is making a fine record. The list of florists in Utica numbers about thirty.

The regular monthly club meetings are held at the homes of the members in rotation. In Dr. Roland's office, the doctor being a practical florist, a meeting was held June 9, and members from Rome, Ilion, Herkimer, Little Falls and Clinton attended. A clam bake and outing were discussed and a fall flower show was projected. The club is setting a good pace for such organizations everywhere to follow.

Brant Bros., who rented the rose houses owned by Peter Crowe, fifteen in number and covering some 65,000 square feet on Sunset and Mildred avenues, have added, on their own ground adjoining, six large houses, each 20x150, all connected, for the growing of carnations. This gives them a total glass area of about 100,000 square feet. The members of the firm were formerly residents of Madison, N. J., and are nephews of the late L. M. Noe, of that city. Their output is handled by Moore, Hentz & Nash, in New York city. They grow Brides, Maids and Killarney and all the popular new carnations. They are young men of sterling character and should make of this enterprise, ultimately, a great success. J. A. Shaw.

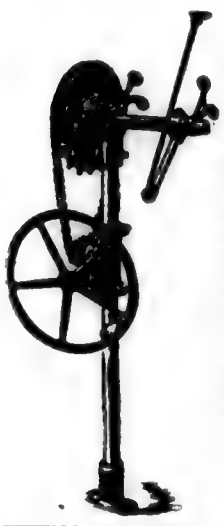
Think This Over



The largest ranges of Iron Frame, private greenhouses in the country, such as P. A. B. Widener's, Ogontz, Pa., Hon. Whitelaw Reid's, White Plains, N. Y., H. C. Frick's, Pittsburg, we have erected. If we can do these big things so well, we are all the better equipped to do the small ones. It is because we do build the small ones so satisfactorily that we are asked to build the large ones. We are just now starting on another immense job for J. B. Duke, at Somerville, N. J.

Advance Ventilating Apparatus

There are no better castings made anywhere than what we are using in our line. There are no better principles, no better mechanism than is found in our goods. Hence the reason our customers stay with us and the reputation of our machine brings us other customers who, in turn, help us to sell to others. We have one price for all. Our net prices tell the tale. All we need, all we ask, is a trial order. We know that you will come again.

NEW BEDFORD, MASS.

The Market.

Trade was rather slack last week. Carnations are now quite plentiful; they retail at 35 cents per dozen. Roses now retail at $1 and $1.50 per dozen. Sweet peas are still coming in of good quality; $1 per hundred blooms is the retail price. Funeral work is good, using up lots of short stuff. Saturday night the faker was with us again, selling carnations and roses at ridiculously low prices.

Geraniums are still in good demand; also the bedding plants.

About all of the growers have their young carnation stock planted out. This has been a good season for them so far, with numerous rains in this section. Mum plants, asters and other summer flowering stock are being planted now.

Various Notes.

E. H. Chamberlain had some nice Bride gladioli last week. He is showing some nice sweet peas.

William S. Brown is also cutting some fine sweet peas.

Wm. P. Peirce is showing some nice carnations in his window.

J. H. Cleary is handling a full line of goldfish, as well as flower and vegetable seed.

Davenport & Son report a good call for geraniums.

William Livesey is potting up large batches of smilax, preparatory to supplying the trade.

E. Y. Peirce is still cutting nice Fair Maid and Boston Market carnations.

W. L.

LEBANON, MO.—Ernst Beck is erecting another greenhouse, 27x157 feet.

The Market.

Trade has been holding up well. There has been a brisk demand for bedding plants ever since Decoration day, as there were some who did not get in on the early rush. There has been a great deal of funeral work lately, and that, with the commencement exercises, etc., has kept things moving at a good pace.

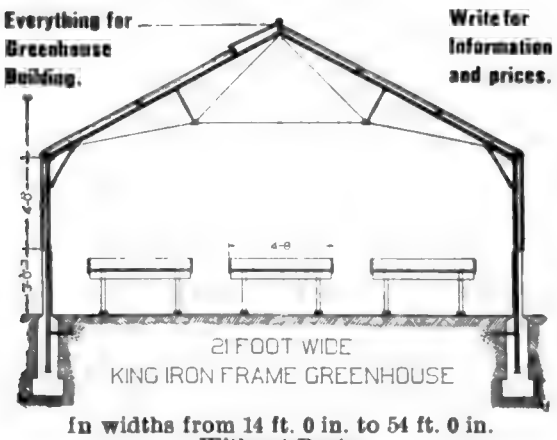
Stock has been of rather poor quality lately, and is showing the effects of the hot weather. Roses have suffered most and they are small compared with a few weeks ago. Carnations have been coming in heavily, and some days it looked as though we would have a glut, but, taking it all around, they have fared as well as could be expected during the month of outdoor roses. Sweet peas are coming in now from outdoors. While there is no great quantity, the quality is good. The demand for valley for bridal bunches has been heavy, and there are still quite a number of weddings booked for June.

Various Notes.

The Florists' Club was entertained by the Munk Floral Co. Tuesday evening, June 8, at the firm's greenhouses. There were about twenty-five who braved the storm we had that night, to go to the gathering, and they were well repaid for going, as "The Munks" did credit to themselves in handling the crowd of visitors and in setting before them so fine a lunch.

Sherman Stephens reports the most of the planting done at Greenlawn, and he is well satisfied with the spring business.

William Graff has his place remodeled and everything is finished in white. He has put in a shallow ice-box in place of the large one he had, which adds greatly to the appearance of the room.



E. Metzmaier reports everything sold out clean, with hardly enough left for stock.

The Franklin Park Floral Co. reports an excellent business this spring.

Mrs. E. M. Krauss has given up her store for the summer. As her lease had run out, she decided to wait till fall before looking for a new location. J. M.

ALLENTOWN, PA.—E. N. Kroninger, whose range is located between this city and Emaus, is adding two greenhouses, each 50x400 feet, of Lord & Burnham construction. They were to be finished by June 1, but the work was much delayed by the rainy weather.

THE RETAIL FLORIST.....

EGYPT IN A WINDOW.

The accompanying illustration gives an inadequate idea of a window decoration which attracted much attention at the store of Jacob Schulz, Louisville, Ky., during the recent Shriners' conclave. The entire front of the window was devoted to a miniature reproduction of the sphinx, the pyramids and the surrounding Nile country. In the illustration the Nile does not show, nor do all of the pyramids at the right, of which there were two. The Nile was not the typical one, but a clear stream stocked with goldfish, with a caravan of nobles crossing a footbridge. In the photograph no flowers are shown, and without these the window would not be considered as meeting the chief requirement of a florist's display. But the flowers were there in the original; the photographer in order to get even the least detail in his picture of the special display found it necessary to curtain it off in front of the flowers. The window is a deep one and back of the arrangement for the benefit of the visiting Shriners was one of cut flowers and blooming plants—for the benefit of those who might become his customers.

Mr. Schulz has been making special effort in the way of window decoration and has found that he was amply repaid for all the thought, work and expense, of which considerable of each was entailed, put into his displays. The Shriners' window attracted possibly more comment than any yet devised.

DIFFICULTIES IN DESIGN WORK.

Preserving the Outline.

Prominent among the awkward points of the every-day design work is the disregard of the fundamental lines of the design frame, or the direction that these lines take. To illustrate: Take the empty frame of a wreath; the direction of the outside and inside circular wires makes the outline of the design. If they were run in any other direction than circular, or did not meet in the center, we would have something else than a wreath. If the two ends were shortened and pinched together at opposite points, we would have a crescent. If the round form of the wreath were lengthened and a section were cut out and the points turned outward, the product would be a horseshoe. If bent broader for half the distance around and flared at two wide-apart points, with a base added, we would have a lyre. All of which goes to illustrate that the directions which the principal wires take form the lines of the design.

The minute that the wires are covered, however, a lot of people forget what they are aiming to make. After cutting all the stems of all the flowers to be used six inches or twelve inches long, they are stuck in the moss straight up and out till they fairly meet in the center of the piece. All that is necessary to complete the piece is to attach a label. It is commendable to make a good showing for the money, but when a wreath gets so fluffy and puffy that the center is lost it is time to call a halt and return to first principles.

Making a Wreath.

When a wreath is to be made, cover the frame first with a soft green all around, on top and both sides. Stem the flowers as long as the size of the piece and the quality of the flowers will permit, and lay them half reclining in the direction of the shape of the piece. Train the stems along to follow the lines of the wreath, rather than allow them to extend out like spines on a cactus. You will thus have the flowers in a more graceful position and they can be just as loosely arranged, while they are raised to a height consistent with the size of the piece. Fill in under the long stems scatteringly with shorter flowers.

Of course, with an extremely small piece no good designing can be carried out. For this reason, as well as the loss and gain account, little designs should not be attempted.

Every flower in a piece need not be considered a part of the outline of the design. Some flowers may be used as a part of the background and, as such, are related to the picture part of the design only as a setting. But the whole drift of this argument is: Keep to the lines of the design, even if afar off, as opposed to the common practice of crossing those lines at sharp angles. The piece when completed may be much larger than the mere frame, but let the flower stems be trained to follow its outline and conform to its shape. Most flowers are more graceful, anyhow, when leaning, than in a perfectly vertical position.

A Heavy and Clumsy Effect.

Another disagreeable result of the all-around vertical style is the heavy effect it gives to all except very large pieces, by increasing the width of the pieces out of proportion to the length. While barely permissible in such pieces as a wreath, pillow, broken wheel, gates ajar, or cross, it is clumsy and heavy in a design like a crescent, harp, lyre, basket, centerpiece, or many other outline designs, especially those of slender form.

The decorative cluster of a design, flower or ornamental green, should be carried around the outside and inside edge of the design as well as on the top, as a cross or wreath of ivy, galax, boxwood or other suitable green, covered entirely with the uniform background on three sides, could not be more beautifully finished than with a cluster of long-stemmed roses, lilies, carnations, mums or other good sized flowers, caught securely to the design frame through the green and trained to follow the lines of the design. They can be wired so as to hold in place and pinned to the frame wherever required, under the foliage.

An Art in Cutting Stems.

When it is necessary to cut stems, the designer who plans the piece should be as careful in doing the cutting as the grower is, who insists upon cutting his flowers from the plant just at the proper place. This bars the practice of cutting stems at an even length, as would be done with less effort. If necessary to cut, find a point on the stem below a curve or bend which makes the rose what it is, a little different from all others of its kind.

Equally important with the correct system of designing as regards form, the subject of color again clamors for at-

Shriners' Convention Window of Jacob Schulz, Louisville.

THE RETAIL FLORIST.....

EGYPT IN A WINDOW.

The accompanying illustration gives an inadequate idea of a window decoration which attracted much attention at the store of Jacob Schulz, Louisville, Ky., during the recent Shriners' conclave. The entire front of the window was devoted to a miniature reproduction of the sphinx, the pyramids and the surrounding Nile country. In the illustration the Nile does not show, nor do all of the pyramids at the right, of which there were two. The Nile was not the typical one, but a clear stream stocked with goldfish, with a caravan of nobles crossing a footbridge. In the photograph no flowers are shown, and without these the window would not be considered as meeting the chief requirement of a florist's display. But the flowers were there in the original; the photographer in order to get even the least detail in his picture of the special display found it necessary to curtain it off in front of the flowers. The window is a deep one and back of the arrangement for the benefit of the visiting Shriners was one of cut flowers and blooming plants—for the benefit of those who might become his customers.

Mr. Schulz has been making special effort in the way of window decoration and has found that he was amply repaid for all the thought, work and expense, of which considerable of each was entailed, put into his displays. The Shriners' window attracted possibly more comment than any yet devised.

DIFFICULTIES IN DESIGN WORK.

Preserving the Outline.

Prominent among the awkward points of the every-day design work is the disregard of the fundamental lines of the design frame, or the direction that these lines take. To illustrate: Take the empty frame of a wreath; the direction of the outside and inside circular wires makes the outline of the design. If they were run in any other direction than circular, or did not meet in the center, we would have something else than a wreath. If the two ends were shortened and pinched together at opposite points, we would have a crescent. If the round form of the wreath were lengthened and a section were cut out and the points turned outward, the product would be a horseshoe. If bent broader for half the distance around and flared at two wide apart points, with a base added, we would have a lyre. All of which goes to illustrate that the directions which the principal wires take form the lines of the design.

The minute that the wires are covered, however, a lot of people forget what they are aiming to make. After cutting all the stems of all the flowers to be used six inches or twelve inches long, they are stuck in the moss straight up and out till they fairly meet in the center of the piece. All that is necessary to complete the piece is to attach a label. It is commendable to make a good showing for the money, but when a wreath gets so fluffy and puffy that the center is lost it is time to call a halt and return to first principles.

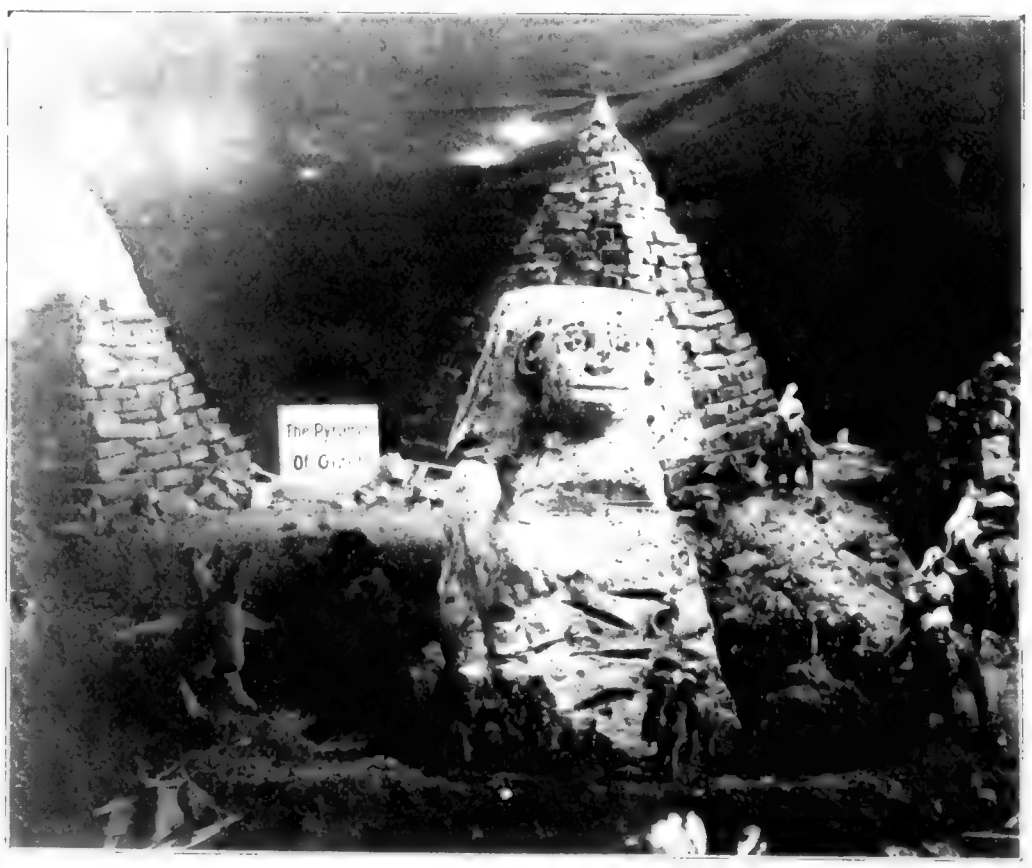
Making a Wreath.

When a wreath is to be made, cover the frame first with a soft green all around, on top and both sides. Stem the flowers as long as the size of the piece and the quality of the flowers will permit, and lay them half reclining in the direction of the shape of the piece. Train the stems along to follow the lines of the wreath, rather than allow them to extend out like spines on a cactus. You will thus have the flowers in a more graceful position and they can be just as loosely arranged, while they are raised to a height consistent with the size of the piece. Fill in under the long stems scatteringly with shorter flowers.

Of course, with an extremely small piece no good designing can be carried out. For this reason, as well as the loss and gain account, little designs should not be attempted.

Every flower in a piece need not be considered a part of the outline of the design. Some flowers may be used as a part of the background and, as such, are related to the picture part of the design only as a setting. But the whole drift of this argument is: Keep to the lines of the design, even if afar off, as opposed to the common practice of crossing those lines at sharp angles. The piece when completed may be much larger than the mere frame, but let the flower stems be trained to follow its outline and conform to its shape. Most flowers are more graceful, anyhow, when leaning, than in a perfectly vertical position.

A Heavy and Clumsy Effect.



Another disagreeable result of the all-around vertical style is the heavy effect it gives to all except very large pieces, by increasing the width of the pieces out of proportion to the length. While barely permissible in such pieces as a wreath, pillow, broken wheel, gates ajar, or cross, it is clumsy and heavy in a design like a crescent, harp, lyre, basket, centerpiece, or many other outline designs, especially those of slender form.

The decorative cluster of a design, flower or ornamental green, should be carried around the outside and inside edge of the design as well as on the top, as a cross or wreath of ivy, galax, boxwood or other suitable green, covered entirely with the uniform background on three sides, could not be more beautifully finished than with a cluster of long-stemmed roses, lilies, carnations, mums or other good sized flowers, caught securely to the design frame through the green and trained to follow the lines of the design. They can be wired so as to hold in place and pinned to the frame wherever required, under the foliage.

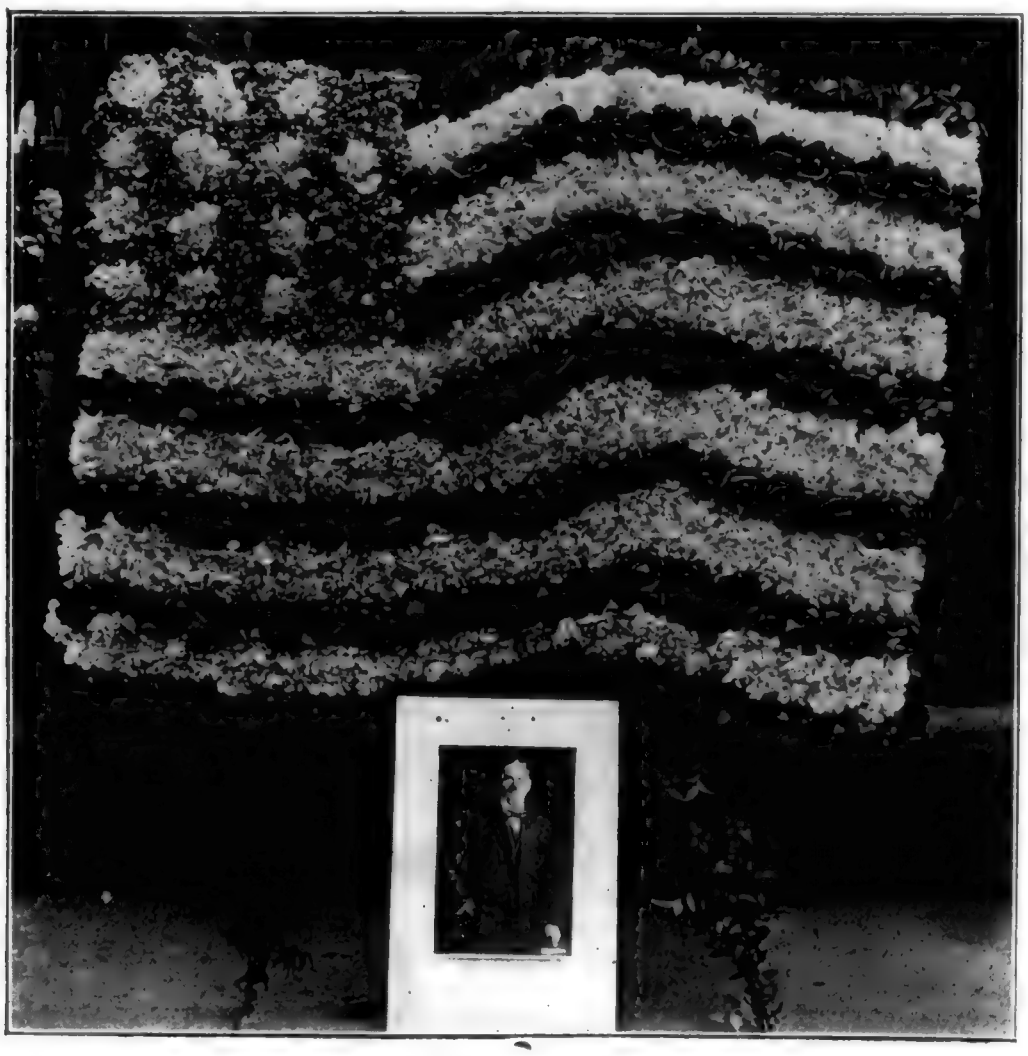
An Art in Cutting Stems.

When it is necessary to cut stems, the designer who plans the piece should be as careful in doing the cutting as the grower is, who insists upon cutting his flowers from the plant just at the proper place. This bars the practice of cutting stems at an even length, as would be done with less effort. If necessary to cut, find a point on the stem below a curve or bend which makes the rose what it is, a little different from all others of its kind.

Equally important with the correct system of designing as regards form, the subject of color again clamors for at-

Shriners' Convention Window of Jacob Schulz, Louisville.

tention. One might think that with the limited number of colors in greenhouse flowers for each season, there would not be many opportunities for blunders in color combinations. But after a glance at some of the show windows or store displays, and the vases of assorted flowers sent out every day, as well as funeral work, the impression grows stronger that one without a native taste in color has made the mistake of his life in choosing this work.



No set of rules or course of instruction can implant the taste within one. Education may develop an artist from a man with a small endowment, and observation and experience may enlarge his sense of color, but he must have the love of it and a keen, discriminative appreciation of its beauty before he can achieve much. A lack of interest in color or an indifference to color harmony is a sufficient reason for choosing some other vocation. A gleam of talent will show itself now and then and eventually grow into a passion for the beauties of color, which shall be sensitive to a slight violation of color harmony and quick in appreciation of even the most delicate shadings.

THE STARRY BANNER.

The flag design is one almost always conspicuous at the funeral of any public man. It is not the easiest of designs to make, because it almost always has a rectangular stiffness that makes it one of the most mechanical of floral reproductions; indeed, it is almost impossible to make anything artistic of such an arrangement. At the same time, the order for the floral flag is almost always the result of the taking up of a collection; it is a big, showy affair that looks to be worth the money, while giving a good profit to the florist.

The accompanying illustration is reproduced from a photograph of a flag made by Saxe & Floto, Waterbury, Conn., for the funeral of Governor Lilly, whose portrait was placed at the bottom of the design, between the feet of the easel. Saxe & Floto endeavored to get away from the straight lines by representing the flag as waving. The stripes were made of Richmond roses and White Enchantress carnations. The blue ground for the stars was of violets, with white carnations for stars. The design was one of the largest at the funeral and gave much satisfaction to those who ordered it, the Business Men's Association of the town.

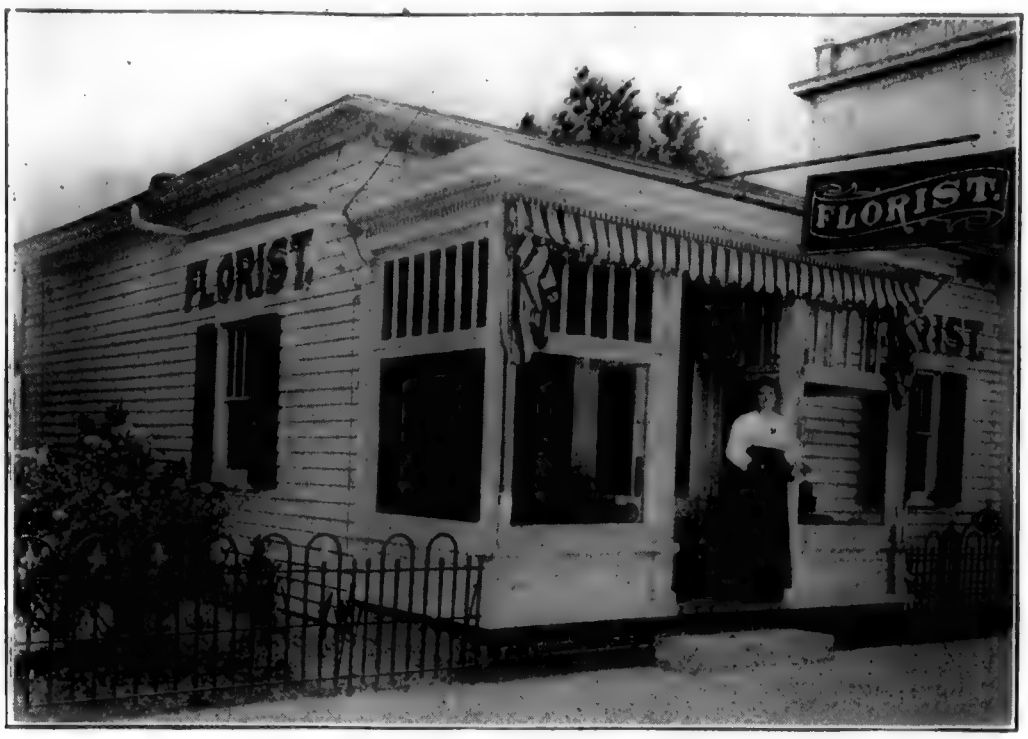
Flag Made by Saxe & Floto, Waterbury, Conn.

SEASONABLE ADVICE.

The Vagaries of the Weather.

Our weather so far this season, here in the state of New York, seems to be unusually changeable, going to extremes every few days. For a day or so it is hot and dry, drying out the ground with great rapidity, owing to the high winds that accompany nearly every change in temperature. By the next day, perhaps, it rains, and down drops the temperature, falling many degrees in a few hours. And how it does rain much of the time! Take our last rain, June 17, for instance—over two inches and a half in about twelve hours. This means a hard packing and washing of the soil, and then when the sun gets to work, assisted by the wind, the soil at once forms a hard crust that is detrimental to all plant growth—so detrimental that the cultivator should be at once started, the crust broken up and the soil gotten into good working order, giving the roots a chance to breathe.

The passing years only confirm the lesson learned long ago, but one that it is hard to teach many people, and that is, that constant, thorough, careful cultivation is worth nearly, if not quite, as much as water and manure, in the successful growth of a plant crop, be it violets, carnations or "garden sass." Yes, I am positive I would rather have an undersupply of water and manure, and what you might call an oversupply of cultivation, than the reverse.



Stirring the Soil.

If you have dry weather, the constant stirring of the soil, keeping it fine and loose, causes it to catch every particle of dew, conserving it for the plants. The loose surface soil also serves as a mulch for the soil underneath, keeping it cool and moist and in shape to receive the dews or any slight showers that chance to come, and as a result you will often be astonished at the growth the plants will make, when it seems too dry weather for anything to do more than stand still.

If you are one of those persons that doubt the full value of this, convince yourself by a careful experiment for one season. Divide a patch into sections, giving one part constant, thorough cultivation and another only your ordinary treatment, having other conditions all alike, and you will be convinced. I will miss my guess if in a short time the contrast is not so great as to attract the attention of even casual observers. And do not let this work slip by from day to day, thinking that as you do not see many weeds in the patch and there is so much else to do, tomorrow will be time enough. Today is the time, and you would better neglect the other thing, whatever it may be, rather than not have your stock for fall planting in first-class condition, as you cannot have it too good for a successful, satisfactory crop.

Cutting the Runners.

Again, violets, like strawberries, can never be depended upon to throw runners just when you would like to have them do so. If you are having the showers that we are having in this section, you will probably find the runners starting before you expect, and as it takes the strength of the plant to strike these, you should keep a sharp lookout for them and remove them at once, otherwise you will not get the heavy, strong, stocky crown that you desire for winter forcing. And again, to reiterate what I have said often before, do not leave this to be done by cheap, careless help, for if you do they will probably tear and break them off in a careless manner, detrimental to the health of the plant, and next winter, if not before, you will awaken to the fact that such help is expensive in the long run. Therefore, if you have not absolutely trustworthy help, that you can rely on to do the work just as you

Store of Carrie M. Terry, Phoebus, Va.

direct, you had better look after this yourself. The runners should be carefully cut off and not pulled or broken, and the oftener you can do this the better plants you will have when housing time comes around.

Hunting for Cut Worms.

The cutworms all about here seem to be an unusually good crop, doing much damage to plants of all kinds, even cutting down potato stalks nearly as large as a pencil. About the best thing to do now is to go over the patch early every morning with care, and if you have a sharp eye you can nearly always locate where they have buried themselves, by the leaf or two that they partly bury where they crawl into the ground. As they only go about half an inch or so deep, they are easily located and you can gather them in and have a funeral without ceremony, but to your own entire satisfaction.

Speaking of these pests makes me wonder if you always remember to use plenty of salt on your manure—in the stables preferably, but if not there, when making up your compost piles. Salt so used is extremely beneficial in many ways, but chiefly in destroying the white grubs, cutworms, etc., and in preventing the manure from burning, thus saving much of its value. Besides, the salt puts the manure into much better shape for plant food, as it rots it so much more quickly and makes it fine and workable.

R. E. SHUPHELT.

TO KILL FLIES.

No flower store, and no greenhouse, should tolerate the presence of flies. A dilute solution of formaline, two teaspoonfuls of the commercial forty per cent formaline added to a soup plate filled with water, makes an efficient fly destroyer. Flies go to it to drink, and die, some in the water, others in the neighborhood of the plate. So dilute a solution as that which suffices to keep down the flies is not enough to produce, by the vapor liberated from it, any harmful effect on people living in the room. The formaline method is free from the gruesome associations of fly papers and other traps which hold their struggling victims, and it may even be turned to ornamental uses, for the dish may be provided with a central wire cage and filled with flowers. Though formaline is poisonous to plants as well as to animals, yet, according to Dr. Hill, cut flowers keep well in it.

TWO GOOD BENCHES.

The Dailledouze Style.

The latest benches built by Dailledouze Bros., Flatbush, N. Y., for carnations should be of interest to all who are engaged in bench building. These benches, while they actually are tables with about five inches of soil, are built like solid beds. There are four five-foot benches in each house. First concrete walls some twelve inches high were built and the space between filled in with cinders. Across the bed thus formed ordinary 4-inch drain tiles were laid end to end, so that they projected some two inches or so over the concrete side walls. Then upon the edges of this solid flooring of drain tiles a 6-inch side wall of concrete was put up. The soil was then filled in upon the tiles as upon an ordinary bench bottom. The effect of having the bench four to five inches wider than the supporting portion of the construction was to provide a recess on each side in which the heating pipes are hung. Dailledouze Bros. have stated that they kept no account of the cost of these benches, and the inference is that they were somewhat expensive to build, but they are practically indestructible.

Bassett & Washburn Style.

At Hinsdale, Ill., Bassett & Washburn have experimented with pretty nearly all types of bench construction, but have returned to a style which few others use and which is thought to have been originated on their place many years ago. They set pecky cypress posts and on top of these run pecky cypress stringers that are 2x4, laid with the 4-inch side up. These stringers are spaced just far enough apart so that one of the ordinary drain tiles just covers from center to center of the inside stringers, coming out flush with the outside stringers. On top of the tiles a 6-inch side board is run to confine the soil. These benches are not specially expensive. The drain tiles cost $14 to $15 per thousand and never wear out. The pecky cypress stringers do not rot and some of those in use have been in the benches for many years. Neither do the posts give out; the only part of the bench which has to be renewed is the side pieces, which rot in time.

IN VIRGINIA.

Phœbus, down by Old Point Comfort, in Virginia, does not lay claim to being a metropolis, but its florist, Carrie Monroe Terry, does a first-class business. As in so many of the resort towns in the historic region on lower Chesapeake bay, the local demand is increasing, and the visitors generally are flower buyers. In the accompanying illustration Mrs. Terry's store is shown, with the windows in which she makes her display of plants and flowers. Last winter Mrs. Terry gave an order to the Weathered Co., of Jersey City, for a greenhouse, by means of which she is increasing her supply, and says the business is this season better than ever.

Mrs. Terry is a believer in advertising, and uses the accompanying rhyme, printed in many different styles of display cards, for bringing her store and her stock to the attention of her people.

FUTURE OF THE PEONY

ITS POPULARITY NOT WANING.

Only Poor Sorts Overdone.

You will hear every now and then from some grower of peonies that the peony business is overdone, or soon will be. Yet this is true: It is already overdone in a way, and that way is growing the poorer varieties in large quantities. It is surprising to hear the encomiums passed by dealers on worthless peony flowers, sorts that should not be grown and offered at this day. Can it be true that the nurserymen, who no doubt distribute more of this product than all others combined, fight shy of the good varieties on account of their cost and praise up and push the sale of the poor varieties, on which they can make a profit that puts Standard Oil to shame? If a dealer's standards are to be gauged by the profits alone in the business of handling ornamentals, then that man has missed his calling. The soap or fertilizer business, while not yielding as many shekels, would probably give him more ease of conscience.

This reminds me of a story that was related at a nurserymen's banquet by one of the craft. He said he had a dream about Mr. A, the president of the association, and Mr. B, one of the little fellows who keeps in the background. In the course of the dream B appears before St. Peter and seeks admission through the pearly gates. St. Peter informs him most emphatically that no nurserymen need apply; that it is a fixed rule; all nurserymen whomsoever are denied admission. While B is lamenting his fate, along comes A, seeking admission. "Certainly," says St. Peter, "walk right in." B turns sharply to St. Peter, saying, "You just told me that no nurserymen were admitted and I see the gates thrown wide open for A." "Yes," replies St. Peter, "but he's no nurseryman; he just thinks he is."

Not in your day, nor your son's day, nor your son's son's day will the peony business be overdone. But this will happen: The buyer will say to Mr. Dealer who offers him Chinensis Rosea, Nobilissima, Fragrantissima, etc.: "Nay, nay, Pauline! None of these! I will buy an Asa Gray or Mlle. Rousseau instead."

There is no question but that up to the present time most of the peony roots that have been distributed to planters should have gone into the discard.

Notes of the Season.

The blooming season this year was twelve days behind 1908. The earliest variety to bloom, L'Esperance, opened May 28. Last year this same variety opened May 16.

Another thing happened. Last year the blooming season, from the earliest to the latest, extended over thirty days, while this year this time was cut ten days.

Another matter that attracted pronounced attention was the fact that the plants that were protected failed to bloom. To illustrate: A couple of thousands of 3-year plants of Mt. Blanc when protected with clover chaff did not bear a single bloom, while the same variety and same aged plants without this protection were a perfect sea of bloom and just a few yards apart. This applied to all varieties alike. Can some one explain why?

Observations on Merit and Demerit.

In going over our fields I made the following notes with regard to varieties:

Achille (Calot)—This is the American Marie Lemoine. The man who sells it under that name should be stood up and lectured.

Andre Lauries (Crousse)—Deep rose color, a good low-priced variety on account of its being the only one of this color and being a late bloomer. Terry's Grandiflora and James Vick are both seedlings of this and show no variations that we can detect.

Asa Gray (Crousse)—This was winner over all competitors at two local shows; flesh pink, mottled carmine.

Albert Crousse (Crousse)—This, to our way of thinking, is a superior variety to any of its color. Every flower comes perfect; color an even, solid Enchantress or seashell pink. If there is a better one of this color, trot it out.

Agida—Where a bright line of color is needed this has no superior that we know of; semidouble, bright red.

Boadicea—This is one of the superb things in peonies that is floating around without any one knowing where it comes from. Not as free as we would like it. Late; white with carmine blotches; high built flower; superb.

Brennus—A good double dark red; not so deep in color as L'Ecletante.

Berlioz (Crousse)—A light shade of red tipped with silver; large flowers and free.

Canari (Guerin)—A good peony with fleshy white guards and light yellow center; strong grower. You will not disappoint any one in selling them this variety.

Charlemagne (Crousse)—After three showers in as many days, the sun coming out after each rain, this variety simply said good-bye till next year; it has too many petals to open properly.

Dorchester (Richardson)—In a class by itself for extremely late light-colored pinks; fine; every bloom erect.

Duc de Wellington (Calot)—Outclassed, in our estimation, by many other whites.

Dr. Boisduval (Guerin)—We know of no better dark velvety red; large double flower; stock scarce. Dessert says this is like Delachei. We have Delachei from several growers in this county. The flowers are semidouble and by no means

This is the first installment of a paper by John M. Good, to be complete in two parts.—Editor's Note.

Peony Mme. Emile Galle.

The Peony Field of Good & Reese Co., with Festiva Maxima in the Foreground.

as dark and rich in color. Dr. Boisduval will make you sit up and take notice.

Duchesse de Nemours (Calot)—Our 10,000 plants of these were a feast for the eyes; each stem bears from three to six flowers; all come perfect; it follows Festiva Maxima and is an invaluable white.

Eugene Verdier (Calot)—Strong, vigorous grower; enormous buds and flowers; in color resembles Albert Crousse; it being a late bloomer, the rains caught it and some of the buds were scalded and did not open properly; when well done is grand.

Eugenie Verdier (Calot)—This is the variety that the Hollanders grew for years as L'Indispensable; then they thought it was Eugene Verdier, and when they found the true Eugene Verdier they discarded this variety altogether, not knowing what it was. How foolish! It will make Eugene Verdier step some to eclipse it. It is a strong grower, free bloomer, flowers of immense size, delicate blush, almost white, and blooms a week earlier than the male namesake. It has waterlily-shaped flowers, while Eugene Verdier is globular. A most superb variety, distinct and beautiful.

Edouard Andre (Mechin)—A dark, rich red; was not as free this year as we would like.

Festiva (Donkelaer)—A dwarf from of Festiva Maxima, blooming one week later; flowers are as fine as its stronger growing child.

Festiva Maxima (Miellez)—For a strong grower, for a free bloomer, for a large flower, for a perfect shape, for the best white, give me Festiva Maxima. It has no peer among peonies. Out of many thousands of plants, every one bloomed and every bloom was perfect. Of course one would not confine his whites to this variety alone, as the later varieties that are good extend the blooming period.

Felix Crousse (Crousse)—Probably taken all round this is the best red peony for general planting. The blooms are large and perfect globes. The color is rich, and it is exceedingly free.

Francois Ortegal (Parmenter)—Say, when any one tells you that this is not a good variety, just tell them I say it's a crackerjack dark red.

Floral Treasure (Rosenfield)—A free blooming, clear delicate pink variety. America need not be ashamed of her productions if they all rank up to this beauty.

Golden Harvest (Rosenfield)—Another American variety to be proud of; always a sure bloomer; a combination of white, pink and yellow; resembles Jeanne d'Arc.

Gigantea.—Claimed by some to be a synonym for Lamartine (Calot). There is but little stock of this peony, owing, no doubt, to the fact of its being so desirable that it has been overpropagated. A beautiful light pink with a silvery sheen; of the largest size; nothing like it in shape or color.

Peony Felix Crousse.

FUTURE OF THE PEONY

ITS POPULARITY NOT WANING.

Only Poor Sorts Overdone.

You will hear every now and then from some grower of peonies that the peony business is overdone, or soon will be. Yet this is true: It is already overdone in a way, and that way is growing the poorer varieties in large quantities. It is surprising to hear the encomiums passed by dealers on worthless peony flowers, sorts that should not be grown and offered at this day. Can it be true that the nurserymen, who no doubt distribute more of this product than all others combined, fight shy of the good varieties on account of their cost and praise up and push the sale of the poor varieties, on which they can make a profit that puts Standard Oil to shame? If a dealer's standards are to be gauged by the profits alone in the business of handling ornamentals, then that man has missed his calling. The soap or fertilizer business, while not yielding as many shekels, would probably give him more ease of conscience.

This reminds me of a story that was related at a nurserymen's banquet by one of the craft. He said he had a dream about Mr. A, the president of the association, and Mr. B, one of the little fellows who keeps in the background. In the course of the dream B appears before St. Peter and seeks admission through the pearly gates. St. Peter informs him most emphatically that no nurserymen need apply; that it is a fixed rule; all nurserymen whomsoever are denied admission. While B is lamenting his fate, along comes A, seeking admission. "Certainly," says St. Peter, "walk right in." B turns sharply to St. Peter, saying, "You just told me that no nurserymen were admitted and I see the gates thrown wide open for A." "Yes," replies St. Peter, "but he's no nurseryman; he just thinks he is."

Not in your day, nor your son's day, nor your son's son's day will the peony business be overdone. But this will happen: The buyer will say to Mr. Dealer who offers him Chinensis Rosea, Nobilissima, Fragrantissima, etc.: "Nay, nay, Pauline! None of these! I will buy an Asa Gray or Mlle. Rousseau instead."

There is no question but that up to the present time most of the peony roots that have been distributed to planters should have gone into the discard.

Notes of the Season.

The blooming season this year was twelve days behind 1908. The earliest variety to bloom, L'Esperance, opened May 28. Last year this same variety opened May 16.

Another thing happened. Last year the blooming season, from the earliest to the latest, extended over thirty days, while this year this time was cut ten days.

Another matter that attracted pronounced attention was the fact that the plants that were protected failed to bloom. To illustrate: A couple of thousands of 3-year plants of Mt. Blanc when protected with clover chaff did not bear a single bloom, while the same variety and same aged plants without this protection were a perfect sea of bloom and just a few yards apart. This applied to all varieties alike. Can some one explain why?

Observations on Merit and Demerit.

In going over our fields I made the following notes with regard to varieties:

Achille (Calot)—This is the American Marie Lemoine. The man who sells it under that name should be stood up and lectured.

Andre Lauries (Crousse)—Deep rose color, a good low-priced variety on account of its being the only one of this color and being a late bloomer. Terry's Grandiflora and James Vick are both seedlings of this and show no variations that we can detect.

Asa Gray (Crousse)—This was winner over all competitors at two local shows; flesh pink, mottled carmine.

Albert Crousse (Crousse)—This, to our way of thinking, is a superior variety to any of its color. Every flower comes perfect; color an even, solid Enchantress or seashell pink. If there is a better one of this color, trot it out.

Agida—Where a bright line of color is needed this has no superior that we know of; semidouble, bright red.

Boadicea—This is one of the superb things in peonies that is floating around without any one knowing where it comes from. Not as free as we would like it. Late; white with carmine blotches; high built flower; superb.

Brennus—A good double dark red; not so deep in color as L'Ecletante.

Berlioz (Crousse)—A light shade of red tipped with silver; large flowers and free.

Canari (Guerin)—A good peony with fleshy white guards and light yellow center; strong grower. You will not disappoint any one in selling them this variety.

Charlemagne (Crousse)—After three showers in as many days, the sun coming out after each rain, this variety simply said good-bye till next year; it has too many petals to open properly.

Dorchester (Richardson)—In a class by itself for extremely late light-colored pinks; fine; every bloom erect.

Duc de Wellington (Calot)—Outclassed, in our estimation, by many other whites.

Dr. Boisduval (Guerin)—We know of no better dark velvety red; large double flower; stock scarce. Dessert says this is like Delachei. We have Delachei from several growers in this county. The flowers are semidouble and by no means

Geraniums

GERANIUMS FOR EASTER

When should geraniums be started so as to have nice, stocky 4-inch plants for Easter? When should the pinching back and disbudding be discontinued? I live in the state of Illinois. L. M. D.

The early part of October is a suitable time to root the geraniums in your state. Farther south a still later date is to be preferred. Many growers err in getting their cuttings too early, during extremely hot weather, such as we frequently get in September, when a large proportion are liable to rot. You can either root your cuttings separately in small pots, using sandy loam, or in flats of clear sand. No shade whatever should be given the cuttings. A position well up to the light, such as a shelf affords, is suitable. After one thorough watering, afford only sufficient to prevent shriveling, until the cuttings are rooted.

For Easter it will be better for you to start your cuttings in 2-inch pots. They will need a shift to 3-inch pots after they are rooted six weeks and can go into 4-inch pots about the middle of February. One pinching will be all that any of the plants require. It must be done according to their strength and not later than the beginning of February. You should discontinue the removal of flower trusses six weeks before you want them for sale. Grow the plants in a light, sunny house, with an average winter minimum of 50 degrees, and be sure to keep them picked over and spaced as they grow. Avoid the use of animal manures in the soil. These promote too much leaf growth. Bone meal will give harder and more floriferous plants, especially where they are wanted as early as Easter. C. W.

A GOOD PHLOX.

Phlox Canadensis, Perry's Variety.

The well-known Phlox Canadensis (syn. divaricata) has always been a great favorite both for the rockery and the herbaceous border. Perry's variety, however, is certainly a great improvement over the old form, and although it is more than four years since it was introduced and given an award of merit by the R. H. A. in England, here in America it is not yet so well known as it should be.

It is a first-class border and rock plant, remarkable for its freedom of bloom and for the light lavender blue color of the flowers, resembling that of Plumbago Capensis. The individual flowers are much bigger than those of the type, and it is readily forced.

Growing in any kind of soil and in positions where nothing else will grow, and producing flowers for over eight weeks, it certainly should find a place in every garden.

It is easily propagated from soft-wooded cuttings, which should be taken in August, when the second growth is some weeks old. When put in a deep frame, with an inch and a half of sand on the top, and shaded until they begin to strike, they will be ready for transplanting into 3-inch pots in three or four weeks and will be fit for sale in the spring. C. Gronloh.

SCREENS AGAINST HAIL.

The illustrations on page 9 are not a "before and after" demonstration, but they are nevertheless a most effective object lesson for those with glass roofs exposed to the elements.

Colorado Springs, Colo., was visited by two severe hail storms earlier in the month. June 11 there was hail that did an immense amount of damage to the greenhouse plants and then, June 14, there was a second storm, which finished off a large part of the glass which had escaped breakage the first time.

Both of the accompanying illustrations are from photographs taken between June 11 and June 14, after the first storm and before the second one. The picture showing the unbroken roofs was made at the establishment of the Pikes Peak Floral Co., where the houses are covered by a wire screen, as shown in the picture, supported by an iron rail attached to the ridge pole, as may be seen in the picture. This plant escaped the first storm without the breakage of a single pane of glass. The other picture is from a photograph made at the old Clark plant, now also owned by the Pikes Peak Floral Co. The picture shows clearly what would have happened to the other range if it had not been for the screen protection.

The two storms broke probably 100,000 square feet of glass in Colorado Springs. Of this amount the Clark plant of the Pikes Peak Co. lost probably half. F. F. Crump lost only about one-fourth his glass, but Frank Hayden and John Smith were heavy losers. In addition to the breakage of glass, the hail cut up a large amount of bedding stock, much of it being rendered entirely useless just at the season when bedding out is beginning in the mountain district.

In the matter of the screen over the houses, the question will naturally arise if it might not be preferable to pay the cost of hail insurance and undergo the other losses incidental to hail storms, which are usually as seldom as they sometimes are severe, rather than to shut out light every day in the year. For Colorado Springs it may be said that the percentage of possible sunlight there is usually in favor of the florist; he gets a relatively large amount of light.

SEASONABLE SUGGESTIONS

Tuberous Begonias.

Where flowering plants in pots are required in summer, tuberous rooted begonias prove invaluable. They can be had in bloom over a long period by starting the tubers early or late, and as they are quite persistent flowering their value is greatly enhanced. Our earliest batch is now in flower in a cool house. A moderate shading is on the glass and ventilators are continuously open. It is necessary to use some supports for the thick, fleshy flowering stems, which would otherwise be liable to snap off. These stakes should be short and should not be visible when the plants are in flower.

For room decoration, for piazzas and window-boxes, where broken from direct sunshine, and bedding-out in shady spots, tuberous begonias are superb. The newest and most up-to-date strains have flowers of great substance and immense size, blooms six to seven inches across being quite common. It is unfortunate that, owing to our hot summers, their culture in the open air is uncertain, unless they have a fair amount of shade. This is especially true of the interior, although along the sea-coast they do well in the sun. Here, however, the night temperatures are lower and the air is more constantly laden with moisture, conditions just to the liking of these begonias.

Seedlings should be potted along as they need it. Use a light, rich compost, containing a fair proportion of sand. These will make nice plants for late summer blooming. If tubers only are wanted, plant the seedlings outdoors in partial shade, or better still, in a coldframe, using a cheesecloth covering during bright sunshine. The low price at which tubers of good quality are now offered makes it hardly worth while for small growers to raise seedlings.

Cinerarias.

Where cineraria plants are wanted in bloom at Christmas, or a little later, it is now time to sow a batch of seeds. Cinerarias do not germinate well during hot weather and the little seedlings are liable to damp off during hot, moist spells. Their growth is at best slow during the summer months; in common with many other plants, their real growing season starts with the cool nights of autumn. Sow the seeds in well drained pans of light, sandy soil. Cover the seed lightly and after watering cover with a sheet of glass, laying paper again over this. Place the pans in a cool, north house or coldframe facing north. Remove the glass and paper as soon as the seedlings germinate and always air freely. A close, stuffy atmosphere will speedily cause the seedlings to damp off.

Screen-covered Greenhouses That Passed Safely Through Heavy Hail.

Genistas.

Keep late winter rooted cuttings of genistas potted on. They should make nice stock in 5-inch or 6-inch pots before fall. Keep the shoots pinched to give the plants a thick, bushy habit, and plunge them in a bed of ashes in a cold-frame. Older plants, which have been, or should be, plunged outdoors some time ago, will be making plenty of growth now, and it will be necessary to go over them once in three or four weeks with a pair of shears and trim them into shape. It is, we often think, a pity that all genistas grown commercially are trimmed in such a topiary-like fashion. Plants naturally grown are much more beautiful, and it is a question whether it would not pay some growers to break away from the stereotyped style and let some plants run up a little. Of course, a little trimming is necessary in all cases, but the tendency is to overdo it.

Gladioli.

Gladioli now bloom over quite a long season. Flowers of the Colvillei type are on the markets in February and March, while the last of the Gandavensis type grown outdoors last until the end of October. Where the most desirable colors are grown, there is a fairly good demand for the spikes all through the summer months, and with asters and sweet peas they are the most important of outdoor flowers for marketing.

Late plantings indoors will continue to give some spikes for a while longer, but these are mostly now on the wane. As probably the benches in which they have been grown are wanted for other crops, the bulbs can be dug up and heeled in outdoors to ripen off. Some gladioli, notably the white varieties, make better bulbs under glass than outdoors, and it pays to carry them over a second season. Of course, it is necessary to carefully ripen the bulbs. If this is done they are excellent for forcing a second season. With America, Snow White and Shakespeare we have had better results with bulbs the second season than the first.

The earliest planted outdoor batch will soon be starting to push up their spikes. These and all succeeding batches are looking uncommonly well this season, thanks in a large measure to abundant moisture. The hoe or cultivator should be run through the rows after every shower. The more the surface soil is stirred, the faster the plants will grow. Any bulbs still unplanted should go in the ground without delay. Set a little deeper than in the case of spring planted bulbs. Last season we laid our bulbs in trenches, gave these a soaking with the hose, pulled the soil over the bulbs, and they came up quickly in an extremely hot and dry month. The late planted bulbs do not give as strong spikes as the earlier batches, but they work in usefully when outdoor flowers are on the wane and before indoor flowers are plentiful.

The present season has shown a decided partiality on the part of the public for two varieties, both peach pink in color, Gladiolus nanus Peach Blossom and America. The florist who stocks up heavily on these two varieties will not go far astray. They are each of a color which the general public is looking for.

Palms.

While we have had no intensely hot weather this summer, the longest day being reached without 90 degrees in the shade temperature being recorded, it is unlikely that torrid weather will be much longer delayed. Palms have not needed a heavy shading, thanks to the absence

Effect of the Hail on Unprotected Glass.

Geraniums

GERANIUMS FOR EASTER

When should geraniums be started so as to have nice, stocky 4-inch plants for Easter? When should the pinching back and disbudding be discontinued? I live in the state of Illinois. L. M. D.

The florist who stocks up heavily on these two varieties will not go far astray. They are each of a color which the general public is looking for.

Effect of the Hail on Unprotected Glass.

Palms.

While we have had no intensely hot weather this summer, the longest day being reached without 90 degrees in the shade temperature being recorded, it is unlikely that torrid weather will be much longer delayed. Palms have not needed a heavy shading, thanks to the absence

of extreme heat, but so soon as hot weather comes along they will quickly become pale and sometimes burn if the glass is not sufficiently shaded. Not only are the plants of a darker hue under shade, but the water supply is less of a problem. Scale and other insect pests will spread fast now if hosing is neglected; one thorough syringing a day, at least, should be given, but on hot days two or three wettings overhead will refresh the plants. The atmosphere should never feel dry at any time.

There is no time at this season of the year for any sponging or cleansing of the plants, but by judiciously using a spray from the hose, pests will be held in check and the foliage kept clean at the same time. Plants in pots or tubs which are matted with roots should be afforded liquid manure once in ten days. In fact, about all palms well established will be benefited by its use. There are several special plant foods of a chemical nature which are also excellent for keeping the foliage a dark green color.

Cold-storage Lilies.

Early in July is a suitable time to start some cold storage bulbs of Lilium longiflorum, speciosum and speciosum album for flowering from Thanksgiving to Christmas. The longiflorums, as a rule, will go in 5-inch pots; the speciosums do rather better in boxes containing six inches of soil, or if in pots succeed better in large sized ones, five to seven bulbs to a pot. After potting, all should be placed on the floor of a cellar or pit where the sun will not dry them out. One good watering should carry them until growth starts. Do not stand the pots in a coldframe or under the greenhouse bench. The temperature in each case is too high. If a frame is used, place some board shutters over the sashes to keep the bulbs cooler and prevent drying out. Overwatering should be guarded against. More lilies in the early stages of growth are ruined by too much moisture than all other causes combined, and not infrequently the diseased foliage charged to dealers' accounts is caused by an overplus of water in the beginning, which simply rots all the roots and causes a sourness of the soil which no plants will thrive in.

Primulas.

The proper place for primulas now is in coldframes, where they can have an abundance of air, which can be provided by elevating the sashes a few inches, there being now no need to close them at night. Shade must be provided either in the form of cheesecloth or lath blinds. The latter are preferable, being heavy and not blown away by every gust of wind.

Potting should be attended to, so that the plants will not get starved before receiving their final shift. Pots five and six inches in diameter are the usual commercial sizes used and the early sowings should be ready to go into these about the end of the present month. Use as a compost for all the primulas, including Sinensis, obconica, Kewensis and Forbesi, a compost comprising two parts fibrous loam, one part leaf-mold, one part rotted cow manure and sufficient sharp sand to keep the whole porous. Pot moderately firmly. On the afternoons of hot days a light spraying overhead refreshes the plants.

Jerusalem Cherry, a Big Christmas Seller.

The Review can supply any horticultural books at publishers' prices.

SOLANUM CAPSICASTRUM.

Of the various berried plants grown for Christmas, the one of easiest culture, which still sells well in many places, is the old Jerusalem cherry, Solanum Capsicastrum. It is true that it does not bring the price of Ardisia crenulata, but it takes three years to grow a salable plant of the latter and only nine months for the former. Where a berried plant to retail profitably at a comparatively low price is wanted, there is nothing to equal the Jerusalem cherry.

Propagation can be either by cuttings or seeds, the latter method being much the better one. Cuttings produce plants which berry and ripen earlier than seedlings, but they lack the size and symmetry characteristic of the latter. Seed sown about the end of February is in good season. There is no need to buy it. Select a few fine berries from an extra good plant. These will give you more seedlings than you can use. The seeds germinate quickly, and when of sufficient size can be potted off into 2½-inch pots. Place in a coldframe about the end of April and plant out not later than the middle of May. Allow a foot between the plants in the rows. No topping is needed, but the ground should be kept well stirred all summer.

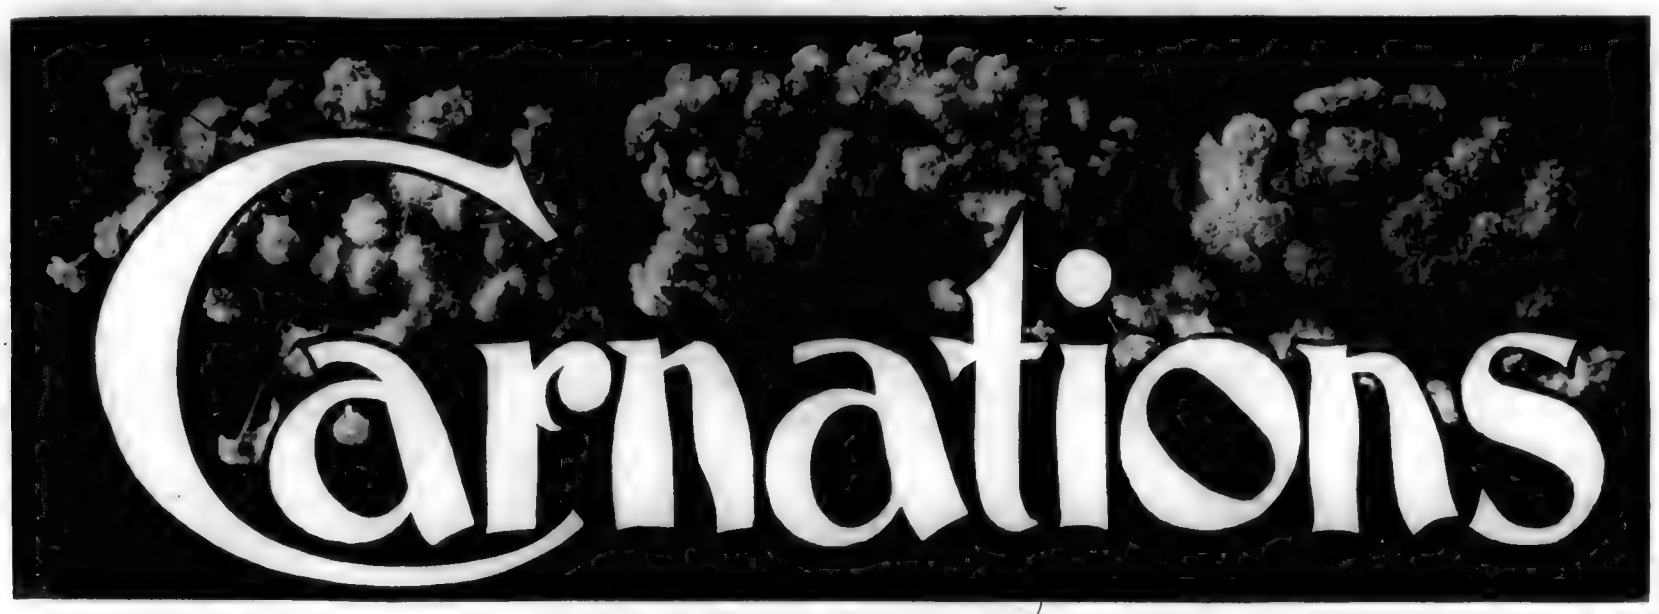
About the last of August the plants will be heavily fruited and they can be dug up and placed in 5-inch and 6-inch pots; extra heavy plants may need 7-inch. Shade for a few days; then stand in full sun. Syringe freely until the plants stop wilting. The plants can be kept in a cold pit until November, or, if space permits, may be placed in a cool greenhouse about the last of September. A few degrees of frost will not harm the plants in the least.

For either Thanksgiving or Christmas trade, Jerusalem cherries are still found excellent sellers by many country florists, although they do not sell at the higher class stores as well as ardisias, probably on account of their being too common.

C.

WOOD LICE AGAIN.

We are troubled with a little, brownish, scaly worm, about an inch long, resembling the "thousand leg" worm. It is just under the surface of the soil and under crocks. What is it and what can we do to get rid of it, also the wood lice?



M. & B.

The wood lice or sow bugs can be trapped in large numbers by laying halves of potatoes or turnips which are scooped out. The sow bugs will crawl into the excavated parts and can be destroyed by picking up the portions of roots and shaking the pests into hot water. Pots or small boxes of dry moss laid near their haunts will attract many and they can be similarly destroyed.

The other pest referred to can be controlled by using tobacco dust on the surface of the pots or benches. Put some under pots where the pests are troublesome. Keep the space below your benches clear of decaying wood and any other rubbish likely to attract insects. Whitewash any stonework, and when benches are empty give them a similar treatment. Cleanliness will do much towards reducing the numbers of these two pests.

C. W.

East Rochester, N. Y.—E. A. Corson has built another greenhouse near his conservatories on Autumn street.

CARNATION NOTES.—EAST.

Preparations for Housing.

The press of spring business being over, the benches which are to hold next season's blooming plants should receive attention. Every grower must be his own judge as to which varieties are to be thrown out first, but when the decision is made and the plants no longer yield profitable returns, they should be removed at once.

Under no circumstances must old stock be allowed to wither and dry in the house, as this only encourages increase of insect pests and fungous disease. If there is a desire to lighten labor in removing the soil, this can be left a few days to dry out.

As soon as empty, the benches should be thoroughly cleaned with broom and hose, applying water under strong pressure, after which a fumigation by burning sulphur will accomplish much in destroying insects and disease germs.

When well dried out, apply a generous coat of lime-sulphur wash, preferably hot. There need be no exact rule as to the proportions of sulphur employed. We use about a 6-inch potful to one-half barrel of the wash, but it should be added before the slaking lime has ceased to boil.

Any needed repairs should, of course, be made previous to whitewashing.

Filling With Soil.

Opinions, or at least methods, differ in the matter of placing an inch or so of manure in the bench before filling with soil. Our preference is for its use, but we do not consider it positively necessary, especially if the soil be of good strength. It is not imperative that the manure used for this purpose be well rotted. We have used the fresh article, with excellent results.

As fast as brought in, the soil should be leveled in the bench. Dumping in heaps to be spread at will, or running the harrow over fresh soil, will not result in even density of the mass.

If it is desired to obtain bloom early in the season, benches which are to hold stock for this purpose may with advantage receive a light sprinkling of bone meal, well raked in, but as a rule it is preferable to withhold it until the plants are well under way. This matter will be taken up at length in later notes.

It is advisable to fill at least a week previous to planting, thus allowing the soil to become settled and also permitting the harvesting of a crop of weeds, which, by the way, should be encouraged by occasional light watering and allowed to attain the height of two inches before pulling. This practice improves the soil's texture. GEO. S. OSBORN.

A BEGINNER IN CARNATIONS.

Would you please give me some light on carnation growing? I have two houses, one 24x108 and the other 14x90, both very light houses. I have been growing lettuce in the winter in both these houses, and in the spring geraniums and vegetable plants. A friend of mine has encouraged me to grow carnations in these two houses, claiming I can realize more money than from what I am growing, and I have prepared to put them in carnations. I have planted my young stock out in the field—Rose-pink Enchantress, Enchantress, White Lawson, Pink Lawson, Perfection and Lawson-Enchantress. I have about 3,000 plants in the field that are nice, but planted a little late. My beds are on the ground, except that in the 108-foot house the two side benches are up on boards near the glass. I have seven inches of soil in my beds, underlaid with seven inches of ashes for drainage. I have the houses piped to maintain a temperature of 50 to 55 degrees in severe weather.

On the soil I have in these houses I have grown two crops of lettuce and one crop of radishes, besides some tomato plants in the spring. It was a clay loam, in good condition when I put it in the houses. I have manured the ground for each crop and the soil is now very loose and rich. On account of my late start, I cannot remove all this soil, but I thought I would take part of it out, haul some clay loam in and mix it with the soil I have in the house. Is this all right for carnations? I want first-class flowers. About how many blooms will a plant produce in a season, putting them in the houses in August, planting them ten inches apart and twelve inches in the rows, tying them up and disbudding them? Would they be profitable at $2 per hundred? C. F. B.

There is no reason why your two houses should not grow first-class carnations if you give them proper culture. If you have a good market for the blooms you should be able to reap fair returns, but whether they will return you more money than your lettuce did, will depend on your success in growing, and on your market. If your vegetable market was an average one, you can hardly expect to make as much money at growing a crop with which you are not familiar as you did from a crop which you know all about. After a few seasons' experience, however, you may be able to do quite well.

With good, average culture, the varieties you name should produce about twenty blooms to the plant. Some growers cut more, others cut less. Much depends on the size of the plants when housed and how long the season will run with you.

You cannot afford to sell your blooms for $2 per hundred throughout the season, unless you can get that figure for your whole cut, and from October 1 until July 1. From November until May they are worth 3 cents and 4 cents each, if they are of good quality, and at Christmas and Easter they are worth at least 5 cents and 6 cents. So you can figure for yourself where you would land if you sold on a flat rate of 2 cents each. I may add that those flat-rate contracts seldom prove satisfactory. Either the grower has a kick to make, or else the retailer finds reason to complain. Sell your product at a fair price, according to the state of the cut flower market. Then, if you happen to have a good cut when flowers are scarce, you will reap good profits and no one can gainsay you your good fortune. And later, when flowers are plentiful, you can afford to sell at a lower figure and no one can complain about having to pay you more than the flowers could be bought for elsewhere, or that he was obliged to take more blooms from you than he could use.

If your friend will take your entire cut through the winter, and you reserve all your blooms for him during the season of shortage and charge him moderately for them at that time, you will naturally expect him to give you the preference in the spring, when flowers are to be had in plenty and at very low prices at times. If you do not run the price up to the top notch at holiday time, he should not try to force it down to the lowest notch in times of plenty. In fact, you must both be fair toward each other, and be guided by the general market conditions. You must always bear in mind that your customer must be able to buy flowers so that he can sell them at a fair profit, and he must not forget that unless he pays you enough for your blooms so there is a profit to you in your crop, you cannot afford to grow the blooms for him.

I would advise you to take out all the soil from your beds. There is more soil than you need in them, to begin with, and most likely it is now unfit to grow first-class carnations. Put in about four

inches of soil for your carnations and let it all be new. A. F. J. B.

EUROPEAN NOTES.

Established for nearly a century and held in good repute at home and abroad, the name of Hugh Low & Co. is non est, but the firm goes on as before, under the title of Stuart Low & Co., Bush Hill Park, England. Stuart Low and his brother, E. V. Low, have dissolved partnership; hence the new title. Stuart Low is well known throughout Europe as a progressive horticulturist. He has been on the jury of many of the leading international exhibitions and a few years ago he was president of the Horticultural Trades Association of Great Britain and Ireland. Orchids, palms, carnations and roses are special lines with the firm.

John Waterer & Sons, Ltd., Bagshot, are running their annual rhododendron show at the Royal Botanic Gardens, London. Nearly 200 varieties are on view, arranged in 10-foot-high banks of bloom, in masses of gorgeous colors, the centerpiece a great pile of Pink Pearl.

A movement is on foot to present Harry J. Veitch, V. M. H., of James Veitch & Sons, Ltd., London, with his portrait, painted by one of the leading artists. The sum of 600 guineas will be required and a considerable part of this has already been subscribed.

The Dutch bulb growers continue to give good accounts of the crops, particularly of hyacinths and tulips, and orders booked for the latter, especially market varieties, are up to the average. Narcissi promise well. Crocuses may turn out to be scarce, as there is a brisk demand.

Hubert & Co., the largest growers and exporters of narcissi in the Channel Islands, who turned their attention to narcissus growing in America a few years ago, are now prospecting with a view to growing tulips on their American farms. The manager, J. Guille, has been over here on a visit and, in company with F. J. Hubert, inspected large areas of the tulip cultures in Holland, with the purpose of purchasing bulbs to grow on for sale in America. Bee.

ROOF LADDERS.

I would like to inquire as to what are the usual methods of getting onto the roofs of greenhouses when repairing them. I have been using a 1x12 board sixteen feet long with cleats nailed crossways, but find it unhandy. My greenhouses have sashbars eighteen feet long. P. H.

Most growers use a contrivance similar to your own, except that a number of crosspieces are nailed on the under side, long enough to extend over the sashbars on each side; these hold the ladder away from the glass. The ladder should be long enough to reach over the ridge and should have a cleat on the under side at the end large enough to hook over the ridge and keep the ladder from slipping down. H. O.

CORRECT ADDRESS.

There is considerable mail coming to Arcade, Ill., addressed to Thomas J. Tenny. No doubt this address is intended for mine, as there is no one else living here whose name resembles Tenny. Let the trade know the mail lists are wrong. Thos. J. Denny.

.....BUSINESS AND OTHER NOTES.....

Kokomo, Ind.—W. W. Coles is at Oden, Mich., on his annual trip for recuperation after the busy season.

Leetonia, O.—Harry G. Wolfgang has had an exceptionally good trade this spring and has cleaned out everything salable in the line of bedding plants.

Eureka Springs, Ark.—Clayton I. Poor, formerly of Jonesville, Mich., is now located at this fine summer resort, and is building a range of glass and a store.

Elgin, Ill.—Fire in the barn of George Souster did $200 damage June 16. The local papers make much of the rescue of the horses by Mr. Souster's two daughters.

Waynesboro, Pa.—Henry Eichholz is doing a big business in bedding out. He has done a great deal of this work in the vicinity of Pen-Mar, where there is a colony of summer cottages.

Adams, Mass.—A. J. Boothman has begun work on his new iron-frame greenhouse, 18x75 feet, and will hurry operations as much as possible, as he is greatly in need of the additional space.

Bluefield, W. Va.—This city is to have a much-needed enterprise. Edward Schneider is here for the purpose of starting a greenhouse. It has not yet been decided where it will be located.

Fall River, Mass.—Paul de Nave is cutting a good crop of Cattleya Mossiæ, C. Gaskelliana and C. gigas Sanderiana. He has a house 25x100 full of orchids, containing chiefly cattleyas, dendrobiums and oncidiums.

Sandusky, O.—D. R. White, the Hancock street florist, has purchased the Central Greenhouses, which have been successfully conducted for a number of years by Miss Mary Mackey. Miss Mackey expects to leave before long for Los Angeles, where she will join Mr. and Mrs. Denver J. Mackey.

Waverly, Ia.—Mrs. P. A. Case, whose husband died in March, 1908, has since conducted the business with the aid of her daughter and son-in-law, H. B. Mathews. The firm is now Case & Mathews. Business has been excellent this spring and during the summer three houses now seventy feet long will be extended to 100 feet.

Fort Dodge, Ia.—E. E. Nordwall, of the North Floral Co., says that Decoration day, this year, was the heaviest this territory has ever known. This firm, being located on the road to the three cemeteries, was able to sell everything that was in bud and showed color, and in cut flowers it was impossible to get enough to meet the demand.

Princeton, Ind.—A. A. Smith, of W. J. Ritterskamp's, has sailed for his former home in Christiana, Norway, where he will spend several weeks with his mother and other relatives. He will also visit members of the trade in Holland, and will there purchase a shipment of bulbs for Mr. Ritterskamp. His trip will occupy about two months.

Hudson, Mass.—F. A. Morse has had a large sale of plants and flowers from the French Greenhouses, South Sudbury, this spring.

Bristol, Conn.—Terry & Peck recently completed their annual job of putting the park north of the local passenger station into condition for the summer.

Des Moines, Ia.—The Lozier Floral Co. will occupy a new, modern building at 410 East Sixth street, next door to its present location, as soon as the new structure can be erected.

Fall River, Mass.—William Byard, who has been confined to his home by illness for several weeks, was at last report in so serious a condition that little hope was entertained of his recovery.

Malden, Mass.—E. D. Kaulback & Son furnished the decorations for the Merrill-Brackenbush wedding. The color scheme of pink and green was carried out with ferns, potted plants and roses.

Wheeling, W. Va.—At the Vance-Mendel wedding the house was elaborately decorated by Max L. Hess. The color scheme of pink and white was said to be artistically carried out in every detail.

Denver, Colo.—Some handsome floral pieces were sent by various labor organizations to the funeral of Max Morris, the labor leader. The designs were executed by Mrs. L. A. Dunsmore, the north side florist.

Northampton, Mass.—Alexander Parks had the contract this season for planting the beds in the Main street park, and the plan which he has followed in the work is said to be particularly pleasing and artistic.

Andover, O.—Mrs. R. A. Pardee has sold her greenhouses to Grant Chase and expects to leave about August 1 for the Isle of Pines. She will be accompanied by her son, Max, and daughter, Claire. Mr. Pardee has been located in the Isle of Pines for several months, and is so well pleased with the country that they expect to make it their future home.

Wayne Junction, Pa.—The florists of the Philadelphia & Reading railway have about completed their annual work of distributing flowers and shrubbery to the various stations. During the last few years the Philadelphia & Reading has been putting out over 200,000 plants of various kinds, all of which have been grown at the company's own greenhouses at this place. Nearly 200 stations are supplied annually.

Lewiston, Me.—Ernest Saunders is making extensive and substantial improvements at his greenhouses, on Main street. The new building, the framework of which is now up, will be 600 feet long. The old house and the office are coming down and new ones and gardens will take their place. The new office will be a model affair of its kind and will be located a little to the north of the present one. The improvements include, also, a new boiler-house, 36x40 feet, with a smokestack 100 feet high.

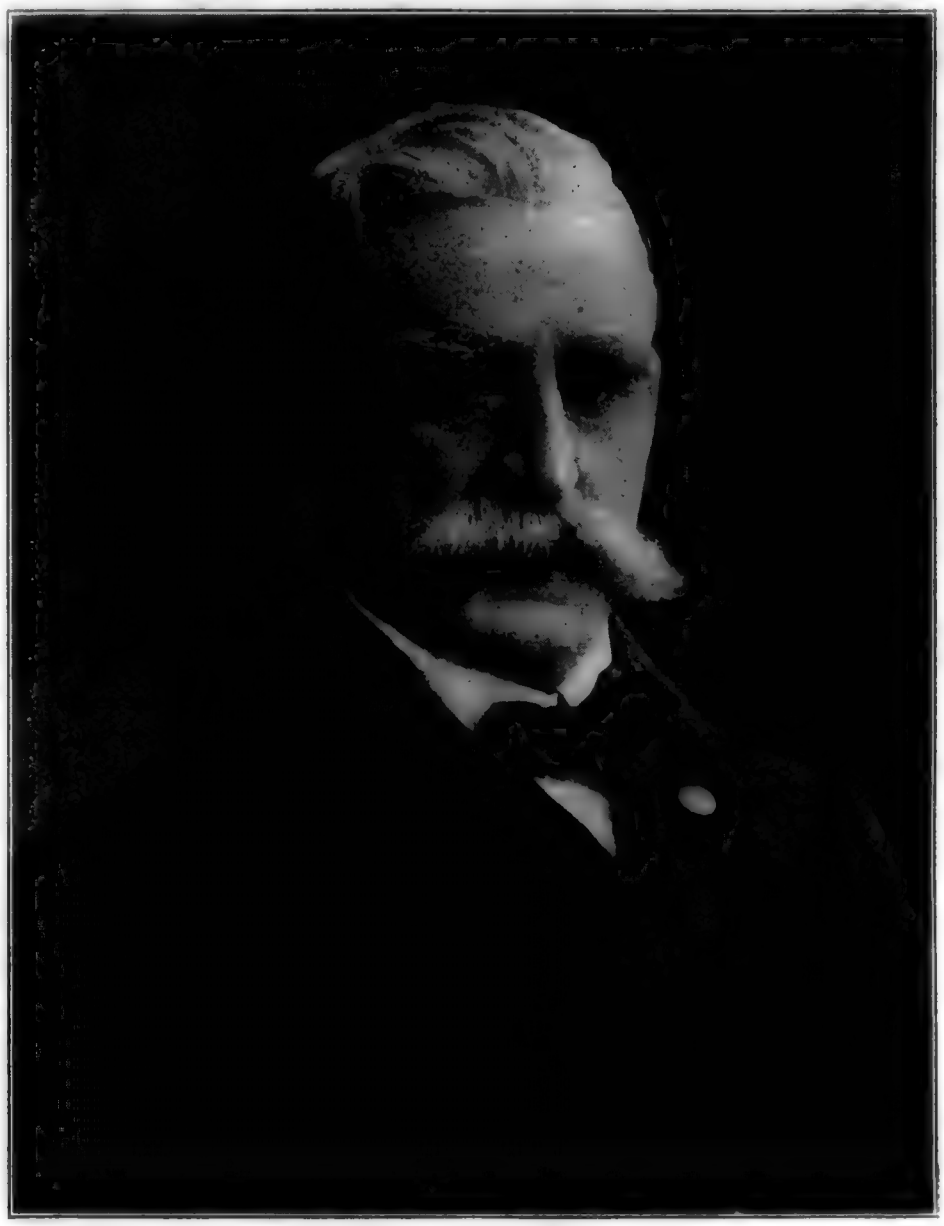
OBITUARY.

Abram V. Jackson.

Abram V. Jackson, at one time one of the largest rose growers for the Chicago market and at the time of his death the oldest native-born citizen, passed away last week and was laid at rest in Rosehill June 18.

Ten years ago, and for a considerable period before that, Mr. Jackson was widely known in the trade, being one of the principal consignors of the Kennicott Bros. Co. and one of the most successful of local pioneer growers. Bride and Maid were his specialties.

Abram V. Jackson was born July 7, 1834, and two years ago received the gold medal at the Old Settlers' picnic as the oldest person then living who was born in the city. Speaking of him recently, his sister, Lydia Abigail Gear, 84 years old, said:



"Our father, Samuel T. Jackson, was sent from Washington by the Government to open the Chicago harbor. Abram was born in a government building opposite Fort Dearborn, on the north side of the Chicago river. At that time the Chicago river had no docks or bridges, and had sloping, grass-grown banks down to the water. The mouth of the river at that time, instead of flowing straight into the lake, made a turn to the south and emptied into the lake about where Van Buren street is at present.

"The first work done on the harbor by S. T. Jackson was to open a straight channel through to the lake, making the entrance much the same as it is at the present time. Surrounding the fort and government buildings were thousands of tents occupied by Indians, many of whom had congregated to receive their portion of the money paid them by the government for the present site of Chicago.

"Abram V. Jackson grew up with the city, being the first, and until his death the oldest citizen born in Chicago. He was fond of telling stories of swimming in the Chicago river during the summer and skating on it in the winter. He had an opportunity of seeing Chicago grow practically out of a wilderness to a city, from the old Fort Dearborn and the few government buildings which surrounded it, to the second largest city in America. Where State street now is, with its magnificent buildings, during his youth was nothing but a mud-hole, which could hardly be traveled, with signs stuck up in the center: 'No bottom here.' Homes were built on State street much like those now seen in country towns, with yards surrounded with picket fences. At that time a great deal of what is now the south side would flood over at times. Owing to the lay of the land, the north side was considered by far the best property because it was so much higher than the south side. Later, Abram V. Jackson, as he became older, was elected captain of the Volunteer Fire Department, the first fire protection Chicago had.

"Abram V. Jackson accumulated considerable property in Chicago and owned a number of buildings, but at the time of the great Chicago fire, like many others, he lost all his holdings. He then went to the north side, where he purchased property at 3267 North Western avenue, and took up the business of growing cut flowers. After a few years in this business he decided to take up mushrooms, and these gradually displaced flowers. In the last dozen years, with his son, Archie V., he built up what is said to be the largest mushroom and mushroom spawn business in this country. Mr. Jackson retired from active participation in the trade in 1906." Death came peacefully June 15.

Mr. Jackson is survived by his widow, one son and one daughter, Mrs. John Hatch. The funeral was largely attended, for practically every resident of the Bowmanville district knew him and liked him. There were many flowers.

Abram V. Jackson.

Eugene W. Stark.

Eugene W. Stark, of Stark Bros. Nursery and Orchard Co., Louisiana, Mo., one of the leading citizens of Pike county, died unexpectedly of heart disease June 15 at the Jewish Hospital, St. Louis, following an operation for the removal of gall stones.

Mr. Stark had apparently recovered from the shock of the operation and was believed to be in a condition favorable to early recovery. He awoke a few minutes before 4 o'clock and asked his nurse for a drink of water. As she turned, he raised himself in bed to a sitting posture. The effort proved too great an exertion and he expired from heart seizure in a few minutes.

Eugene W. Stark was born in Pike county, Mo., August 8, 1865. He was a son of Thomas Stark, and grew up on his father's farm. He received his early education in the schools of Louisiana and attended college at La Grange, Mo. He married Miss Ann Withrow, daughter of Thomas and Abrah Withrow, of Troy, Mo. At an early age he acquired an interest in the Stark Nursery and Orchard Co., of Louisiana, Mo., a $1,000,000 corporation, one of the largest of its kind.

He was elected judge of the County Court of Pike county at the age of 27. In 1908 he was elected to the State Senate from the district which includes Pike, Lincoln and Audrain counties. Senator Stark was known as a hard worker in the Legislature and served on several important committees. He was the author of the new state primary law.

He is survived by a widow and three sons, 18, 16 and 10 years old, and by his mother and two brothers.

The funeral was held June 17 and was the largest ever held in the county, for Senator Stark was called the most popular citizen of the district. He was secretary of the Stark Bros. Nursery and Orchard Co. and held one-tenth of its million-dollar capital stock.

W. H. De Camp.

Walter H. De Camp, for many years in the nursery business in Cincinnati, O., died at his home in that city June 10, after an illness of several months. He is survived by his wife.

POINT MARION, PA.—Mrs. Fannie Kussart is building two greenhouses, one 23x43 and the other 17x43, in addition to the two small houses she already owns. She also has a new store on Main street and her business is increasing steadily. The town, she says, is growing fast and now contains six factories. A bridge which has just been built across the Cheat river will also be helpful to the town.

inches of soil for your carnations and let it all be new. A. F. J. B.

EUROPEAN NOTES.

Established for nearly a century and held in good repute at home and abroad, the name of Hugh Low & Co. is non est, but the firm goes on as before, under the title of Stuart Low & Co., Bush Hill Park, England. Stuart Low and his brother, E. V. Low, have dissolved partnership; hence the new title. Stuart Low is well known throughout Europe as a progressive horticulturist. He has been on the jury of many of the leading international exhibitions and a few years ago he was president of the Horticultural Trades Association of Great Britain and Ireland. Orchids, palms, carnations and roses are special lines with the firm.

John Waterer & Sons, Ltd., Bagshot, are running their annual rhododendron show at the Royal Botanic Gardens, London. Nearly 200 varieties are on view, arranged in 10-foot-high banks of bloom, in masses of gorgeous colors, the centerpiece a great pile of Pink Pearl.

A movement is on foot to present Harry J. Veitch, V. M. H., of James Veitch & Sons, Ltd., London, with his portrait, painted by one of the leading artists. The sum of 600 guineas will be required and a considerable part of this has already been subscribed.

ROOF LADDERS.

I would like to inquire as to what are the usual methods of getting onto the roofs of greenhouses when repairing them. I have been using a 1x12 board sixteen feet long with cleats nailed crossways, but find it unhandy. My greenhouses have sashbars eighteen feet long. P. H.

Most growers use a contrivance similar to your own, except that a number of crosspieces are nailed on the under side, long enough to extend over the sashbars on each side; these hold the ladder away from the glass. The ladder should be long enough to reach over the ridge and should have a cleat on the under side at the end large enough to hook over the ridge and keep the ladder from slipping down. H. O.

CORRECT ADDRESS.

There is considerable mail coming to Arcade, Ill., addressed to Thomas J. Tenny. No doubt this address is intended for mine, as there is no one else living here whose name resembles Tenny. Let the trade know the mail lists are wrong. Thos. J. Denny.

.....BUSINESS AND OTHER NOTES.....

Kokomo, Ind.—W. W. Coles is at Oden, Mich., on his annual trip for recuperation after the busy season.

Leetonia, O.—Harry G. Wolfgang has had an exceptionally good trade this spring and has cleaned out everything salable in the line of bedding plants.

Eureka Springs, Ark.—Clayton I. Poor, formerly of Jonesville, Mich., is now located at this fine summer resort, and is building a range of glass and a store.

Elgin, Ill.—Fire in the barn of George Souster did $200 damage June 16. The local papers make much of the rescue of the horses by Mr. Souster's two daughters.

Waynesboro, Pa.—Henry Eichholz is doing a big business in bedding out. He has done a great deal of this work in the vicinity of Pen-Mar, where there is a colony of summer cottages.

Adams, Mass.—A. J. Boothman has begun work on his new iron-frame greenhouse, 18x75 feet, and will hurry operations as much as possible, as he is greatly in need of the additional space.

Bluefield, W. Va.—This city is to have a much-needed enterprise. Edward Schneider is here for the purpose of starting a greenhouse. It has not yet been decided where it will be located.

Fall River, Mass.—Paul de Nave is cutting a good crop of Cattleya Mossiæ, C. Gaskelliana and C. gigas Sanderiana. He has a house 25x100 full of orchids, containing chiefly cattleyas, dendrobiums and oncidiums.

Sandusky, O.—D. R. White, the Hancock street florist, has purchased the Central Greenhouses, which have been successfully conducted for a number of years by Miss Mary Mackey. Miss Mackey expects to leave before long for Los Angeles, where she will join Mr. and Mrs. Denver J. Mackey.

Waverly, Ia.—Mrs. P. A. Case, whose husband died in March, 1908, has since conducted the business with the aid of her daughter and son-in-law, H. B. Mathews. The firm is now Case & Mathews. Business has been excellent this spring and during the summer three houses now seventy feet long will be extended to 100 feet.

Fort Dodge, Ia.—E. E. Nordwall, of the North Floral Co., says that Decoration day, this year, was the heaviest this territory has ever known. This firm, being located on the road to the three cemeteries, was able to sell everything that was in bud and showed color, and in cut flowers it was impossible to get enough to meet the demand.

Princeton, Ind.—A. A. Smith, of W. J. Ritterskamp's, has sailed for his former home in Christiana, Norway, where he will spend several weeks with his mother and other relatives. He will also visit members of the trade in Holland, and will there purchase a shipment of bulbs for Mr. Ritterskamp. His trip will occupy about two months.

Hudson, Mass.—F. A. Morse has had a large sale of plants and flowers from the French Greenhouses, South Sudbury, this spring.

Bristol, Conn.—Terry & Peck recently completed their annual job of putting the park north of the local passenger station into condition for the summer.

Des Moines, Ia.—The Lozier Floral Co. will occupy a new, modern building at 410 East Sixth street, next door to its present location, as soon as the new structure can be erected.

Fall River, Mass.—William Byard, who has been confined to his home by illness for several weeks, was at last report in so serious a condition that little hope was entertained of his recovery.

Malden, Mass.—E. D. Kaulback & Son furnished the decorations for the Merrill-Brackenbush wedding. The color scheme of pink and green was carried out with ferns, potted plants and roses.

Wheeling, W. Va.—At the Vance-Mendel wedding the house was elaborately decorated by Max L. Hess. The color scheme of pink and white was said to be artistically carried out in every detail.

Denver, Colo.—Some handsome floral pieces were sent by various labor organizations to the funeral of Max Morris, the labor leader. The designs were executed by Mrs. L. A. Dunsmore, the north side florist.

Northampton, Mass.—Alexander Parks had the contract this season for planting the beds in the Main street park, and the plan which he has followed in the work is said to be particularly pleasing and artistic.

Andover, O.—Mrs. R. A. Pardee has sold her greenhouses to Grant Chase and expects to leave about August 1 for the Isle of Pines. She will be accompanied by her son, Max, and daughter, Claire. Mr. Pardee has been located in the Isle of Pines for several months, and is so well pleased with the country that they expect to make it their future home.

Wayne Junction, Pa.—The florists of the Philadelphia & Reading railway have about completed their annual work of distributing flowers and shrubbery to the various stations. During the last few years the Philadelphia & Reading has been putting out over 200,000 plants of various kinds, all of which have been grown at the company's own greenhouses at this place. Nearly 200 stations are supplied annually.

Lewiston, Me. Ernest Saunders is making extensive and substantial improvements at his greenhouses, on Main street. The new building, the framework of which is now up, will be 600 feet long. The old house and the office are coming down and new ones and gardens will take their place. The new office will be a model affair of its kind and will be located a little to the north of the present one. The improvements include, also, a new boiler-house, 36x40 feet, with a smokestack 100 feet high.

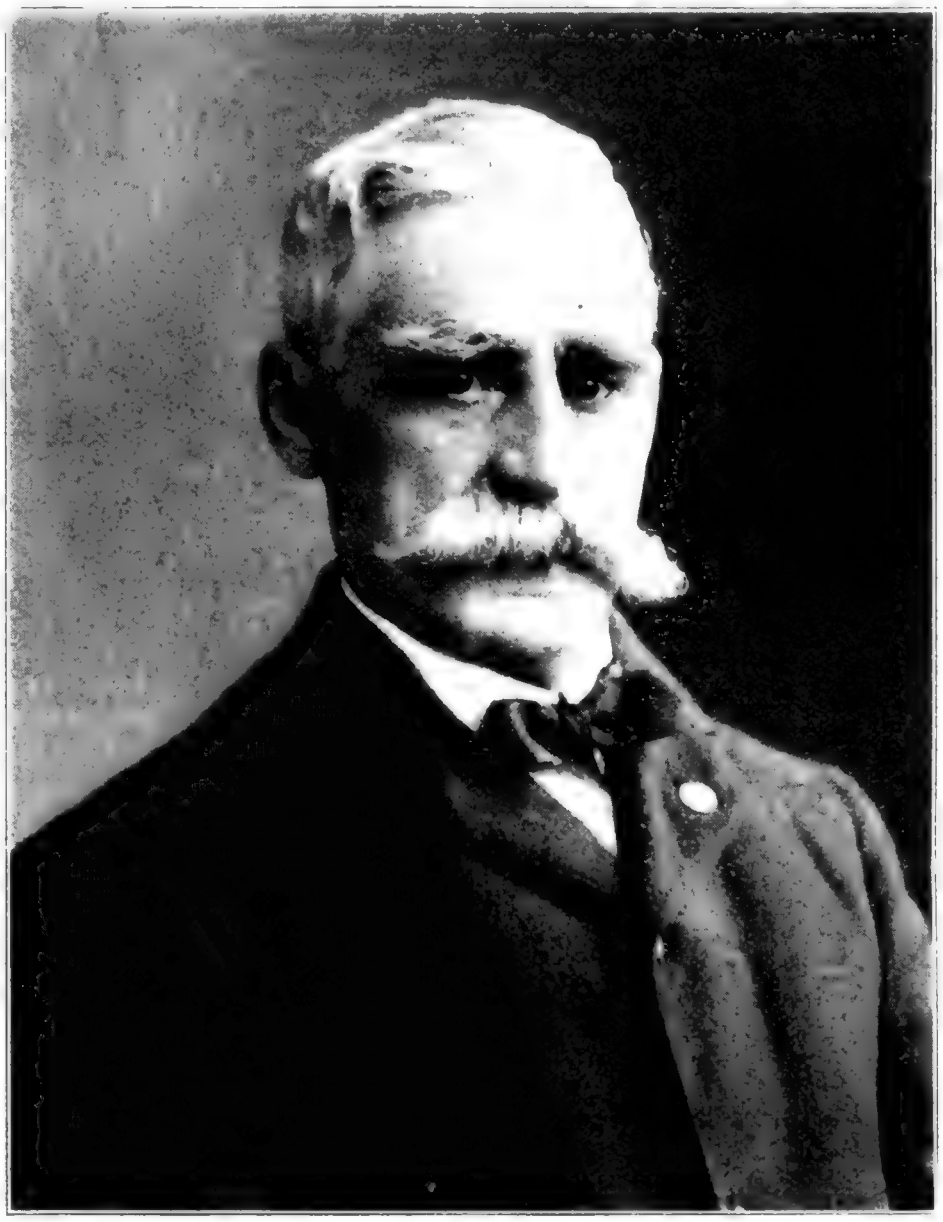
OBITUARY.

Abram V. Jackson.

Abram V. Jackson, at one time one of the largest rose growers for the Chicago market and at the time of his death the oldest native-born citizen, passed away last week and was laid at rest in Rosehill June 18.

Ten years ago, and for a considerable period before that, Mr. Jackson was widely known in the trade, being one of the principal consignors of the Kennicott Bros. Co. and one of the most successful of local pioneer growers. Bride and Maid were his specialties.

Abram V. Jackson was born July 7, 1834, and two years ago received the gold medal at the Old Settlers' picnic as the oldest person then living who was born in the city. Speaking of him recently, his sister, Lydia Abigail Gear, 84 years old, said:



"Our father, Samuel T. Jackson, was sent from Washington by the Government to open the Chicago harbor. Abram was born in a government building opposite Fort Dearborn, on the north side of the Chicago river. At that time the Chicago river had no docks or bridges, and had sloping, grass-grown banks down to the water. The mouth of the river at that time, instead of flowing straight into the lake, made a turn to the south and emptied into the lake about where Van Buren street is at present.

"The first work done on the harbor by S. T. Jackson was to open a straight channel through to the lake, making the entrance much the same as it is at the present time. Surrounding the fort and government buildings were thousands of tents occupied by Indians, many of whom had congregated to receive their portion of the money paid them by the government for the present site of Chicago.

"Abram V. Jackson grew up with the city, being the first, and until his death the oldest citizen born in Chicago. He was fond of telling stories of swimming in the Chicago river during the summer and skating on it in the winter. He had an opportunity of seeing Chicago grow practically out of a wilderness to a city, from the old Fort Dearborn and the few government buildings which surrounded it, to the second largest city in America. Where State street now is, with its magnificent buildings, during his youth was nothing but a mud-hole, which could hardly be traveled, with signs stuck up in the center: 'No bottom here.' Homes were built on State street much like those now seen in country towns, with yards surrounded with picket fences. At that time a great deal of what is now the south side would flood over at times. Owing to the lay of the land, the north side was considered by far the best property because it was so much higher than the south side. Later, Abram V. Jackson, as he became older, was elected captain of the Volunteer Fire Department, the first fire protection Chicago had.

"Abram V. Jackson accumulated considerable property in Chicago and owned a number of buildings, but at the time of the great Chicago fire, like many others, he lost all his holdings. He then went to the north side, where he purchased property at 3267 North Western avenue, and took up the business of growing cut flowers. After a few years in this business he decided to take up mushrooms, and these gradually displaced flowers. In the last dozen years, with his son, Archie V., he built up what is said to be the largest mushroom and mushroom spawn business in this country. Mr. Jackson retired from active participation in the trade in 1906." Death came peacefully June 15.

Mr. Jackson is survived by his widow, one son and one daughter, Mrs. John Hatch. The funeral was largely attended, for practically every resident of the Bowmanville district knew him and liked him. There were many flowers.

Abram V. Jackson.

Eugene W. Stark.

Eugene W. Stark, of Stark Bros. Nursery and Orchard Co., Louisiana, Mo., one of the leading citizens of Pike county, died unexpectedly of heart disease June 15 at the Jewish Hospital, St. Louis, following an operation for the removal of gall stones.

Mr. Stark had apparently recovered from the shock of the operation and was believed to be in a condition favorable to early recovery. He awoke a few minutes before 4 o'clock and asked his nurse for a drink of water. As she turned, he raised himself in bed to a sitting posture. The effort proved too great an exertion and he expired from heart seizure in a few minutes.

Eugene W. Stark was born in Pike county, Mo., August 8, 1865. He was a son of Thomas Stark, and grew up on his father's farm. He received his early education in the schools of Louisiana and attended college at La Grange, Mo. He married Miss Ann Withrow, daughter of Thomas and Abrah Withrow, of Troy, Mo. At an early age he acquired an interest in the Stark Nursery and Orchard Co., of Louisiana, Mo., a $1,000,000 corporation, one of the largest of its kind.

He was elected judge of the County Court of Pike county at the age of 27. In 1908 he was elected to the State Senate from the district which includes Pike, Lincoln and Audrain counties. Senator Stark was known as a hard worker in the Legislature and served on several important committees. He was the author of the new state primary law.

He is survived by a widow and three sons, 18, 16 and 10 years old, and by his mother and two brothers.

The funeral was held June 17 and was the largest ever held in the county, for Senator Stark was called the most popular citizen of the district. He was secretary of the Stark Bros. Nursery and Orchard Co. and held one tenth of its million-dollar capital stock.

W. H. De Camp.

Walter H. De Camp, for many years in the nursery business in Cincinnati, O., died at his home in that city June 10, after an illness of several months. He is survived by his wife.

POINT MARION, PA.—Mrs. Fannie Kussart is building two greenhouses, one 23x43 and the other 17x43, in addition to the two small houses she already owns. She also has a new store on Main street and her business is increasing steadily. The town, she says, is growing fast and now contains six factories. A bridge which has just been built across the Cheat river will also be helpful to the town.

RESULTS.
We give them. You get them.
We both have them.

WHEN people become well-to-do, flowers become a necessity to them.

How about the collections; are you looking after them this month? July and August are the vacation months, when money is likely to come in slowly.

GEORGE SYKES, manager of the Chicago office of the Lord & Burnham Co., asserts that experience has proven that the smaller the wood members of a greenhouse are, the longer they will remain sound.

BOSTON ferns are even scarcer this spring than usually is the case. For years it has been the regular experience that the autumn saw an overstock of Bostons, but by spring everything was cleaned up and good Bostons again were in strong demand.

THE United States Senate has amended the paragraph providing for duty on window glass in such a manner as to reduce the tariff on sizes not exceeding 16x24 one-eighth of a cent a pound when the value of the glass is less than 1¾ cents per pound. If the value of the glass exceeds 1¾ cents per pound, the duty is as before, namely 1⅞ cents per pound.

BUSINESS GOOD.

There can be no question about general business being good in the central district that looks to Chicago as headquarters for supplies, not only in general merchandise but in cut flowers and all trade needs.

Last week the bank clearings at Chicago, the best index to the state of general business conditions, exceeded those of the same week in 1908 by 24.8 per cent.

When other people are handling a fourth more money than a year ago, the florists will unquestionably get their share of the increase.

PARCELS-POST IMPORTATIONS.

Parcels-post packages from Australia, Austria, Belgium, Germany, Great Britain, Hongkong, Italy, Japan, the Netherlands, and Norway must not exceed $80 in value nor eleven pounds in weight.

Formal customs entry will be required for parcels-post packages where the value of the packages exceeds $100. Such entries will thereupon be subject to the customs laws and regulations concerning regular importations.

Parcels-post packages containing merchandise which have been regularly entered by addressee or his agent will be forwarded by the postal authorities to destination by mail, accompanied by the entries, the customs charges to be collected by the postmaster at the postoffice of destination and remitted to the customs officer where the entries were made.

AMERICAN ROSE SOCIETY.

Several persons have advised that the last schedule of premiums be adhered to by the American Rose Society for the next rose exhibition, to be held in New York city in March, 1910. President Poehlmann has requested the committee which drew the last schedule to act, and if in their judgment it seems best, that the same be adopted and published without delay. The committee is composed of Robert Simpson, Alex. Montgomery, John N. May, Frank R. Pierson and Benjamin Hammond.

Life certificates have been issued to Mrs. Gertrude M. Hubbard, who by unanimous vote at the Buffalo meeting was elected the first honorary life member, and to Peter Crowe, of Utica.

Treasurer Harry O. May reports that with all bills paid he has a net cash balance on hand.

There is one thing which surely should be done if the American Rose Society is to grow among amateurs, and that is to issue a special quarterly, something whereby the interest in the association would be aroused in those who do not see our excellent trade papers. Two propositions have been submitted—one from the "Gardeners' Chronicle," the other from the "Garden Magazine." A general meeting of the Rose Society will be called during the session of the S. A. F. in Cincinnati.

His Honor the Mayor of Detroit, Philip Breitmeyer, offers a cash prize of $100 for the best collection of hardy outdoor roses, in pots or tubs, to be exhibited at the next annual exhibition. The gentlemen who promised contributions last November toward the prize fund of the society have loyally redeemed their promises then made.

BENJAMIN HAMMOND, Sec'y.

CHICAGO.

The Great Central Market.

Changes in the market during the last week have been for worse and not for better. There has been a slight reduction in the supplies of carnations, but there has been a large decrease in the demand for them, so that conditions have not been improved. On the other hand, there has been a great increase in the receipts of roses, due to warm weather. The result has been disastrous, but the hope is the heat will quickly finish off the stock from last winter and put the market where the stock grown specially for summer will have some value.

The market for Beauty roses began to weaken the moment the leading commencements were over. The private schools, where the good flowers are used, close early. It is mainly the public institutions that do not close until the last week in June. There has been a big increase in the supply of good Beauties, the new stock of practically all growers being fine, while several are cutting excellent Beauties from old plants.

Rose growers did fairly well up to June 21, when a heat wave brought in immense quantities of poor stock. Killarney and Kaiserin are the two best varieties. Occasionally some Maids of good color are seen, but these and Bride are at the end of their season. The best roses are now slow sale, with practically no demand for the culls, a large part of which find an outlet through devious channels, on the curb, at amusement resorts, etc.

Quite a few growers are already throwing out carnations and benching for indoor culture, but supplies still are greater than the market requirements and prices continue low. The quality of carnations is excellent for the end of June.

Cool weather held back the peonies, and then extreme heat reached them. Even with low temperatures, last week saw receipts far beyond the capacity of the market and large quantities went into cold storage. It is figured that by the end of the present week there will be

THE THREE LEADERS

In this market today are OUR

Peonies, Beauties, Kaiserins

The Peony, when everything is right, is a reliable flower for shipping. But not all growers put up stock that will ship with satisfaction. We are headquarters for the Peonies of the oldest and most experienced grower—one whose stock always ships well.

Beauties

Flowers cut from old plants can't compare with our stock cut from plants grown cold all winter on purpose to give a big summer crop. Splendid buds, fine foliage, heavy stems, all lengths. Enough so no buyer need go without really good Beauties.

Kaiserins

When a good white rose is wanted there is nothing will take the place of **OUR** Kaiserin. Far better than the best Bride—and our cut is large; it will continue all summer—don't forget.

KILLARNEY is fine—the best pink rose.

Sweet Peas

We lead the West on Peas. Can supply any quantity—far the largest and finest lot on this market. Fancy stock in all the leading colors.

For all orders on file at 12 o'clock for evening shipment, we pick the stock specially each afternoon.

Green Goods

Plenty Smilax, fine strings. Asparagus strings are scarce, but Asparagus in bunches is in large supply with us. New crop fancy Ferns, the best Berkshire stock.

Mention The Review when you write.

more peonies in the freezer than ever before at one time. Some of the stock put away is in such condition that its salability at any later date is open to question. There probably now are 200 growers of peonies for this market, where six or eight years ago there were only half a dozen. By far the larger part of the receipts have been of the open character. Some of the flowers were exceedingly fine, but the necessity for immediate sale held the market low. Prices have ranged from 25 cents to 35 cents for good stock, with plenty to be had at 10 cents and 15 cents per bunch, and some for which no offer could be obtained. The best grades of shipping peonies have, of course, commanded more money, from 50 cents to 60 cents, and occasionally a little higher on special stock. When the mercury climbed June 20, the crop was quickly finished off. Any further receipts will come from the north.

The indoor sweet peas are approaching the end of their season. The quality is not what it was and the quantity is not so great as a few weeks ago. The sweet pea has sold rather better than any other flower in the market all through June, and is still doing well. With sweet peas, valley has been in demand for wedding work, but the supply has been too large.

Gladioli and Easter lilies have been selling cheaply. A few asters are in the market, but are not yet wanted. Water lilies are abundant and cheap. All the miscellaneous flowers move slowly.

The passing of the bulk of the June weddings has caused a slackening in the demand for strings of asparagus and smilax. Ferns are now abundant everywhere.

Smyth Meets with Accident.

W. J. Smyth sustained a fracture of the left leg just above the knee in a peculiar automobile accident at his summer residence at Lake Marie, near Antioch, Ill., June 20. He was cranking his machine when it dashed forward, pinning him against the wall of the barn. He was standing with his right leg inside the fender and the left leg outside. Mr. Smyth was brought to Chicago as soon as possible and is now in St. Luke's hospital. His injury was an extremely painful one, but the physicians, after an X-ray examination, said the only danger of permanent injury lay in a possible stiffness of the joint.

The daily papers printed grossly exaggerated and wholly inaccurate accounts of the accident.

Space for Wholesalers.

For several years it has been a matter of much difficulty to find desirable space in the district at the corner of Wabash avenue and Randolph street, where the wholesale cut flower houses are centered; there have been some large floors on Randolph street, east of Randall's, but little or nothing to be had elsewhere. The remodeling of the building at 52 and 54 Wabash avenue created one more fine room for wholesale cut flower purposes, which was quickly taken by Vaughan & Sperry, while others were "considering." This leaves vacant the Vaughan & Sperry quarters in the Flower Growers' Market and there also now is vacant a large room on the second floor of the Atlas building, above the Winterson Seed Store and next door to Zech & Mann. This space has formerly been occupied by a chocolate concern, which moved out in May. If divided, the room would be enough for two large wholesale concerns, or three of moderate size. When it was apparent this space would be vacant the McCormick estate offered it to several of the wholesalers not now in the Atlas block. The rental asked was $3,000 per year. Kennicott Bros. Co. is reported to have offered $2,700, which was refused. It is possible than an even lower offer if made now might be considered, because the renting season is over. John Zech says he hopes a wholesale florist will take the room, as it will help draw trade down to that end of the hall. The McCormick estate would like to gather all the wholesalers into its building and has indicated a willingness to consider any proposition wholesalers may have to offer that contemplates using the upper floors of a building for wholesale flower purposes.

Various Notes.

The marriage of Miss Ethelyn M. Austin and Benjamin E. Gage was celebrated at high noon Saturday, June 19. The wedding was a quiet one, only members of the two families being present. The Rev. Julian M. Sturtevant performed the ceremony. The bridal couple will take an automobile trip through the east and will be at home to their friends after September 1 at 1209 Michigan avenue, Evanston. Miss Austin is soprano soloist in the Second Presbyterian church of Evanston. Mr. Gage has charge of the landscape department of Peterson Nursery.

A married sister of Walter Tonner and the Misses Tonner is dead at her home

in California, where Miss Olga Tonner went recently to assist during her illness.

The Ogden Floral Co. has sued C. W. Murphy, owner of the Cubs, to collect a bill said to be due for planting trees at the west side ball park.

Wietor Bros. began cutting Golden Glow chrysanthemums last week and found them readily salable at $1 per dozen.

L. Coatsworth is now able to be downtown occasionally. He has lost weight during his illness and is not yet wholly free from rheumatism.

Leonard Kill accompanied the Cubs and their friends to Crown Point, June 18, to witness the automobile races.

G. Swenson, of Elmhurst, has been sending in some of the finest peonies received in this market.

It is said that Peter Reinberg's cut June 21 was the heaviest of the season. The morning shipment to the store was one wagon-load and the afternoon shipment two wagon-loads. New Beauties are now being cut.

The E. Wienhoeber Co. reports an excellent June business, with a number of large wedding decorations.

John Poehlmann, president of the Poehlmann Bros. Co., says there is no complaint of the way shipping trade is holding up.

Fred Weber is cutting heavily on his regular summer crop of Beauties, and E. C. Amling says they are selling excellently, considering the general condition of the market.

J. A. Eckert is a recent recruit at Randall's. He is calling on the city trade, but will go on the road as soon as fall business opens.

The Batavia Greenhouse Co. last week consigned between 5,000 and 6,000 dozens of peonies to the Chicago Rose Co. The firm has nearly three acres of peonies at Batavia.

C. W. McKellar last week invested in an Oldsmobile touring car and gave it a try-out in going to Crown Point, June 18, to see the automobile race.

A. Lange, with his wife and their son, will leave July 10 for a six weeks' trip to the Alaska-Yukon-Pacific Exposition, after which they will go south along the Pacific coast, spending a week in San Francisco, another in Los Angeles and returning by way of Salt Lake City, Denver and Omaha, where Mrs. Lange's parents reside.

O. P. Bassett and his grandson, E. B. Washburn, motored to Madison this week to attend the commencement exercises at the State University, where Mr. Washburn was a graduate last year.

H. Bauske is cutting heavily of Beauties, the first crop of consequence since the gas got into his greenhouses last winter.

Miss Carrie Eisman is leaving the Atlas Floral Co., July 5, to become the wife of John Maher in the latter part of July. Miss Eisman has been with the Atlas Floral Co. for four years and is so well liked personally and is so competent a florist that Mr. and Mrs. Williams are inclined to believe they do not share in Mr. Maher's good fortune.

The son of N. P. Miller and Miss Margaret Schaefer were married June 9. Miss Josephine Then was bridesmaid.

The wholesale houses will begin closing at 5 p. m., July 1.

The Lord & Burnham Co. has a neat office, well equipped, at 829 Rookery building, with George Sykes in charge. He reports that there are a good many private greenhouse contracts in sight in this section and to these he is giving his undivided attention.

C. M. Dickinson and family have been at Pelican Lake for a vacation.

Bassett & Washburn note that always in June the first of the week brings a rush, because both weddings and commencements are held on Thursdays or earlier; Friday and Saturday are comparatively dull days. Carnot and Kaiserin are now in good crop at Hinsdale.

Competent greenhouse builders estimate that it will take close to $50,000 to put

KENNICOTT BROS. CO.

48-50 Wabash Avenue, CHICAGO
LONG DISTANCE PHONE, CENTRAL 466.

the Garfield park conservatories into good shape.

The George Wittbold Co. says that bedding out is still in full swing. The big business done this year has produced a scarcity of all vines, good vincas and English ivy being difficult to procure in this vicinity.

The Peterson Nursery reports the peony season advanced with unusual slowness. After beginning to cut, the first five days they sent only 23,000 blooms to the A. L. Randall Co. Then there was a big jump in the cut.

Carson-Pirie had their annual peony decoration last year. It was worth a great deal as an advertisement of the flower. Some 12,000 blooms are said to have been used, furnished by James King, Elmhurst.

E. F. Winterson was 42 years old June 22.

Schiller the Florist is the name of a corporation licensed at Springfield June 22; location, Chicago; object, to conduct a general florists' business; capital, $12,000; incorporators, George Asmus, Reinhold Schiller, Herman Schiller.

Charles D. Coventry, for many years with the W. W. Barnard Co., is attending the seed trade convention at Niagara Falls this week.

Among the visitors have been: Myer Heller, of the South Park Floral Co., New Castle, Ind.; O. B. Stevens, of Shenandoah, Ia.; Phil Scott, en route from Buffalo to Denver; Henry Wenberg, Batavia, Ill.

ST. LOUIS.

The Market.

The wholesale market displayed considerable activity last week. Work for school commencements caused the prices to advance somewhat, as stock was scarce in almost everything, except sweet peas, which are a glut. The demand for this is fairly good, but not strong enough to consume more than about half of the consignments that come in each morning. The bulk of them come from the Kirkwood florists. At the wholesale market we find a lot of poor roses and carnations, with few that would demand a fair price. Most of our local growers will begin to clean house soon and then we can look for a scarcity. Outside of those mentioned above, not much of anything is coming in now.

The weather has started in hot, and from now on we can look for little business in the flower line. In greens we have a nice lot of smilax, asparagus, and both fancy and common ferns.

Various Notes.

John Quinn has moved his flower store from Grand avenue to around the corner, at 3607 Finney avenue.

Margaret Klockenkemper was married last week to W. B. Mossingghoff. The bride is well known in the trade here.

From the reports of some of the members of the St. Louis Horticultural Society, the society is making preparations to hold the fall flower show in the new Coliseum the early part of November.

Henry C. Ostertag, chairman of the trustees of the Florists' Club, was out hustling all last week in the interests of the club's picnic next month, and says the souvenir program which he is compiling will more than pay all expenses. New and novel features will be presented, for which valuable prizes will be offered.

T. E. Waters, traveling salesman for the A. L. Randall Co., Chicago, made his first appearance with the local trade. He left a good impression and reports a satisfactory business.

Oscar Kuehn, head of the wire department at Smith's, was appointed official photographer at the Florists' Club picnic by Chairman Ostertag.

James Young, president of the C. Young & Sons Co., will spend part of the summer with his family at Atlantic City, N. J.

Mr. and Mrs. William Osseck celebrated their first wedding anniversary June 17 at the home of her parents, Mr. and Mrs. J. F. Windt. Their first-born, a boy a few weeks old, adds much joy and happiness to the grandparents.

John Bentzen says the wholesalers

have shown the white feather and have refused to play his team, claiming them too strong. So he has arranged to have the C. Young & Sons Co.'s team play against his team, known as the Bentzen Floral Co.'s team, at the Florists' Club picnic. This will be one of the features of the day.

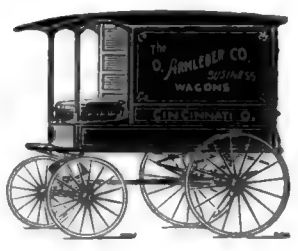
Adolph Brix says that he has had a splendid business season and is now busy with a general overhauling of his greenhouse plant. His daughter, Miss W. Brix, was recently married.

During the months of July and August the four wholesale houses will inaugurate the early closing, 5 o'clock the first five days of the week and 12 o'clock on Saturdays. This the employees are looking forward to with great pleasure.

Adolph Fehr, of Belleville, was in the flower market last week, buying supplies. Mr. Fehr reports a good business season.

The new residence of C. C. Sanders, at his greenhouse plant on the Henley road, is nearly completed and will be ready for the family the first week in August. The family has been living in the old homestead on Delmar boulevard since the fire.

A. W. Murray, who recently moved from Easton avenue to 1254 Union boulevard, says the business at the new location is much better than at the old place.



George Waldbart, Mrs. Ayers, Miss Newman, F. H. Weber, Ellison Floral Co. and F. C. Weber have had a busy week with work for school commencements. Other florists, in other parts of the city, also report a busy week with this kind of work.

Fred Foster, of the Foster Floral Co., says he is cutting a fine lot of sweet peas from his country place at Kinloch.

The banquet to gardeners, florists and nurserymen, provided for in the will of Henry Shaw, will this year be given in the form of an open-air collation at the Missouri Botanical Garden at noon, Thursday, July 1. All members of the St. Louis Florists' Club have been invited to attend. J. J. B.

CINCINNATI.

The Market.

While business was nothing to brag about, still all stock that could be classed as good sold at fair prices. There are lots of flowers coming in that are poor to very poor in quality, and it is these that suffer, as it is hard to move them at any price. This makes the average price of stock seem low, while as a matter of fact all really good stock is bringing fair prices. This has been a bad year for mildew on roses, and the florist who has been able to escape it this season can consider himself lucky. Mildewed roses are always bad stock to get a price for, and even though the buds are good they have to be sold at a sacrifice. Clean stock with inferior blossoms will always bring a better price.

Carnations are now nearing the end. The hot sunshine of the last few days has almost put the finishing touches to them. The stock coming in, except that from the far north, is small and does not keep well. The white varieties hold out the best. There is a good demand for carnations, notwithstanding the poor quality, and they sell readily, but at a low price. Outdoor sweet peas are in now in full force. Some fine ones are to be seen. They are needed now, but still it is hard to get a good price for them. The general line of outdoor stock is with us, such as candytuft, feverfew, etc. It is rather a drag now, but ought to go better shortly. Peonies continue to be good property and sell out clean. Greens are going nicely and the new eastern ferns are with us again.

Preparations for the Convention.

It is a pleasure to report how nicely all the arrangements for the silver jubilee of the S. A. F., to be held in this city in August, are being completed. Only a few minor details now remain to be worked out. The various committees have been hard at work, and at the meeting to be held at the Hotel Sinton Monday evening very favorable reports will be read. The various entertainments have been mapped out and decided upon. This in itself required no end of argument and discussion, as Cincinnati is a veritable summer resort and there were so many ways of entertainment that could have been utilized that it was a hard matter to decide what would be the very best and most enjoyable for the visiting florists. Those who have already visited this city in the summer are well aware of the various inducements it holds out to its citizens and visitors to enjoy themselves. Those who

have not been here have missed something that they will now have a chance to see and enjoy. We want to throw out all the inducements we can to all the florists of this great continent, so that by the time it is necessary to start for this city for the convention, all of them will decide to come, except those few who are unfortunate enough to be obliged to remain at home. We want all to come and we will do our best to make them feel that they are welcome. So make up your mind now to come, and don't let anything change it.

The baseball games to be played on Friday of convention week will be of unusual interest. We expect several teams representing our large cities to be on hand, and our local teams will be in the best of shape and trained to the minute, so that a battle royal may be expected. We would ask that all cities expecting to send teams will notify us at once, so that all necessary arrangements can be made. Address all communications to Frank Dellar, Station F, Price Hill, Cincinnati, O.

Mrs. Maynard, of Detroit, Mich., secretary of the Ladies' Society of American Florists, came to this city on Sunday, June 20, on business for her association. She is being entertained by Mrs. L. H. Kyrk, on Price Hill. Monday evening she will confer with the local committees on entertainments, and the final arrangements for the entertainment of the ladies will be made. This entertainment will probably be held at the Ludlow Lagoon. This is a beautiful pleasure garden, located near Ludlow, Ky. It is situated on the banks of a large lake and the surroundings are all that could be desired. The park is modern in every respect, and in it can be found all the up-to-date methods of entertainment. At the club-house can be found all manner of eatables and drinkables.

Various Notes.

The receiver's sale of the stock and greenhouses of W. K. Partridge has been quite successful so far. A great portion of the stock has been disposed of at retail from a store at Fourth and Race streets and good prices have been realized.

We have with us this week the National Association of Turners and the city is a wilderness of flags and bunting in their honor. The welcoming "Gut Heil" is to be seen and heard on all sides. Some 50,000 visitors are expected. Fountain Square is a mass of colored electric lights, and on Government Square an enormous stage has been erected, where the various athletic contests and evolutions for which the Turners are famous will take place.

Fred Gear went down to Louisville with the Shriners last week and reports having had a great time.

Wm. Murphy, superintendent of the trade exhibit at the convention, is receiving a large stack of mail every day and space is rapidly being allotted in the exhibition hall. We would again advise those intending to make an exhibit to lose no time. It always pays to be among the first.

Frank Benson, of Indianapolis, was in town Sunday and was busy visiting his many friends.

Mr. Lampert, of Xenia, O., was a caller.

C. J. OHMER.

SPRINGFIELD, OHIO.

Current Comment.

June is the month for settlements of balances on accounts between the numerous wholesale and mail order florists in this district, and it is apparent that money in hand is considerably more plentiful than for several seasons past, indicating a return of general prosperity.

The local retailers are now having their innings with weddings, commencements and various social functions thereby occasioned.

Although Charles Unglaub's plant was erected and put into operation something more than a year ago, the writer this week made his first visit to it. It is located in a territory comparatively new to the trade and beyond the confines of the municipality. A walk of about a mile from the terminus of the car lines is necessary in order to reach this place, but upon arrival it is found that Mr. Unglaub has practically everything to be desired to make him independent upon his fourteen acres of choice land, which adjoins the Detroit, Toledo & Ironton railway, one of the principal coal carrying lines in this state. Various kinds of soil, from clay to black loam, are to be found, as well as gravel and sand, and a strong, never-failing spring of water makes connection with the city mains unnecessary, a Standard pump giving it ample force and volume. A brick-set boiler with a capacity of about 100 horse-power supplies steam to the four large houses, and two similar boilers lying in the yard show that Mr. Unglaub contemplates a gradual enlargement of his capacity. Carnations exclusively are

SUBJECT TO MARKET CHANGE.

grown here and the local market has been kept well supplied. At the older and smaller place on West Mulberry street, where Mr. Unglaub has for many years lived and conducted a local retail business in miscellaneous plants, chrysanthemums will hereafter be grown. Mr. Unglaub is a hard and indefatigable worker, who has paddled his own canoe until it has now arrived at a destination of some importance.

The recently completed new house of the Leedle Rosary has been planted with Richmond and Killarney, which, with Bride, Maid and Rhea Reid already producing, will give Springfield a much greater variety and quantity of roses than heretofore enjoyed and also enable the company to supply more to buyers in the large cities. The plant now consists of two houses, each 30x300, and one 24x125, making a total of 35,000 feet of glass. In the smaller house carnations have been grown, but these have been discarded and Bride and Maid roses planted in their place, the future policy being to grow roses exclusively. Nothing but own-root stock has been planted, Springfield-grown as far as obtainable, and most excellent results have already been achieved in the growing department, while the sales and shipping have been successfully managed by A. C. Leedle. A new Gem City marine boiler of ninety horse-power will be installed, in addition to the one of fifty-four horse-power of the same type, both having double fire boxes. A concrete tank has been provided, for liquid manure, which will be pumped through the water pipes as occasion may require, by means of a steam pump. This is the first attempt in this vicinity to grow cut roses on a commercial scale and is being watched with interest by the local fraternity, all of whom have for years been too much absorbed in more diversified and constantly expanding lines to make any attempt in this direction, but there seems to be no reason why Springfield should not become as prominent in the cut rose industry as in the growing of rose plants. Ge Dale.

Bay City, Mich.—Schweers & Potratz have dissolved partnership. The business will be continued by Carl B. Schweers.

ROCHESTER, N. Y.

The Market.

The month of June to date has been a busy one, weddings and commencements creating a good demand for roses and sweet peas. Both of these flowers have been short of the demand. There seems to be a falling off in the quantity of flowers used for commencement exercises in comparison with previous years. Carnations have been a glut on the market for some time, and almost impossible to move at any price. The plant trade shows a remarkable increase and practically everything salable is cleaned up.

Various Notes.

The regular monthly meeting of the Rochester Commercial Florists' Association was held June 14. Plans of the forthcoming flower show were shown and met with the approval of those present. A. H. Secker, vice-president of the association, announced his resignation, being about to remove to Philadelphia. E. P. Wilson was elected to the office made vacant by the resignation of Mr. Secker.

That the trade is in a flourishing condition is evident from the number of new houses going up. E. H. Reuston is putting up a new house for asparagus; Purssell & Cragg have two rose houses in process of construction; Charles Lee has his new house planted to asters for an early crop, the plants looking fine. George Crooke & Co. contemplate adding to their plant.

W. T. Fonda has gone to Niagara Falls to attend the seedsmen's convention. H. B. S.

NEW ORLEANS.

Southern Society Dead.

The New Orleans Horticultural Society held its monthly meeting June 17. The most important subject discussed was what to do with the Society of Southern Florists, which was formed some time ago. It is to be regretted that the southern states did not take the matter in hand with more will, and the interest manifested in the society has been so cold that the originators of the project found that the best way was to disband the association. No society can exist without at least its members paying their dues, and Secretary P. Abele said that almost every member was neglecting to do this. It was decided to have the N. O. H. S. outing meeting at Milneburg, one of the resorts of Lake Pontchartrain, where a banquet will be given July 15. At the same time the election of officers for the ensuing year will take place. H. Papworth, Paul Abele and Henry Cook are of the arrangements committee.

H. Dressel was presented as a new member.

Various Notes.

The aster crop has suffered from the change of the weather. It seems that the plants raised on benches stand better. To illustrate this new process of growing R. Eichling brought to the last club meeting a few blooms as a sample of a patch growing at U. J. Virgin's.

Business is quite dull, the stores being idle when not doing funeral work.

M. M. L.

MOUNT KISCO, N. Y.

The exhibition of the Westchester Horticultural and Agricultural Society took place in the Mount Kisco Opera House Friday, June 18, 19 and 20. There was a splendid display of roses, strawberries and perennial flowers. H. A. Spavins, a local florist, worked hard to make the exhibition the success that it was and is entitled to great credit for his decoration of the exhibition hall. There was a particularly noteworthy display in the peony class, the first prize going to W. Cowdin, Matthew Rall gardener, and the second to Clarence Whitman, W. Wills gardener. The second prize exhibit was remarkable in that fifty varieties of the finest peonies were exhibited, all correctly named, but, unfortunately, the flowers were a little past their best. A collection of pressed native flowers, exhibited by Charles Hilderbrandt, gardener to Senator Agnew, was of much interest.

Among the other prize winners were the following: J. Borden Harriman, M. J. O'Brien gardener; Moses Taylor, R. W. Beatty gardener; Hon. Seth Low, Hugh Birch gardener; J. D. Laying, David Francis gardener; Col. Jay, A. L.

GREENHOUSES, HINSDALE, ILL. Office and Store, 76 Wabash Ave., CHICAGO

Mention The Review when you write.

Marshall gardener; M. B. Fuller, J. Fleuti gardener.

The Westchester County Horticultural and Agricultural Society is all alive. It will hold another exhibition in the autumn, in addition to the chrysanthemum show. The work of the various members is increasing the interest of a great many amateurs in this locality.

The judges, who gave complete satisfaction, were Harry A. Bunyard, of New York, and Robert Angus, of Tarrytown.

WEST GROVE, PA.

P. J. Lynch recently returned from a business trip to the middle west.

The venerable Charles Dingee now rides in a new automobile.

N. Leon Wintzer, of the Henry A. Dreer Nursery, is spending a day or two with his father, Antoine Wintzer.

The Dingee & Conard Co. is making preparations for planting a large crop of mushrooms for the fall market.

Gaston Renard, the prosperous Avondale florist, has become an enthusiastic motorist. He has purchased a five horsepower motorcycle and is frequently seen speeding on the fine macadam roads.

S. Morris Jones, treasurer of the Conard & Jones Co., takes great pride in his fine vegetable garden. Mr. Jones is an expert at gardening and attends to this part of his many duties in the early morning.

The West Grove Civic Club is active in its work this summer. Under its auspices a lecture on the subject, "How to Improve Our Home Surroundings," has been held. Many prizes are offered as an incentive to keep lawns and grounds in a neat condition. The geranium contest, which is confined to the children, is a unique and interesting one. To stimulate interest and pride in the growing of plants, each child between the ages of 6 and 15 years, upon payment of 5 cents, is given a 4-inch pot geranium, and toward the end of the season judges will award suitable prizes for the best and largest plants. Robert Pyle, president of the Conard & Jones Co., is a leading member of the Civic Club and it is largely due to his initiative and inspiration that so much work in this direction is being done. J. M. L.

NEW BEDFORD, MASS.

The Market.

The cut flower trade remains about the same as last week, with the usual summer dullness. Funeral work, however, is good, using up lots of the surplus flowers. Carnations are quite plentiful now; 35 cents per dozen retail is the price. Roses are selling at $1 to $1.50 per dozen retail. These are of fair quality. Sweet peas bring 75 cents and $1 per hundred blooms. Outdoor roses are now coming into bloom; also a few sweet peas. Carnations are looking well in the field. About all of the mum stock is planted out in the benches now.

The call for geraniums and other bedding plants for this season is about over. This has been a good year for these, with prices somewhere near those of other years. School graduations will be here in another week or so and the florists are looking forward to a good call for flowers. The weather is still warm, with occasional showers, making it ideal growing weather.

Various Notes.

Wm. S. Brown, the florist, is advertising a new method of spraying and caring for trees on private grounds and streets.

Wm. P. Peirce still keeps up his good window displays. Julius Rositzky is the efficient manager here. W. L.

ERIE, PA.

The Market.

The peony is king at present. It is being used in large numbers for decorating purposes. Tea roses are somewhat on the decline, as the hot weather is affecting them. American Beauty and Rhea Reid are as good as ever.

Various Notes.

Mr. and Mrs. Wm. F. Kasting and two little sons, of Buffalo, N. Y., have arrived to spend the summer months in Erie. They are the guests of Mr. and Mrs. Wise, of the Erie Floral Co.

Chas. Schiff has returned from his vacation, spent in Buffalo and Rochester.

G. Henry Baur has returned from Philadelphia, where he is a law student at the University of Pennsylvania. Mr. Baur will spend some time in the offices of Gunnison, Rilling & Fish this summer. B. P.

PHILADELPHIA.

The Rising Eastern Market.

The cut flower market was fairly active June 17 to 19. A perceptible falling off was evident June 21, with a slight revival on the two days following. The conditions governing supply have changed. The cool weather prevailing last week was succeeded June 20 by a decided rise in temperature, which proved too much for the flowers the strength of which was nearly spent, knocking them out completely. The stock that reached the market in good condition, not too open, and of quality had the call for whatever business was doing, only really choice stock leaving the city for points outside.

The orchid situation is uncertain. One day cattleyas are plentiful; the next day they are scarce. The demand created for gardenias has not entirely subsided with the advent of summer, the best southern flowers being carefully selected to fill special orders, the rest being jobbed off at low prices but not low as compared with previous years.

Sweet peas of high grade were retarded by the unfavorable conditions, so that prices ruled higher at the close of last week than is usual for the season. The difference in values on choice and poor stock is marked. The hot weather of the present week is rapidly increasing the supply.

Outdoor flowers are more numerous. Coryopsis, delphinium and cornflower are prized for their decorative effect. Water lilies of really choice sorts can be obtained in fair numbers.

Carnations are retrograding rapidly, the quantity of really choice blooms being smaller day by day as the growers discontinue shipping. There are still some flowers of shipable quality but the bulk of the stock belongs to the third grade.

Asparagus is easier in price, the best bunches only being used by the discriminating buyers.

Valley has been selling fairly well; the June weddings you know; there have been days when good valley was scarce.

Some heavy rose orders were filled last week. The best eastern may be termed fancy and the best local select. These only were used in quantities felt by the market. Beauty, Kaiserin, Killarney and My Maryland were preferred.

Atlantic City has been a heavy buyer in this market.

The Schaffer Trust.

The action of the Pennsylvania Horticultural Society, at its special meeting on June 15, in voting to sanction the sale of Horticultural hall, cannot be clearly understood without full knowledge of all the facts in the case.

The will of the late Miss Elizabeth Shäffer, as directed by her brother, the late William L. Shäffer, probated in 1887, left to the Pennsylvania Horticultural Society the ground and building on Broad street above Spruce. This building was burned in 1893, the society receiving $25,000 insurance. November 28, 1894, an arrangement was made between a syndicate and the society for the purpose of erecting a new hall on the site of the old one. This arrangement provided that the syndicate was to furnish $200,000, the society the insurance money of $25,000, the total amount to be expended in the erection of a new building. The syndicate was to receive bonds bearing interest at the rate of three per cent, the society to have the use of the hall for exhibitions and meetings free of charge.

All revenue derived from the rental of the hall after expenses and interest had been paid was to be devoted to a sinking fund to be used for the purpose of retiring the bonds, the plan being that the bonds should be paid off gradually until at the end of thirty years all the bonds would be paid and the building returned to the society without cost. This plan was carried into execution the following year; the present beautiful hall was erected and all went well until the erection of the Bellevue-Stratford hotel, when the social element transferred its entertainments there, decreasing the

hall's revenue considerably thereby. The bondholders, 120 in number, who built the hall to meet their social needs rather than as a business enterprise, feeling that its usefulness had been outlived, asked that last week's meeting be called in order to secure the society's consent to terminate their agreement by selling the property. Great diversity of opinion existed among the members of the society. A large number, a majority probably, favored declining the proposal and holding the hall. When the matter had been carefully discussed it was shown that this would mean an outlay of money for which the society was wholly unprepared. These members then felt that the bondholders should be satisfied with 50 cents on the dollar were permission to sell granted. A number of influential members, however, dissented from this view, holding that the bondholders should be paid dollar for dollar and a few of them interest in full. They knew that the bondholders were in control of the situation and the society's fair name was at stake. It is doubtful whether a sale will be made at once. An offer of $500,000 has been received for the hall, but this the experts consider far below the real value.

The trustees of the Shäffer trust are George Vaux, Jr., Robert Craig, William Hacker and the Girard Trust Co. They will sell as instructed by the society, provided certain legal obstacles can be overcome, and this will take time. It is quite possible that the society will continue in the present home for another season.

Clement B. Newbold, president of the Pennsylvania Horticultural Society, favors the sale. He believes that the income to be derived from the proceeds properly invested will enable the society to extend its usefulness. Mr. Newbold's idea of the society's future includes an office and room for meetings in the center of the city, an arboretum in the suburbs, exhibitions in desirable places centrally located and easy of access to the flower-loving public; in short, that the society should be the horticultural head and center of the state that its name implies.

The Florists' Club occupies rooms in the basement of Horticultural hall; should the hall be sold, the club will have to move. David Rust, who is secretary of both organizations, said that

THE Florists' Supply House of America

LONG-HANDLED BASKETS

Flowers are inexpensive now, making a show for little money. Nothing helps you better. he feels sure that the club's interests will be protected by the society in the event of a sale and that an offer will be made looking to their joint occupancy of new quarters.

Various Notes.

T. Nelson Geiger opened his new store on Thirteenth street, above Walnut street, June 19. W. W. Faust and C. A. Moorby were his aids. A vase of delicately shaded larkspur from Mr. Geiger's place was a feature of the decorations.

D. Fuerstenberg, president of the Florex Gardens and of the Floral Exchange, sails June 24 for a trip to Norway, the land of the midnight sun.

Percy B. Regby, treasurer of the S. S. Pennock-Meehan Co., spent a few days at Cromwell, Conn., visiting the scenes of his youth.

Louis Berger and Charles Berger are interested in a new insecticide believed to be valuable.

Edward Reid has had heavy shipping orders during the last ten days.

Robert Kift has purchased a property on Chestnut street, with the thought of moving into it at some future day.

The Henry A. Dreer Co. is making improvements at Riverton.

The Collingdale Greenhouses are specializing on young chrysanthemum plants.

George Burton has sent his first orchids to the Leo Niessen Co.

Robert A. Craig is confident that his experiment in croton culture is a step in the right direction.

The wholesale cut flower houses start summer this week by closing at 6 p. m.

Tomatoes, not sweet peas, will be the first crop in the mammoth new house at the Florex Gardens, North Wales, Pa.

William Warner Harper has sent out invitations to an iris show at the Andorra Nurseries, June 22 to 30. PHIL.

The creditors of J. Stern & Co. have been called to meet July 2, at 10 a. m., at the office of Alfred Driver, referee in bankruptcy, 505 Chestnut street.

DOVER, N. H.—C. L. Howe's greenhouses, at Garrison Hill, are noticeable as being among the busiest places in town. Mr. Howe's shipping trade is steadily increasing.

The Best Plant Stand

On the market today. Comes in three sizes; is adjustable, and is made of Galvanized Iron or Oxidized Copper. With its aid you can place a plant from 6 to 48 inches from the floor. See illustration. Wire, write or phone us, and we will tell you our nearest agent.

NEW YORK.

The Market.

The veterans declare this to be one of the most trying Junes on record. Even the outlet by the commencement route is badly blocked. Over in Jersey City flowers are entirely prohibited, and even in New York and Brooklyn at many schools the sweet girl graduates must yield to the senseless edict of the authorities and go without their flowers into the cold world of intellectual competition.

There is an abundance of everything. Beauties touch 15 cents for a few selected, but before night the same grades will go for 8 cents. Last year it is interesting to note that June 21 Beauties were scarce at 25 cents. At the same date Brides and Maids advanced to 5 cents and carnations were selling at 2 cents. Now straight slips of roses go as low as $15 per thousand and carnations as low as $10, the best of them included. Lilies were never so low since time began. A big lot went to a Brooklyn plunger of the department store brigade at 1 cent each, several thousands of them Saturday, June 19. This is the limit and will make bulb exporters and importers sit up and take notice.

Last year supplies lessened at this date. Now the flood is at its height, owing to the delayed summer, which has only just arrived. Peonies are late. At this date last year they had vanished from the market. Now they are at their best in quality, with prices low and unsatisfactory.

Seldom have orchids exceeded the legitimate demand, but there are too many at present for even their widening field.

The outdoor gladioli are here. The quality of America and a few of the new varieties grown under glass has never been better.

The street outlet grows smaller. The sidewalk merchants are off for the ocean; 1 cent each for roses and carnations is the asking price of those who still cry their wares in the crowded streets.

Retail stores in New York are now flooded with the outdoor roses and spiræa, syringa and other hardy stock in endless quantity. Crimson ramblers are about ready for their annual demonstration.

Various Notes.

The New York Cut Flower Co. closes at 1 p. m. after July 1 for two months. It is a pity the whole wholesale contingent would not do likewise. It would be money in their jeans. Several of them on Twenty-eighth street say they will, but will they?

Steamers still take out the usual farewell floral offerings. M. A. Bowe sent a $100 airship of Beauties to the New York last week.

Thursday, July 1, is outing day for the Florists' Club. This is the last notification possible and those who miss it will have only themselves to blame. No matter what the weather, the affair is already a great success. A warm invitation is given by the club to all retail florists and gardeners to join in the festivities.

Robert Schultz is again in the harness, running his rose plant at Madison.

The auction days are waning rapidly. Tuesday, June 22, Elliott's annual palm sale was the leading event. The Fruit Auction Co. had a special sale of large phœnix and Cleary's Horticultural Co. had a big sale of bedding stock and bay trees. On the whole, the season has been satisfactory to the auction people.

Among the late visitors in New York from the Hub were E. Allen Peirce and Alex. Montgomery, Jr.

Congratulations are due Mr. and Mrs. Walter Sheridan on the completion of twenty-two years of happy marital life.

Charles Millang is renting part of his store on Sixth avenue and Twenty-seventh street and is building a balcony office in his store on the ground floor of the Coogan building.

Frank Millang and family moved June 22 to their country home, thirty-seven miles out, at Yorktown Heights.

W. H. Siebrecht, of Astoria, has purchased a country home with eight acres of ground, two miles distant from the village of Chappaqua, N. Y., and thirty-seven miles from New York city. His son-in-law will occupy his Astoria residence. Mr. Siebrecht expects to be at Cincinnati with a touring car full of eastern enthusiasts, including the famous Astoria invincible bowling club.

The Cut Flower Exchange, in the Coogan building, is fixing up for the summer with new ceilings, etc., the fall of the old ceiling last week occurring when the room was comparatively empty—a narrow escape for John Donaldson and the Long Island growers who crowd the big room in the early morning.

The Democratic Club's outing, June 22, was attended by many of the florists, the popular John Mallon, of Brooklyn, being vice-president of the organization.

Watson S. Woodruff, of Orange, Conn., president of the American Seed Trade Association, left Monday morning, June 21, in a special car, accompanied by many of the leading seedsmen of this city and vicinity, en route for the convention at Niagara Falls.

Harry Cathcart, Jr., of Newburgh, N. Y.; C. H. Totty, of Madison, and Joseph Fenrich and A. M. Henshaw, of New York, will journey to the Cincinnati convention in Mr. Cathcart's auto.

J. A. Fenrich has been requested to manage the New York bowling team for the convention and announces a few weeks' competition for team membership, to commence Tuesday evening, June 29, at Thumm's alleys.

The employees of A. J. Guttman have arranged for a fishing party from Staten Island about July 31. Miss Anna Levitt, bookkeeper for this house, will leave shortly for a month's vacation.

The Greek florists' outing will take place July 29 at Wetzel's. A repetition of last year's success is confidently anticipated.

Paul Pfitzer, of Stuttgart, Germany, was in the city Saturday, June 19, representing Wilhelm Pfitzer, nurseryman and seedsman of that city. He is on his way to Japan.

Thomas King, a well known character in the wholesale market, took his own life one night this week by leaping from the elevated railroad station at One Hun-

dred and Tenth street and Ninth avenue, 120 feet high. He had peddled flowers for many years.

Mr. and Mrs. Jurgens, of Newport, R. I., were visitors last week, after several days' holiday up the Hudson and at popular eastern resorts.

The auto excursion to Frank Niquet's, at Patchogue, L. I., started from the residence of W. Siebrecht, of Astoria, on the morning of June 19. The participants in the trip were W. H. Siebrecht, Sr., Henry Siebrecht, Herman Lorentz, Phil Einsmann, Phil Kessler, Peter Jacobson, John Donaldson and John Miesem. Mr. Niquet made the visit a most enjoyable one with dinner and a bowling match. The bowlers rolled four games, Mr. Niquet making high score of 233. Phil Kessler was second and John Donaldson third, with scores close to 200. Mr. Niquet has a fine plant, growing only carnations and averaging a cut now of between 3,000 and 4,000 a day, which are handled by Walter Sheridan.

The eldest daughter of Chas. Weber, of Lynbrook, graduated June 21 with high honors.

Chas. Lenker, of Freeport, is sending some fine herbaceous stock to the wholesale market.

Kessler Bros. have their greenhouses over in Jersey filled already with ferns for the fall trade.

Mr. and Mrs. Chas. Levy and family are summering at Sea Gate, L. I.

Bowling.

June 15 the Astoria Club bowled for the last time this season, with the following scores:

Player.	1st	2d	3d
Miesem	171	170	167
Lorentz	175	108	129
Jacobson	170	133	128
H. Siebrecht	144	145	134
C. Schwacke	142	176	137
Einsmann	143	170	124
Kessler	195	118	134
Donaldson	191	139	189
W. H. Siebrecht, Sr.	147	103	140
Doerhoefer	143	137	167
Bleckwen	140	101	104
McMullen	139	128	139
W. H. Siebrecht, Jr.	125	130	103
Edmonson	..	125	133

After the bowling the club presented President Siebrecht with a handsome bowling ball, the address being made by Mr. Bleckwen. J. Austin Shaw.

BOSTON.

The Market.

There has been a considerable improvement in business this week, due to the many school and other graduation exercises, and the outlook for good trade the balance of the month is promising. Weather last week held unusually cool, but warmer conditions prevail this week. Peonies are at their flood tide; popular colors sell well, but for dull shades the call is light. For roses the call has been quite good, Killarney, Carnot, Kaiserin and Richmond being the favorites. The hot weather is telling on many of the roses, which are coming small and poor. Outdoor hybrids are on the market and are selling at good prices, particularly Jacq, Laing and Luizet. Carnations are mostly poor and are largely neglected; prices on these continue on the down grade.

Sweet peas are coming in more plentifully from outdoors, and if of good quality sell well. There are still quite a few gladioli, for which demand is rather poor. Callas are over and lilies in little demand. Valley from outdoors is over, but indoor stock sells quite well, as does Spanish iris grown outdoors. Bachelor buttons and yellow marguerites continue to sell well. For asparagus and both hardy and adiantum ferns the demand is good. June trade on the whole has been fully up to expectations and an advance over that of a year ago.

Club Field Day.

Delightful weather favored the Gardeners' and Florists' Club on the occasion of its field day to E. J. Shaylor's peony gardens, June 17. Taking electric cars to Norumbega park, the forty members who made the trip were met by barges kindly furnished by Mr. Shaylor and conveyed to his home, which is romantically situated at an elevation of 300 feet above sea level and commands an extensive view over a good portion of Boston and many of its suburbs. The splendid collection of peonies which are Mr. Shaylor's special pets was at once inspected on arrival. These are flowering later than usual, but, thanks to the cool weather and abundant moisture, are remarkably vigorous. While a number of the later varieties were only in tight bud, many of the early and midseason ones made a gorgeous show.

The following were some of the varieties noted: Mme. de Verneville, one of the best whites, excellent habit; Festiva Maxima, still a leader; Festiva, preferred by some to Festiva Maxima, a better plant for bedding purposes, stands up better under wind and rain; Duchess de Nemours (Calot), fine, fragrant, pure white; Duchess de Nemours (Guerin), excellent rosy pink; Mme. de Treyeran, fine pink; Mme. Crousse, useful white; Mme. Guyot, the yellow center makes this a distinct variety; Mme. Calot, fine white; Philomele, guard petals pink, center pale yellow; Marchioness of Lansdowne, guard petals delicate pink, center white, fine variety; Mme. Breon, guard petals pale pink, center sulphury yellow; M. Dupont, excellent white; Octave Demay, fine, delicate pink; Mr. Shaylor's latest acquisition, labelled as

the true Lady Alexandra Duff, a fine variety, different from the many other varieties we have seen of this extremely variable Kelway peony; Marguerite Gerard, excellent light pink; L' Esperance, good, bright pink; Baroness Schroeder, fine white; rosea superba, good rose-pink; Mme. Emile Lemoine, superb delicate pink; Venus, a beautiful light pink; M. Jules Elie, good commercial rose-pink; M. M. Cahuzac, probably the best dark red; Felix Crousse, dark red; Duc de Wellington, Taglioni, lutea plenissima, Mlle. Rosseau, grandiflora nivea, Marie Stuart, Mlle. Desbuissons, Adolphe Rousseau, Therese (Dessert), very fine. Sarah Bernhardt and Cytheree were other desirable sorts noted in a collection, comprising hundreds of the choicest sorts from Dessert, Calot, Lemoine, Kelway and other European hybridizers, as well as all the choicest American varieties.

After the peonies had been well scrutinized, an adjournment was made to Mr. Shaylor's home, where Mrs. and Miss Shaylor had tables groaning with a bountiful supply of good things for the inner man. After all had enjoyed their repast, President Downs made a short speech, thanking the hosts of the day for kindnesses received. Three cheers and a tiger were given with a will. Mr. Shaylor humorously and suitably responded. Boston was reached on the return trip at 7:30, after a pleasant and profitable outing.

Exhibition.

Although there was no provision in the schedule for a show at Horticultural hall June 19, there was a really fine exhibition, peonies of course predominating. William Thatcher, from Mrs. J. L. Gardner's, had a good collection. M. Sullivan, gardener to William Whitman, had 125 vases of choice varieties. T. C. Thurlow and E. J. Shaylor were each awarded a silver medal for superb collections, including all the choicest varieties. George Hollis had eighteen varieties of excellent seedlings awarded honorable mention. C. W. Parker received honorable mention for Iris pallida Dalmatica and F. J. Rea a similar award for a display of seedling German irises. W. W. Rawson & Co. had a fine lot of Lilium croceum and Spanish iris, also awarded honorable mention.

There was great indignation at the closing of this interesting show at 3 o'clock Saturday afternoon. In justice to the exhibitors and many would-be visitors it should at least have been open until evening, although there would seem to have been no good reason why it could not have remained open Sunday afternoon also, as in the case of other shows. Such treatment of exhibitors can only result in harm to the society.

Selection of Varieties.

At the last meeting of the Boston Gardeners' and Florists' Club the following were favored as the best hardy H. P. roses for the vicinity of Boston: Mme. G. Luizet, Mrs. John Laing, Ulrich Brunner, Margaret Dickson, Frau Karl Druschki, Mrs. Sharman Crawford, Victor Hugo, Prince Camille de Rohan, Duke of Edinburg, Captain Hayward, Paul Neyron, General Jacqueminot, Alfred Colomb, Magna Charta and Baron de Bonstettin.

The following climbers were most popular: Hiawatha, Farquhar, Dorothy Perkins, Leuchtstern, Lady Gay, Trier, Tausendschon, Carmine Pillar, Mrs. W. C. Egan and Sweetheart.

The following dozen perennials were given as the best for cut flower purposes: Peonies, in variety; Phlox Miss Lingard, Delphinium formosum cœlestinum, Kniphofia Pfitzeri, Heliopsis Pitcheriana, Campanula persicifolia in variety, Anemone Japonica alba, Gypsophila paniculata, Dictamnus Fraxinella, pink and white; astilbes, especially Queen of Holland; Centaurea montana rubra, Tritonia hybrida (Montbretias).

For design work the undermentioned were recommended: Double and single pyrethrums, Achillea Ptarmica The Pearl, epimediums, Euphorbia corollata, Lilium tenuifolium, Gypsophila paniculata nana, Lychnis Flos-cuculi plenissimi, pink and white; Delphinium Belladonna, Aster Chapmani, Phlox divaricata and Statice latifolia.

Various Notes.

A successful flower and fruit show was held at Belmont, Mass., June 17. Strawberries and roses were the special features.

Herbert T. Capers, the popular Music Hall market salesman, was married June 16 to Miss Evans, daughter of Charles Evans, the well known Watertown florist. The honeymoon was spent in New York.

W. N. Craig.

MICHIGAN.

The Central Florists' store, 112 West Main street, Kalamazoo, is just opening to the trade and is one of the most attractive business places in the city.

The Owosso Floral Co. is adding to its buildings on North Hickory street, Owosso. The new house will require about 20,000 square feet of glass.

The Greenville Floral Co., of Greenville, is building additional houses. The company's outside orders are steadily increasing.

The aldermen of Lansing are considering a proposition to establish a municipal greenhouse, to provide plants for the parks and cemeteries.

The Grand Rapids Greenhouse Co. gave its first annual picnic to its employees June 17 at Jenison park.

A. G.

FREEPORT, ILL.

The Freeport Floral Co. is the title of a new corporation, the organization of which was completed June 14, to take over the flower and seed business so long conducted by Louis Bauscher.

As already reported in the Review, the capital stock is $25,000. The officers are as follows: President, D. C. L. Mease; vice-president, W. N. Cronkrite; secretary and general manager, Louis Bauscher; treasurer, C. H. Little; foreman, Adolph Pitterle. The same persons constitute the board of directors.

The business, it is said, has grown so fast of late that this change is made to

allow of its further enlargement. For the present, and until the new plant, a little farther out on Adams street, is completed, the business will be conducted at the old location. Arrangements have been made for the erection of large greenhouses on the new site—new in one sense, although Mr. Bauscher has owned it for a long time. Two carloads of material have already arrived.

MOLINE, ILL.

G. A. Stephens has sold his greenhouses, at Tenth avenue, between Fifth and Sixth avenues, to a new firm which has been organized under the name of Peterson & Eckstam Bros. F. A. Peterson is a shoe man who has been in the shoe business for the last eight years at 1225 Fifth avenue, and Elmer Eckstam is an expert gardener. Mr. Eckstam was employed for several years as gardener for the Deere estate and of late has had charge of Mr. Stephens' greenhouses.

In addition to the greenhouse business, the new firm has twenty acres of land at Forty-first street and Twelfth avenue, on which shrubbery, shade and fruit trees will be grown and plant seeds will be raised. As downtown headquarters, the firm has rented the store now occupied by Mr. Peterson's shoe business.

The greenhouses, which were erected by Mr. Stephens, are under 40,000 square feet of glass. The purchase price, it is understood, was $35,000.

ELBERON, N. J.

The third annual rose and strawberry show of the Elberon Horticultural Society was held June 17 and in point of merit surpassed all previous efforts of the society. All the members put great effort in the work and the outside attendance was past expectations. There were twenty-two classes and all were keenly competed for. The principal exhibitors were James Kennedy, Joseph Kennedy, James Seymour, Benj. Wyckoff, Peter Ewen, Wm. Dowlen and Charles De Wilde. Anthony Bauer was awarded two certificates of merit and a certificate for culture. Joseph Kennedy received two certificates for culture, James Seymour one, Chas. De Wilde three and Peter Ewen three; these in addition to the premiums each won in the regular classes. A. B.

EVANSVILLE, IND.

Business has been good since Decoration day. Carnations and roses are plentiful, but are small and prices are low. Outdoor flowers are plentiful. Funeral work has been the chief item for the retailers.

June 20 C. A. Morgan, of the Morgan Floral Co., and J. C. Hoffman, of Henderson, Ky., were in town. E. L. F.

ATTICA, IND. — The greenhouses and hotbeds of the Attica Floral Co. were badly damaged by a recent hail storm. Jasper Cheak, the manager, reports that the losses will reach $500.

Nursery and Florist Business For Sale

Owing to failing health, the proprietor offers a profitable business at a bargain; the annual sales reach about half the amount asked for the property; stock in house better than ever before in its 30 years' existence; entire property and good will offered; present manager could remain. Address J. Freeman, 511 Board of Trade Building, Indianapolis, Ind.

Greenhouse Mechanic

Situation wanted, by American, 23 years old, as general greenhouse mechanic on commercial place or with a greenhouse construction company; good steamfitter, carpenter and glazier; able to take charge of all kinds of structural work about greenhouses; can draw plans for heating systems, construction, etc.; 6 years' experience; good salary expected. Address

No. 49, care Florists' Review, Chicago

For Sale

Greenhouse plant of 25,000 ft. of glass; an up-to-date place, heated by steam, and cheap fuel; the houses are in good condition, well stocked with everything for wholesale and retail trade; also flower and seed store, with fixtures; 7-room house and 8 acres of land; the business is worth at least $12,000 a year; have made enough to retire and want to sell, or will lease to a responsible party with privilege of buying; it will take $3000.00 to swing the deal, so don't answer if you haven't this amount in cash. This is an excellent opportunity and is worth investigating. Address No. 41, care Florists' Review Chicago

For Sale
Greenhouse Property

Located at Somerset and Howard Sts., North Plainfield, Somerset County, New Jersey. Dimensions, 248 ft. x 106 ft.; contains 9 greenhouses, 20 ft. x 175 ft., steel frames; trolley lines pass property; will sell cheap and on easy terms. For particulars apply to

F. B. DAILEY, care F. Berg & Co., ORANGE, N. J.

FOR SALE

Greenhouse establishment in Chicago in good condition.

Fluegge Bros., 2701 N. Leavitt St., Chicago

ADS FOR RETAIL FLORISTS

To the Florist who wants to advertise, but hasn't time or ability to prepare his ads.: Expert in horticultural advertising will prepare local newspaper ads. for retail florists; 4-inch single column or 2-inch double column ads., $1.00 each; larger sizes in proportion; ask for sample ad.; booklets and circulars written and printed. Address No. 57, care Florists' Review, Chicago.

FOR SALE

GREENHOUSE; stocked with general varieties of plants suitable for city trade. Will suit a florist of small means, to start on. Splendid opening.

Built for private use and pleasure, but find it too large, and other business interests preclude my giving it attention

To a man who comes well recommended, I will give a good showing to make money.

FRANK TRIMBLE (Owner)

85 Madison Ave., MEMPHIS, TENN.

FOR SALE

The GREENHOUSE PROPERTY, to close the ESTATE OF M. J. LYNCH, Deceased

A GOOD INVESTMENT.

Enclosed please find my check for $1.40 in payment for my half-inch card one month in the department for Leading Retail Florists in the Review. This has been a good investment for me ever since I made the yearly contract, and is getting better right along.

George C. Baker.

San Antonio, Tex.

PROVIDENCE, R. I.

The Market.

It is a good many years since the month of June has been so busy as the present one. Always a good one for weddings and graduations, this year has seen a social function made of every recital given by pupils in dancing, singing, piano, violin, elocution or whatever it might be, and this has meant one or more bouquets, baskets or other floral pieces for each participant. This has served to greatly stimulate business and will mean the piecing out of a good month. But this month will finish the season and from now till cool weather there will be practically nothing but funeral work.

Various Notes.

William B. Hazard returned home June 16 from a week's automobile trip to East Moriches, L. I. He has 20,000 tomato plants under glass that are heavily set and from which he is picking large quantities daily.

Ernest Carl is bringing in some fine begonia plants in pots. He had the principal floral tributes from the various German societies for the funeral of Prof. Hermann Mueller, teacher of German languages in the public schools, June 21.

The store of Thomas Keller, doing business as the Keller Co., at 220 Weybosset street, was closed June 12 and the stock and fixtures sold at auction on mortgage June 18. Ed Brooks, of the T. J. Johnston Co., purchased most of the stock.

L. Hay, of East Providence, is bringing in some fine peonies, especially Festiva Maxima, also some fine sweet peas.

Eugene McCarron, 398 Hope street, has just completed a new front to his

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., Watson S. Woodruff, Orange, Conn.; First Vice-pres., J. C. Robinson, Waterloo, Neb.; Sec'y and Treas., C. E. Kendel, Cleveland. Twenty-seventh annual convention, Niagara Falls, Ont., June 22 to 24, 1909.

THE illness of W. W. Barnard, Chicago, is reported to have passed the critical stage.

D. M. FERRY & Co., Detroit, are now represented in the American Seed Trade Association by Kirby B. White, who was elected to membership at Niagara Falls this week.

THE New York pure seed law is dead, having failed to receive the signature of the governor. Marshall H. Duryea, of Nungesser & Co., who has led the seedsmen in their efforts to get a reasonable law, states that nothing further can come of the matter until both houses of the legislature meet again next winter.

NIAGARA FALLS CONVENTION.

Seed Trade in Annual Session.

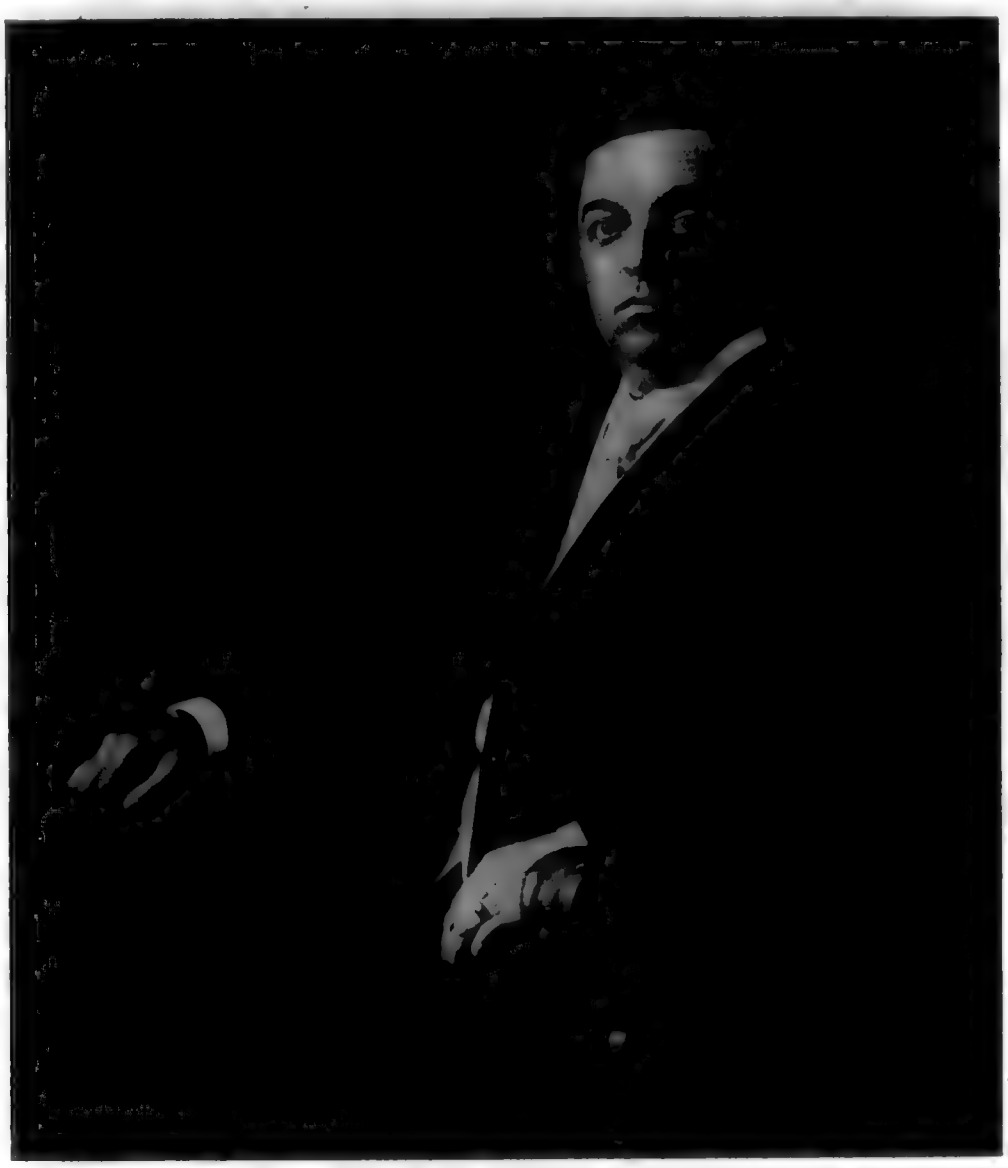
The twenty-seventh annual convention of the American Seed Trade Association opened at the Clifton House, Niagara Falls, Ont., June 22. The association never has had a more delightful place of meeting, the attendance was large and the interest keen.

The convention was called to order by President Watson S. Woodruff, of Orange, Conn. The usual address of welcome was delivered by Hon. R. P. Slater, mayor of Niagara Falls, Ont., and responded to by H. W. Wood, of Richmond, Va., in a felicitous way. After congratulating members upon the representative attendance, President Woodruff delivered his address, which was referred to a committee of five, consisting of Messrs. J. C. Robinson, Walter P. Stokes, C. H. Breck, Charles Dickinson and Albert McCullough, who at a later hour recommended concurrence in its various recommendations. A vote of thanks was returned to the president for his able address, on motion of Captain Landreth. The address as far as it refers to the paramount issues is printed in full, beginning on page 44 of this paper.

New Members Elected.

New members elected were: Kirby B. White, Detroit, Mich.; Cargill Elevator Co., Minneapolis, Minn.; Edwin C. Foltz, Louisville, Ky., and D. B. Gurney, Yankton, S. D.; Lyons H. Williams, of Williams Seed Co., Norfolk, Va.; H. A. Sculthorpe, Port Hope, Ont.; Northern Seed Co., Valley City, N. D.

The Year's Figures.



C. E. Kendel presented the following reports as secretary and treasurer:

Total membership, June, 1908, 155; received into membership at the last convention, a total of twelve; memberships dropped, failed and resigned, total five; net gain, seven, with a present membership of 162.

Treasurer's Report for 1909.

RECEIPTS.

From initiation fees	$ 350.00
From membership dues	1,445.00
From interest at bank	50.75
From sale of codes	15.89
Total	$1,861.64

Watson S. Woodruff.
(President American Seed Trade Association.)

DISBURSEMENTS.

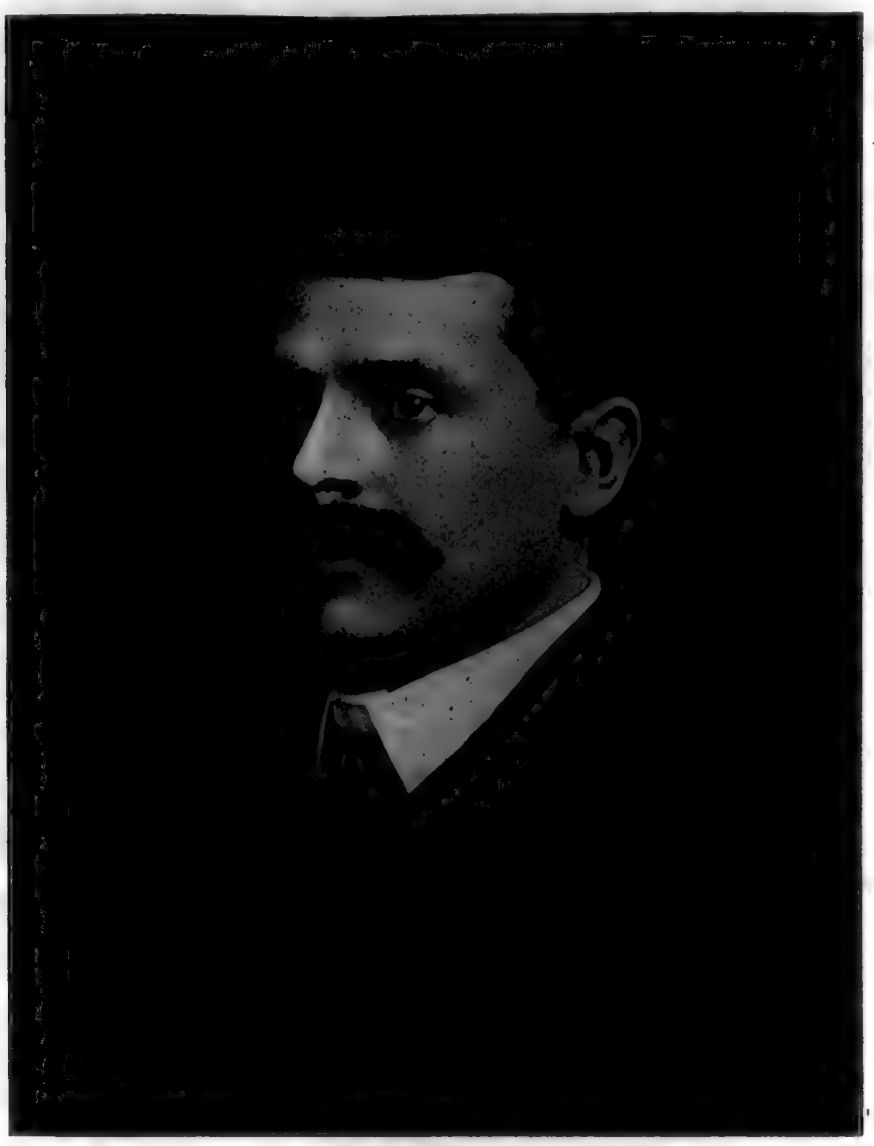
Secretary's salary	$ 250.00	
Stenographer's service	113.00	
National Council of Horticulture	200.00	
Expenses of executive, tariff committee, etc.	203.72	
Guest tickets at banquet	32.00	
Printing report and index	265.00	
Other printing and stationery	57.66	
Cuts and mailing cases	13.25	
Membership in National Board of Trade	25.00	
Membership in Wholesale Seedsmen's League	25.00	
Membership in Merchants' and Manufacturers' Association	10.00	
Postage	31.19	
Badges	32.50	
Incidentals	3.55	
Total		$1,261.87
Balance		$ 599.77

Various Reports.

The auditing committee, F. W. Bolgiano, S. E. Briggs and Ben P. Corneli, reported the books in good shape and the accounts correct.

Albert McCullough presented a report of the delegates to the National Board of Trade. Himself and W. Atlee Burpee had participated in important work on committees of the National Board of Trade, on postal and other matters of mutual interest to the two associations.

C. E. Kendel presented a report of the delegates to the National Council of Horticulture, showing the great value of the work of the council to the seed trade and horticultural interests.



C. F. Wood, of the committee on weights and measures, read a letter from F. E. Richman and D. C. Palmer, subcommittee of the National Conference on Weights and Measures, and same was filed without action at this time.

The application of Linnæus Allen to continue the membership of C. L. Allen, deceased, was favorably reported by the membership committee and concurred in.

Federal Seed Legislation.

George S. Green, chairman of the committee on seed legislation, presented a report of the committee referring to its general federal aspect, and Charles N. Page, vice-chairman, presented a separate report referring to seed legislation in the various states and territories.

Mr. Green's report favored laws to prevent the importation of adulterated and low grade seeds as for the general good of the trade and the public; he recommended the passage of a proposed bill carrying out this idea. With regard to absolute freedom from dodder in the minutest ratio, he felt that a minimum percentage should be favored, such as will not exclude commercially valuable seed in years when a sufficient supply cannot be obtained in this country. The European screenings should be excluded from this country. In regard to prohibited seeds, a reasonable margin of tolerance should be shown. As to germination, hard and fast rules should not be adopted. The methods of testing for germination are so variable, and the results of tests vary so much in various hands, that it really is unreasonable to try to enforce a criminal law, the punishment based on such evidence as can be possible with regard to germination of seeds. Seeds that are above a certain minimum standard should not have to be labeled, for while there are laws against burglary, the seedsman should not have to be compelled to tag himself as not a burglar. He deprecated the fact that much of the legislation seemed to be class in its nature in that it endeavored

C. E. Kendel.
(Secretary American Seed Trade Association.)

to except the farmer from the operations of the same law that is sought to be enforced as against the seedsman.

Chas. N. Page's report commented on the large amount of crude and ill-considered legislation that has been attempted, and gave an exhaustive review of the present condition of seed legislation in the various states. In many of the states, legislation so drastic had been attempted that its effect would have been not only to knock the seedsmen out of business, but to absolutely render unsalable all the seeds produced in the states affected. In conclusion, he said that the American Seed Trade Association does not object to any reasonable, sane national or state legislation affecting seeds.

The committee recommended that a committee of three be appointed to confer with a similar committee from the National Association of State Seed Analysts, to agree, if possible, on the draft of a uniform state seed law to take the place of the many objectionable laws which now exist. This recommendation was concurred in, and also the recommendation by President Woodruff that in future statutory enactments separate provisions be asked governing the sale of vegetable and flower seeds from those covering the sale of grass, clover and field seeds.

Attitude of Official Seed Analysts.

In the absence of the author at Tuesday's session, F. C. Woodruff read a paper prepared by Dr. H. Jenkins, president of the National Organization of Seed Analysts, setting forth the purpose and scope of his organization, to improve and unify present methods of seed testing and to work for more uniform and satisfactory laws regulating the sale of agricultural seeds. This work is being forced upon the attention of the agricultural stations of the country by the logic of events, and from the side of the retail purchaser, and follows as a consequence of other kinds of control work which state institutions are doing. Determination as to species as labeled, whether relatively light or heavy, what percentage of foreign matter contained, and the percentage of pure seed capable of germinating are obviously of the greatest value to the buyer. The results to be accomplished are similar in nature to what has been done in the past twenty-five years by the Association of Official Agricultural Chemists in securing accuracy and uniformity in fertilizers, etc. The association will welcome any facts or suggestions from the American Seed Trade Association membership and hopes to maintain cordial relations with them; in no sense is the organization hostile to the producers of or dealers in seeds; it aims to foster fair trade and legitimate competition.

Uses and Abuses of Legislation.

In the absence of the author, Secretary Kendel read the paper by Prof. L. H. Pammel, "Seed Legislation; its Uses and Abuses," and on motion of C. F. Wood a special vote of thanks to Messrs. Jenkins and Pammel was adopted, and 2,000 copies of Prof. Pammel's paper were ordered printed for distribution.

Prof. Pammel is of the Iowa State College of Agriculture and said in substance: "Cheap seeds mean poor seeds. The passage of laws in Europe, while improving quality there, has thrown a poor quality of seeds on the market here. Seed testing work originated by Dr. Nobbe, at Tharandt, Germany, in 1867, revealed startling conditions in the German trade in seeds. Later other control stations were started in other parts of Europe. Laws were enacted correcting abuses. Pioneer work was done in this country by Dr. Jenkins, of Connecticut, thirty years ago; subsequently by McCarthy of North Carolina, Dr. Beal of Michigan, Butz of Pennsylvania, Deval, Selby and Hicks of Ohio, Hillman of Nevada, Roberts and Freeman of Kansas, Harvey of Maine, Garman of Kentucky, Stewart, Rolf, Pammel and King of Iowa, Jones of Vermont, Hicks, Pieters, Brown, Key and Hillman of the U. S. Department of Agriculture, Clark, Paton, Saunders of Canada. This work has revealed the necessity of laws to restrict the sale of seeds containing weed impurities and to demand reasonable standards of vitality. The average demand is for seeds supplied by seedsmen, who must therefore furnish a good supply, reasonably free from noxious weeds and showing reasonably good germination. The farmer is anxious to put all the blame on the seed merchant, and the seed merchant claims he cannot be responsible for seed after it has left his hands.

"The farmer in many cases is responsible for weediness of seeds. Tests made by the writer and Miss Charlotte McKing in the spring of 1908 and 1909 on vitality of grass and clover seeds showed different results in the field than in incubator and greenhouse tests. The results were more striking during the unfavorable germinating season of 1909. (A table was presented showing these results of tests.)

"The writer believes it is not wise to fix a standard of purity and vitality by law, as in Iowa, but that it is better to allow a commission to fix these every year, especially as to vitality. Seed will vary as to germinating power, depending on many factors. Prof. Holden has shown how poor the vitality of corn was in Iowa under different conditions there. The same is true of other seeds. For a federal commission, let the members be the Secretary of Agriculture, a seed expert and a seedsman; in case of states the commission to consist of the state's botanist, the director of the state's experiment station and a seedsman.

"States should have uniform laws, so that seedsmen can adjust themselves to them. No laws should be passed that cannot be honestly and fairly well enforced. The buyer and seller must be equally considered. Laws should specify what noxious weeds are prohibited, or should require same to be specified on the label if present. Every law should contain sections on the adulteration of seeds. Substitution of Canadian blue grass for Kentucky blue grass, or fescue for awnless brome grass should not be tolerated, nor should seeds be misbranded. The farmer should be held equally responsible with the seedsman, and subject to the same laws, without favoritism to him. Clover and grass fields should be inspected before harvesting, by an expert, and those foul with weeds should not be harvested. Various experiment stations should publish more bulletins about seeds. The writer doubts the wisdom of publishing the names of seed merchants who have sold seeds found to be below the standard requirements. Cooperation is wanted between all interests. Imported seeds from Europe should be rigidly inspected and importations stopped of seeds containing Canadian blue grass, Canada thistle and dodder in

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., Watson S. Woodruff, Orange, Conn.; First Vice-pres., J. C. Robinson, Waterloo, Neb.; Sec'y and Treas., C. E. Kendel, Cleveland. Twenty-seventh annual convention, Niagara Falls, Ont., June 22 to 24, 1909.

THE illness of W. W. Barnard, Chicago, is reported to have passed the critical stage.

D. M. FERRY & Co., Detroit, are now represented in the American Seed Trade Association by Kirby B. White, who was elected to membership at Niagara Falls this week.

THE New York pure seed law is dead, having failed to receive the signature of the governor. Marshall H. Duryea, of Nungesser & Co., who has led the seedsmen in their efforts to get a reasonable law, states that nothing further can come of the matter until both houses of the legislature meet again next winter.

NIAGARA FALLS CONVENTION.

Seed Trade in Annual Session.

The twenty-seventh annual convention of the American Seed Trade Association opened at the Clifton House, Niagara Falls, Ont., June 22. The association never has had a more delightful place of meeting, the attendance was large and the interest keen.

The convention was called to order by President Watson S. Woodruff, of Orange, Conn. The usual address of welcome was delivered by Hon. R. P. Slater, mayor of Niagara Falls, Ont., and responded to by H. W. Wood, of Richmond, Va., in a felicitous way. After congratulating members upon the representative attendance, President Woodruff delivered his address, which was referred to a committee of five, consisting of Messrs. J. C. Robinson, Walter P. Stokes, C. H. Breck, Charles Dickinson and Albert McCullough, who at a later hour recommended concurrence in its various recommendations. A vote of thanks was returned to the president for his able address, on motion of Captain Landreth. The address as far as it refers to the paramount issues is printed in full, beginning on page 44 of this paper.

New Members Elected.

New members elected were: Kirby B. White, Detroit, Mich.; Cargill Elevator Co., Minneapolis, Minn.; Edwin C. Foltz, Louisville, Ky., and D. B. Gurney, Yankton, S. D.; Lyons H. Williams, of Williams Seed Co., Norfolk, Va.; H. A. Sculthorpe, Port Hope, Ont.; Northern Seed Co., Valley City, N. D.

Uses and Abuses of Legislation.

In the absence of the author, Secretary Kendel read the paper by Prof. L. H. Pammel, "Seed Legislation; its Uses and Abuses," and on motion of C. F. Wood a special vote of thanks to Messrs. Jenkins and Pammel was adopted, and 2,000 copies of Prof. Pammel's paper were ordered printed for distribution.

Prof. Pammel is of the Iowa State College of Agriculture and said in substance: "Cheap seeds mean poor seeds. The passage of laws in Europe, while improving quality there, has thrown a poor quality of seeds on the market here. Seed testing work originated by Dr. Nobbe, at Tharandt, Germany, in 1867, revealed startling conditions in the German trade in seeds. Later other control stations were started in other parts of Europe. Laws were enacted correcting abuses. Pioneer work was done in this country by Dr. Jenkins, of Connecticut, thirty years ago; subsequently by McCarthy of North Carolina, Dr. Beal of Michigan, Butz of Pennsylvania, Deval, Selby and Hicks of Ohio, Hillman of Nevada, Roberts and Freeman of Kansas, Harvey of Maine, Garman of Kentucky, Stewart, Rolf, Pammel and King of Iowa, Jones of Vermont, Hicks, Pieters, Brown, Key and Hillman of the U. S. Department of Agriculture, Clark, Paton, Saunders of Canada. This work has revealed the necessity of laws to restrict the sale of seeds containing weed impurities and to demand reasonable standards of vitality. The average demand is for seeds supplied by seedsmen, who must therefore furnish a good supply, reasonably free from noxious weeds and showing reasonably good germination. The farmer is anxious to put all the blame on the seed merchant, and the seed merchant claims he cannot be responsible for seed after it has left his hands.

"The farmer in many cases is responsible for weediness of seeds. Tests made by the writer and Miss Charlotte McKing in the spring of 1908 and 1909 on vitality of grass and clover seeds showed different results in the field than in incubator and greenhouse tests. The results were more striking during the unfavorable germinating season of 1909. (A table was presented showing these results of tests.)

"The writer believes it is not wise to fix a standard of purity and vitality by law, as in Iowa, but that it is better to allow a commission to fix these every year, especially as to vitality. Seed will vary as to germinating power, depending on many factors. Prof. Holden has shown how poor the vitality of corn was in Iowa under different conditions there. The same is true of other seeds. For a federal commission, let the members be the Secretary of Agriculture, a seed expert and a seedsman; in case of states the commission to consist of the state's botanist, the director of the state's experiment station and a seedsman.

"States should have uniform laws, so that seedsmen can adjust themselves to them. No laws should be passed that cannot be honestly and fairly well enforced. The buyer and seller must be equally considered. Laws should specify what noxious weeds are prohibited, or should require same to be specified on the label if present. Every law should contain sections on the adulteration of seeds. Substitution of Canadian blue grass for Kentucky blue grass, or fescue for awnless brome grass should not be tolerated, nor should seeds be misbranded. The farmer should be held equally responsible with the seedsman, and subject to the same laws, without favoritism to him. Clover and grass fields should be inspected before harvesting, by an expert, and those foul with weeds should not be harvested. Various experiment stations should publish more bulletins about seeds. The writer doubts the wisdom of publishing the names of seed merchants who have sold seeds found to be below the standard requirements. Cooperation is wanted between all interests. Imported seeds from Europe should be rigidly inspected and importations stopped of seeds containing Canadian blue grass, Canada thistle and dodder in

clover seed. The writer endorses the federal bill proposed by Mr. Green.

"Note the variance in results of tests by various state experiment stations and the U. S. Department of Agriculture. Until the methods are uniform the results will continue to vary. The writer urges the American Seed Trade Association to pursue experimental testing and compare results obtained by Edgar Brown, of the U. S. Department of Agriculture in checking up tests by various stations, etc. Laws cannot be effective until uniform testing methods prevail."

Favor Irrigation Experiments.

Capt. Burnett Landreth, of Bristol, Pa., read a paper on application of irrigation to old eastern farms, and presented some of the difficulties that might confront the establishment of such at first, because of riparian rights of farmers who would object to the water from any small stream being diverted by farmers above who might undertake to irrigate their own farms; therefore farmers in the east will be dependent for such irrigation upon wells driven on their own farms unless they reside upon the banks of large rivers from which they can draw water without objection. Whether from wells or rivers, the water would have to be pumped, which is expensive as compared with obtaining water by natural gravity as practiced in the west. As experiments to find the best way to surmount the difficulties would be expensive to individual farmers, Capt. Landreth suggested the establishment of an irrigating experimental station on the Potomac river near Washington, where all machinery may be assembled and illustrated and the problem worked out to a satisfactory solution, how best and most cheaply to raise the water from the surface of the Potomac, which is considerably below the level of the farm lands; how to carry it back to reservoirs, from whence it can be distributed under the most improved processes, etc. Mr. Landreth believed that manufacturers of irrigating machinery would be glad to loan the government machinery for such a practical demonstration of the possibilities of irrigation as so applied in the east, and he believed that the government could accomplish a great work for the country in this way.

Capt. Landreth presented the following resolution, which was adopted unanimously:

"While the American Seed Trade Association heartily approves of the promotion by the United States government of irrigation practices in the new west, the association is as firmly impressed with the belief that there is pressing room for some federal promotion of irrigation practices in the old east; consequently I move that there be appointed a committee of three to urge upon the Secretary of Agriculture of the United States, and the agricultural committees of the Senate and House, such congressional legislation as will establish a national irrigation station near the city of Washington, where may be assembled pumps, irrigating machinery and all appliances so that working processes may be shown as adapted to eastern conditions."

At a later session President Woodruff appointed the following committee to act under the Landreth resolution: H. W. Wood, Richmond, Va.; Albert McCullough, Cincinnati; J. M. Lupton, Mattituck, L. I., N. Y.

The convention adjourned until Wednesday morning, the evening being occupied with social pleasures, concert and dance at the Clifton Hotel.

Root Crops.

Prof. C. A. Seavitz, of the Ontario Agricultural College, Guelph, Ont., delivered a paper, "Root Crops," which was interesting and well received. It contained the results of careful tests conducted by the Agricultural College at Guelph, showing comparisons between the production of seeds of mangels, Swede turnips and carrots, home grown as compared with imported seeds of the same class. On the whole, home grown seed has proved higher in germination and more productive of roots than the imported. A large amount of work has been done to determine the influence of different selections of seeds upon the resulting crop. Ninety-four distinct experiments were conducted with large, medium-sized and small-sized seeds. In eighty-five per cent of the separate tests the larger seeds produced more heavily than the smaller. In a series of experiments in planting root seeds at different depths in the soil, through a series of years, on land of lower and higher levels, average clay loam soil, five years with mangels and sugar beets, four years with Swede turnips and carrots, average results showed best results at half an inch below the surface. Five years' experiments in thinning roots at different distances apart in the rows showed that as the distance increased the average size of the root increased in crop, with a decrease in the percentage of dry matter and also in yield of roots per acre. In five years' experiments in sowing sugar beets in rows at different distances apart, by having rows closer together, furnished larger yield of roots and larger yield of sugar per acre. In thinning sugar beets at different stages of growth in each of five years the greatest average yield per acre was obtained when thinning the plants when about two inches in height.

Government's Aims.

Edgar Brown, botanist in charge of the seed laboratory of the U. S. Department of Agriculture, Washington, D. C., gave a short address, explaining something of the work the department is doing in investigating the purity and quality of seeds, etc. He said that he realized that a large amount of poor seed is sold every year and that the reason that so low a quality is sold is because the farmer very largely wants something that he can get cheaply. He does not want to pay the price for good seed. The department wishes to show him his mistake by making it possible for him to know what he is getting. The result of the work being done will be to increase the market prices for good seed. That the general average of increase in quality is progressing has been shown during the last year, the samples being taken by the department indiscriminately showing a marked improvement, with greater care being exercised by the seedsmen in the examination of stock they are buying and selling. He said that many are availing themselves of the opportunity to visit the testing laboratory during the summer and extended an invitation to all whom they might be able to accommodate to visit same about July 13 and for six to eight weeks thereafter.

The address was well received and the apparently perfectly fair attitude of the speaker was commented on favorably. He was, however, subjected to a rapid fire of cross questions as to the methods of testing used, and as to the reasons why there have been so many state laws introduced of so heterogeneous a character during a comparatively recent period. The speaker parried or answered all questions skilfully and contended that the department had not instigated any legislation, while they were certainly not in a position to control the same and properly direct it. Messrs. C. F. Wood, F. C. Woodruff, S. A. Wilson, Chas. Dickinson, Albert McCullough, J. L. Peppard, F. H. Ebeling, J. C. Vaughan, E. F. Dibble and G. S. Green took part in the discussion. Mr. Vaughan raised a laugh by asking whether the inspectors testing would be willing to submit to the same kind of a penalty provided they made mistakes in testing that the laws of some states have sought to impose on seedsmen for errors in cleaning, etc. The speaker said that he was not one of the committee of the Association of State Seed Analysts that is now investigating the subject and he was glad that there was evident a disposition on the part of the A. S. T. A. and the Analysts' association to coöperate towards greater uniformity of tests, etc.

Prof. Bailey Talks.

At the Wednesday afternoon session, an address was delivered by Prof. L. H. Bailey, on "A Campaign for Rural Progress." He said that as there is a city phase of our civilization, so there is a country or rural phase, and it is as necessary that we should develop the one as the other, but we have heretofore given our attention chiefly to the city phase. More attention should be directed to the needs and development of country life. Our attention to the rural question has been largely on the side of making farms more profitable, but while agriculture for profit is a phase of country life not to be despised, it is not all of a country life. The country people must live their own lives along broad lines as well as city people do theirs. They must have their institutions, their recreations and their outlook on life. All these will contribute directly to the national life and welfare, to the welfare of the city people as well as of the country people themselves. Therefore it becomes a question of broad public policy for everyone to interest himself in these problems. We must bring the intelligence of all the people to bear on these great rural questions, in order that we may develop the rural civilization which will permanently satisfy the man of ideals and which will be a worthy contribution to the civilization of our time.

The foregoing brief resume of the more salient and main conclusions does not do justice to the breadth of view and comprehensive character of the address. A vote of thanks was returned to Prof. Bailey, on motion of Mr. Crossland.

A paper by J. M. Lupton, of Mattituck, L. I., N. Y., on "The Deterioration of Types in Cabbages," closed the afternoon's proceedings.

Color Photography.

At the banquet Wednesday evening, five-minute talks were given by Henry W. Wood, J. C. Robinson, E. L. Page, Geo. S. Green, Kirby White, Chas. Dickinson, S. E. Briggs, F. C. Woodruff, C. F. Wood, J. C. Vaughan, Arthur B. Clark, Curtis Nye Smith, Harry L. Holmes and Chas. N. Page, followed by an interesting lecture on color photography, illustrated with views from nature, by J. Horace McFarland, Harrisburg,

J. PITHER, Ltd.
Established 25 years. **UXBRIDGE, ENGLAND**

Bush Hill Park, Enfield, Midd'x, June, 1909.

Dear Sir:

re HUGH LOW & CO., Dissolved

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the Royal Nurseries, with the greater part of the stock. These Nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business. The staff, which is transferred practically intact, includes such well-known men as my representatives, Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook; Mr. Edward Tack, as orchid specialist and grower, and Mr. M. C. Allwood, the enthusiastic carnation man; Messrs. Moore, Reid and Meades amongst the roses and fruit trees, and Mr. Phillips in the general department. I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and inquiries, believe me to be always at your service as heretofore.

Obediently yours,
STUART H. LOW.

Please address all communications STUART LOW & CO., Bush Hill Park, Enfield, Midd'x.

Pa. The lecturer briefly sketched the scientific side of the Lumiere autochrome system of color photography, and referred to previous processes attempted. After stating some of the laws of light as applied to our perception of colors and the fact that white light is made up of three primaries, red, green and blue, he said that the Lumiere process originated in France after many years' experimentation. The autochrome plate is composed of a layer of transparent starch dots so fine as to be present on each plate to the number of some five millions to the square inch. These transparent dots have been colored in the three primaries and are intermixed. When deposited on the plate they give to it, viewed at a distance, a light gray appearance, and at a sufficient distance, white. Viewed closely through a microscope, each dot appears separately. This dot is the essential part of the Lumiere invention. It is covered by the ordinary photographic emulsion, and in the process of color photography the plate is placed in the camera in reverse fashion, so that all the light which reaches the sensitive surface must first pass through the layer of colored starch grains or dots. When exposure is made, all the light reflected from the petals, say, of a red rose, passes only through the red starch grains except sufficient of the blue and green to modify the red to the exact shade of the rose. The rest stops right at the starch grain layer and is absorbed. In the same way the green leaves reflect light which passes through the grain dots modified by the other colors. Thus each color reflects its own intensity of light action onto the sensitive photographic surface lying back of these marvelous starch grains. When developed by ordinary photographic means the chemical action places over each of these little dots which has been acted on, an appropriate amount of metallic silver. Immediately a wide departure is taken from the familiar photographic methods by subjecting the plate to chemical action which dissolves away every scrap of this silver which has been acted upon, thus uncovering the transparent starch grains which have been opposite any particular color reflection, and the remainder of the grains are left covered, so that when the plate is completed only the red dots opposite the red rose petals are uncovered and all others are wholly or partially veiled by deposited metallic silver.

The lecturer explained how when this plate is viewed closely by microscopic means it is seen that the brightest red contains green and blue and the brightest blue contains red and green, the astonishing fact being presented that there is no absolutely pure color in nature.

By far the most interesting part of the lecture to those not concerned in the technical aspects was the presentation of fifty or sixty examples of the autochrome, which were shown by a specially arranged stereopticon illuminated by a powerful electric light. The most delicate graduations of color in flowers, plants, trees and manufactured objects were noted. An extraordinary series of pictures of Niagara Falls showed the sheen and tint of the water apparently almost in motion. The commercial application of the process was illustrated by autochrome reproductions of work done from autochromes. Catalogue covers and the like were thrown on the screens in the exact colors in which the original appears, togetner with a separate showing of the printing process which intervened.

The lecture was an interesting presentation of a novel and important process new to most of the audience.

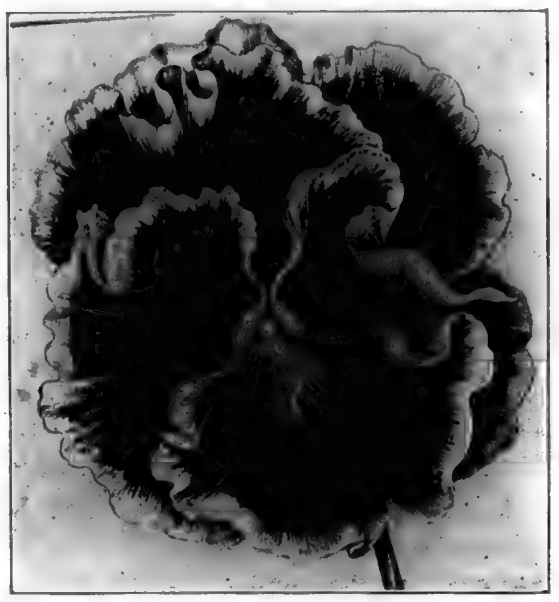
THE PRESIDENT'S ADDRESS.

National Legislation Not Imminent.

After brief reference to the general prosperity in the trade and to those members who died during the year, President Woodruff discussed the questions affecting seedsmen's interests, as follows:

We have been spared the anxiety and labor that came so severely upon my predecessor, Mr. Green, and his associates in struggling with the Mann pure seed bill in March and April of 1908, and as far as federal seed legislation is concerned the immediate future seems to offer no special resistance. However, Mr. Green, chairman of committee on seed legislation, has, with characteristic diplomacy, worked out a draft of a bill which he will tell you more about in his report later on.



Bills regulating the sale of agricultural seeds have been introduced in 1909 sessions of the following named state legislatures: New Hampshire, Wyoming, North Carolina, North Dakota, Michigan, Missouri, New York, South Dakota, Wisconsin, Iowa, Rhode Island and Minnesota. This presents what I consider one of the most serious matters that our association has ever had to face. I might go so far as to call it a crisis.

Flood of State Bills Alarming.

It is true that about nine states prior to 1909 enacted statutes affecting seeds, but this current year 1909 has been notable for the widespread interest in this subject in legislative bodies. So many seed bills have been filed, some fairly reasonable in their requirements, but most of them so severe that a contemplation of the effect of such laws, if passed generally, on the legitimate seed trade is not merely disquieting but is alarming. Within the past year these bills have been introduced in the legislatures of twelve states, and eight states have placed on their statute books so-called pure seed acts.

In one state the statute requires a guarantee of the percentages of both purity and germination of all seeds, a warranty which seed organizations and seed growers and merchants generally have after careful and mature consideration deemed unfair, impracticable and impossible. Already from that state are coming demands on seedsmen in other states to warrant the purity and germination of their seeds. As most legislation is the adoption of the legislation of other countries or states, the example of this state will undoubtedly be felt in future legislation. Another state statute, besides requiring warranty of purity and germination, demands that whoever sells seeds in that state shall pay a license tax of $25 per annum. This is the first attempt in this line, which, if generally followed, may entail rather a heavy item of expense to seedsmen doing a large interstate business. The constitutionality of this act is at least questionable, but it is nevertheless a statute law, and must be treated as such until it has been thoroughly tried out. Several states have recently proposed to fix arbitrary stand-

GIANT PANSY SEED

The KENILWORTH Strain

is unsurpassed; the immense flowers of 3½ to 4 inches are of perfect form and substance; every tint and shade is produced in striking combination and endless variation of beautiful colors and markings; it is the result of years of selection; it embraces the largest and best of English, French, German and American novelties; 1909 seed greatly improved by rich shades of brown, bronze, red and mahogany. New seed: 1000, 25c; 2000, 40c; 6000, $1; oz., $5.

RAINBOW is a blend of over 50 of the latest introductions of giant pansies, of the most beautiful, gorgeous colors, blotched, striped, veined, margined, etc. With every $1.00 worth of Kenilworth strain, I will send 1000 of Rainbow free; and with other amounts in like proportion.

CHAS. FROST Kenilworth N. J.

ards of purity and vitality of seeds. Such legislation is highly questionable. In Europe, where all of these questions have been prominently considered, no country has established by law arbitrary standards, for well known and oft repeated reasons. Other features of recent seed legislation are the elimination of weed seeds, locality where seed is grown, names of seed merchants or growers, applicability of law only to seeds sold in package or in bulk of one pound or more, severe fines or imprisonment, or both, etc. Not one statute or proposed bill adopts the principle of intentional deception. The Kentucky seed act, passed many years ago, stands alone in American statutes adopting this reasonable principle, similar to the adulteration of seeds act of Great Britain. There is no attempt to relieve the seedsmen from the rigors of the law in the case of an honest mistake.

It is hardly possible or necessary in my brief discussion of this subject to state in detail the many important features of legislation affecting our business, because we all, to a greater or less extent within the past year, have had contact with the serious conditions raised by this legislative interference.

How to Meet the Situation.

The proper and successful method or policies to be suggested or adopted by this important association, and by seedsmen generally, to meet the situation are not easily or lightly determined. In the first place, seedsmen are usually very busy men at the time of year when legislatures are considering these laws. It is, therefore, most trying to and almost impossible for them to keep an eye open for the introduction of seed bills and, if they are proposed, to carry on an active campaign of objection to apparently ill-advised legislation. Much more difficult is it to ask merchants individually, or as officers of this association, to create and systematically conduct an organization which shall take prompt and effective notice of all bills introduced in congress and all the state or territorial legislatures in the United States. There is no question that to do this is necessary.

I am told that in one legislature last winter a severe seed bill was enacted and no seedsmen in that state or any other

knew about it till some time after its passage, though there were as members of that legislature three seedsmen, two of whom were chairmen of important committees.

Another difficulty is to understand the legal effect of some of these seed bills, some of which are long, ambiguous and involved in legal technicalities and phraseology. It is highly necessary that we should have the aid of counsel who knows about the difficulties under which the seed business is carried on, who will study the question broadly, who will create and manage the work of legislative information above outlined, and who will judiciously, forcibly and opportunely present our cause, preferably in the early days of framing legislation or, if necessary, in the courts.

It is not suggested that counsel shall become the sole representative of this association. It seems wise to me that a committee of five be appointed by this convention from the members of this association, to which shall be intrusted the general work connected with seed legislation and all legal questions, guided by the directions of this convention as to policies, and that counsel be retained annually under a reasonable retainer.

Counsel Has Been Retained.

The Wholesale Seedsmen's League is, as you all know, a corporation closely associated in spirit and in active measures with this association. In fact, this association is a member of the league and has always had the closest and most satisfactory relations with it. Nineteen of the league's twenty-two members are members of our association, and the officers and directors of our association hold similar positions in the league. For the purpose of securing an effective organization to supply the service in legislative affairs above suggested it is most fitting and proper for our association to join with the league in this work, our ideas and objects being identical.

At a meeting of the board of directors of the league in New York city April 1, 1909, to which were invited the officers and members of the executive committee of this association, your president and several members of said committee attending, it was unanimously voted to appoint a committee of five, styled the committee on legal affairs, to be composed of three directors of the league who shall be members of this association, and the president and a member of the executive committee of this association. The duties of that committee were carefully and clearly stated.

Curtiss Nye Smith, of Boston, was considered competent to fill the position of counsel to this committee, and to the associations, and he was retained from April 1 for one year at a retainer of $1,200 per annum, the expenses and salary to be shared by both associations.

The duties of this committee and of counsel were fully stated in a circular letter sent in April to all members of both associations, so I shall only briefly state, to refresh your memory, that these duties are to acquire prompt knowledge of bills affecting seed interests introduced in congress or state legislatures, and to oppose unfair or advocate wise legislation. Counsel shall collect all seed laws, bulletins and cases, preparing opinions and when asked conducting legislative hearings. Besides advising the officers of the associations, counsel will advise without charge members of both associations on any legal matter pertaining to

their business as seedsmen, except that debts shall not be collected nor cases tried by counsel, except under a special arrangement of fees. A prominent firm of seedsmen, not members of either seed association, expressing approval of this scheme volunteered to contribute $100 annually to the expenses.

Supported by the unanimous approval of your officers and members of the executive committee and by my own judgment, I gave my conditional approval of this plan, the condition being that this convention, having the whole matter before it, give its formal approval and acceptance.

Trial Justifies Action.

I desire to add that since April, counsel has taken active measures to assist local seedsmen in their opposition to legislation in Missouri, Michigan and Rhode Island. He has written opinions and petitions, supplied lists of cases for seedsmen in litigation and given legal advice to seedsmen in their private business. He has organized, subject to the coöperation of this association in the plan above suggested, a system, quietly, quickly and efficiently to supply legislative information. His reports to the committee indicate an understanding of the needs and requirements of the situation and I believe he will be entirely successful in not only relieving seedsmen of a great burden of detail work, but also will supply us with that legal advice which will materially assist us in the important work before us.

I therefore present these matters to the convention with my recommendation that this association coöperate with the Wholesale Seedsmen's League in the appointment of the standing committee of legal affairs and the purpose for which said committee is organized, and in retaining C. N. Smith, of Boston, as counsel for said committee and this association for the year April 1, 1909, to April 1, 1910, and that this association make a proportionate contribution as its share of the expense thereof. Furthermore, I recommend that any resolutions of this convention directing or suggesting the policies of this association in regard to seed legislation or on legal matters be transferred to the chairman of said committee on legal affairs.

Before passing this most important subject, I desire to further emphasize the necessity of providing separate laws or paragraphs governing the sale of vegetable and flower seeds from those governing sale of grass, clover and field seeds. The physical possibility of determining accurately from samples of the seed itself, seeds of most grasses and clovers, and the physical impossibility of judging vegetable and flower seeds by sample, puts each in a class by itself ,and consequently it is my opinion that no legislation can or should be enacted in a single act that will be either workable, fair or just.

Work on the Tariff.

Next in importance to seed legislation to this association is, in my opinion, the tariff, and a vast amount of work has been done by the committee on tariffs and customs. To our chairman, J. C. Vaughan, in particular, is due the utmost

(Concluded on page 74.)

Vegetable Forcing.

Paul Swanson, the Chicago mushroom spawn maker who was among the first to employ the so-called pure culture process, who is now on a visit to his birthplace in Sweden, says that on his return he will abandon the manufacture of spawn except for his own use and will confine himself to producing mushrooms for the Chicago market.

GREENHOUSE VEGETABLES.

Boston, June 21.—Tomatoes, 15c to 20c lb.; cucumbers, $1.50 to $3.50 box.

New York, June 21.—Cucumbers, $2 to $3 box; mushrooms, 25c to 75c lb.; tomatoes, 10c to 12c lb.

Chicago, June 22.—Cucumbers, 35c to 50c doz.; lettuce, 10c to 12½c box; radishes, 75c to $1 per 100 bunches; mushrooms, 40c to 50c lb.

VEGETABLES FOR FALL CROP.

We have cucumbers growing in our houses at present, just coming to their best. What vegetables can we plant after they are done bearing, such as eggplant, cauliflower, tomatoes, celery or something of that kind? When should the seeds be sown? The cucumbers will be off about September 1 and lettuce sells slowly in our market till after the first of the year. Please give us a few pointers, also, on how to take care of them. We have a house 30x70 feet and we want something that would do well in the same temperature. R. & S.

You can replant the house to cucumbers September 1 and have them bearing in November and December. To do this, have the soil all ready to refill the house (if you are going to change the soil), so that the house will be empty only one or two days. Plant the seeds about August 10 and they will make nice little plants by the time the house is ready to replant. I think it pays to change the soil, using some clean, rich, soft soil that has been mixed up for a while, if possible.

If you do not want to grow lettuce or cucumbers, then tomatoes would be a good fall and winter crop. Plant the seed about July 15 and transplant to other boxes as soon as up. About three weeks after you plant the seed they will be ready to pot into 4-inch pots, and in three weeks more they will be ready to plant in the benches. Plant them about one foot apart in the rows, two rows to a 5-foot bench or one row to a 3-foot or 4-foot bench. Do not let them branch; single-stem plants pay better.

Eggplant will do well in the same temperature and the plants should be handled just the same, except that in benching them you should put them two feet apart in the row, as they get quite bushy. Cauliflower will do well in the same temperature as lettuce, but eggplant and tomatoes must have a warmer temperature. H. G.

NAME OF TREE.

I am sending a sprig of a tree growing in our yard. The tree is about fifteen feet high and in full bloom. It has many admirers and we are anxious to learn its name. M. L. C.

It is a pink form of the well-known dogwood, Cornus florida rubra. These trees have flowered magnificently everywhere this season, thanks to the late, mild winter, and both the white and pink varieties are among our finest flowering trees. W. N. C.

PACIFIC COAST.

Lebanon, Ore.—Geo. L. Allen was one of the judges of the flower exhibit at the recent county fair.

The Dalles, Ore.—Memorial day sales far exceeded anything of the kind ever known here before. All available stock was used up, on account of the scarcity of outdoor flowers. Shipping to outside towns was heavy. The new greenhouse of the Jewell Greenhouse Co. is progressing nicely, and everything is ready for the installation of the new Kewanee tubular boiler, for hot water heating.

MUMS AND CARNATIONS.

Would you please tell me how to treat carnations and chrysanthemums for winter blooming in this Oregon climate? They are out in the open now and seem to be running into one long stalk, as though they were going to bloom this summer. G. E. C.

We presume G. E. C. wishes to force carnations and chrysanthemums under glass and has them at present in the open ground. The young carnation plants should be pinched back several times before they are shifted, and they will get quite bushy if they are kept in growing condition. They should not be allowed to get checked in their growth, or the plants will be spindling and weak. It is not advisable here, on the Pacific coast, to give too much water, however; much better results will be had from light cultivation and a light mulching of straw or manure.

With chrysanthemums, if it is the intention to flower them under glass, the cuttings are rooted either inside or in the open, and when well rooted are shifted into flats and given partial shade. Or, if it is the intention to grow them in solid beds, they are planted wherever they are expected to be left to flower. They are not pinched back if big flowers are desired, although some sorts will force three or four blooms per plant almost as well as one flower. Should it be the intention of G. E. C. to grow the chrysanthemums outdoors for blooms, they should not be disturbed except to pinch off all lateral buds and give the plants a chance to force one big flower. If he is not so particular as to size, several stems may be allowed to develop on the same plant.

Always keep in mind that the chrysanthemum is a voracious feeder and needs plenty of water during its growing season. It transplants readily when small, but it is not advisable to try to handle large plants from the open ground and shift them into a greenhouse. G.

PORTLAND, ORE.

The Market.

Business for the last fortnight has been excellent. The supply about equals the demand for choice stock, and design work about utilizes the surplus. Roses are of good quality and realize good prices. Sweet peas and peonies predominate, as a few days of warm weather forced them in. Carnations are the old reliable, and are suitable for all occasions. It being commencement time, the pink and red varieties are at a premium. Basket arrangements are always in good taste, and it requires little effort on the part of the florist to effect sales. Callas are about over, as well as the demand for them. Easter lilies are in good supply, move well and are always a source of revenue to the florist.

Vegetable Plants

PARSLEY—$1 25 per 1000.

CABBAGE—Field-grown, all leading varieties, $1.00 per 1000; 10,000 and over, 85c per 1000.

Various Notes.

The annual rose festival closed June 12, after six days of entertaining. It was pronounced a success by all who attended. The floral parade was the grandest feature of the week. Quite an interest was manifested by the business men of the city, evidenced by the beautifully decorated cars and rigs to be seen on all sides. The rose exhibition was held June 8 and 9 at the California State building, where a profusion of rare outdoor blooms was shown, Caroline Testout being the predominating flower, and the emblem flower of Portland. Clarke Bros. won first premium on a pyramid arrangement of cut flowers, blooming and decorative plants. Tonseth Floral Co. took second with an artistically arranged group of Easter lilies and decorative plants. The judges were Wm. S. Sibson, of Portland; F. W. Settlemeir, of Woodburn, and Rev. J. J. Sutliger, of Vancouver.

Martin & Forbes are cutting some choice auratum lilies, the first of the season, which realize top prices.

Sam Graff, of Seattle, was a visitor this week, combining business and pleasure. He reports business good in the exposition city.

J. Gill, of Berkeley, Cal., spent a few days in the city, calling on the trade in the interest of the nursery business.

The Misses Patterson, of Eugene, Ore., spent several days here, securing stock for their range. They are considering building several houses this summer. Max Keisz is in charge of the range.

FIELD PLANTS Well branched, strong and healthy.

G. A. Kayser, Seattle, was a week end caller. He is connected with the H. E. Friday Co. E. R. C.

At the rose festival or annual exhibition of the Rose Society, in the California building, June 8, the two principal attractions were supplied by members of the trade.

Clarke Bros. had a magnificent mound of roses, lilies, calceolarias, geraniums, sweet peas, orchids, ferns, etc., rising over a rocky grotto, from which a stream of water issued, rippled over a stony bed and ended in a pool with lilies floating on its surface.

The Tonseth Floral Co. had a display of rare South American foliage plants, gloxinias, lilies, iris, etc., arranged in the form of two pyramids, with tiny incandescent lights gleaming out here and there, the whole surmounted by lilies and bulbs of light.

For these exhibits the first prize was awarded to Clarke Bros. and the second to the Tonseth Floral Co. The exhibition, as a whole, was pronounced "Portland's most perfect rose show."

SAN FRANCISCO.

The Market.

Business, although not brisk, continues to be fair. From appearances the schools have used more flowers at graduation exercises this year than ever before. The month of June has long been celebrated for its many weddings and this year, even in spite of the prevailing hard times, has seen an avalanche of weddings.

The weather continues cool, which is a great advantage in the handling of cut flowers. Never have carnations or roses been in better quality or more abundant than at present. The prices are low, however, on everything, except a few lines of fancy stock. Almost anything in the carnation line can be bought at from $1.50 to $2 per hundred. Roses bring about twice these prices for ordinary stock. Fancy Beauties are worth $2 per dozen, and fancy Brides, Maids, Liberty and Testout about one-half as much.

Valley has moved better during the last two or three weeks than it has at any time this season. Lilium longiflorum is scarce again and Lilium auratum is in much better demand than it is in supply. Bride gladioli have disappeared and the colored varieties find ready sale at from $2 to $4 per hundred. Sweet peas continue to be the best selling article on the market and many thousands of bunches are disposed of daily, both in the stores and by the basket-men, although they are getting slightly shorter-stemmed than they were. Owing to the favorable weather, they still are in prime condition.

Other classes of outside stock are not in oversupply, nor have they been at any time this season. The growers of stocks, gaillardias, coreopsis and similar stock, have had no trouble to dispose of their wares, and the chances are that there will be a greater amount of ground devoted to these plants next season.

Various Notes.

James H. Willey, representing the Leedham Bulb Co., of Santa Cruz, Cal., is in town interviewing the local dealers.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F. H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

EUGENE W. STARK, of Stark Bros. Nursery & Orchard Co., Louisiana, Mo., died June 15. A brief sketch of his life appears on page 13.

THE PEONY PRESIDENT.

Bertrand H. Farr is one of the large number of those who have come into the trade as recruits from the ranks of the amateurs. It often is said that music and flowers form a happy combination, and Mr. Farr was originally a music dealer. He now is proprietor of the Wyomissing Nursery, at Reading, Pa., and makes a specialty of such hardy plants as peonies, phloxes and irises. He has been one of the indefatigable workers of the Peony Society and was a logical choice for president to succeed C. W. Ward. The accompanying portrait is not as modern as most of Mr. Farr's methods and appurtenances are; the fact is, he has been too busy to have his picture taken in recent years.

Bertrand H. Farr.
(President American Peony Society.)

THE TEXAS CONVENTION.

The Texas Nurserymen's Association will hold its annual convention at College Station, Tex., July 28 and 29, in conjunction with the meetings of the Texas State Horticultural Society and the Texas Nut Growers' Association.

The officers of the Nurserymen's Association are: President, J. B. Baker, Fort Worth; vice-president, R. W. Holbert, Arcadia; secretary-treasurer, J. S. Kerr, Sherman. These Texans have live sessions. They have a unique way of assigning a topic to two men and getting both to respond, possibly for fear that failure to toe the mark will be misunderstood. On the program prepared for this year's meeting are the following:

"The Growing of Citrus Trees in Coastwise Texas," by Mr. Hudson, Edna, Tex., and W. A. Stockwell, Alvin, Tex.

"Is the Nurseryman in Texas Receiving Just Compensation for His Labor? If Not, Why Not?" by J. R. Mayhew, Waxahachie, and J. T. Foote, Durant, Okla.

"Ornamentals for the Coast Country" (considering species and varieties), by H. C. Styles, Raymondville, and S. Aria, Houston.

"The Growing of Healthy Apple and Peach Trees," by E. T. Ramsey, Austin, and F. W. Malley, Garrison.

"Shade Trees—What Kind and How to Handle for the Best Results," by C. C. Mayhew, Sherman, and W. A. Yates, Brenham.

"Landscape Improvement—The Part of the Nurseryman," by W. B. Munson, Denison, and John F. Sneed, Tyler.

"Since the Nurseryman Sets the Pace in Horticulture, Then Show Some Gaits," by E. W. Knox, San Antonio, and other nurserymen following in five-minute stunts.

"The New Inspection Law—How to be Operated," by Judge E. R. Kone, Austin, and Sam H. Dixon, Austin; free discussion.

INSPECTING IMPORTED STOCK.

A Bill Drafted by Nurserymen.

The bill introduced in the last congress provided for the inspection of all foreign nursery stock at ports of entry, and for the inspection of growing nursery stock in the United States which might be infested or be under suspicion of being infested by insects or diseases new to the United States, and provided for the issuance of certificates on such nursery stock after it had been inspected or treated if infestation was found to exist. This bill was killed through the efforts of the A. A. N. legislative committee and other nurserymen, but not until after it had passed in the lower house.

The substitute bill, drafted by the A. A. N. committee and now in the hands of Dr. L. O. Howard, the government entomologist, for consideration, provides for the inspection of all foreign nursery stock at destination, on the premises of the consignee or owner, and for the inspection and treatment of growing nursery stock if it is found to be infested or suspected of being infested by diseases new to the United States, but the new bill does not provide for any federal certificates to be attached to shipments, as it is not proposed by federal bill to inspect all nursery stock, but simply such as might be infested with new diseases or insects, and consequently the committee could not see where it would be possible to arrange the matter of certificates to cover

such a class of nursery stock, and without conflicting with the general line of growing nursery stock, which it is not expected to inspect by the federal department.

At the Rochester convention the committee reported that "further discussion on this matter will no doubt be necessary, and it will probably be necessary to agree on some sort of a bill before the next convention of the association, so that your committee would recommend that the legislative committee for next year be given full power and authority to act on this subject in general conformity to the lines of the proposed bill. This association may well congratulate itself that the bill introduced during the last session was not passed. Had it been enacted, it would have meant serious damage to the nursery interests of the country, for it does not seem possible that any adequate means could have been devised to satisfactorily inspect and repack, at ports of entry, the enormous quantity of foreign nursery stock entering this country. It would have meant damage to the stock, it would have meant serious delay in arrival at destination, and was altogether a bad proposition for every nurseryman in the country.

"The proposed bill provides for inspection of all foreign nursery stock at final destination, on the premises of the owner. To that there can be no valid objection. Such inspection is now being done in New York, Pennsylvania, Ohio and other states, and without any serious inconvenience or damage to the goods. It is probable that some federal legislation will be enacted, and if that is the case, it will be well for this association to join in the discussion of proposed legislation, and do what it can to shape up a law that will be practical and easily administered."

The bill prepared by the committee is as follows:

AN ACT

to provide for the inspection of nursery stock and to authorize the Secretary of Agriculture to establish a quarantine against the transportation in interstate commerce of diseased nursery stock or nursery stock infested with injurious insects, and making an appropriation to carry the same into effect.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled:

Section 1. That all nursery stock brought into the United States, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and ornamental trees and shrubs, shall be subject to inspection by official experts of the Department of Agriculture at final destination, on the premises of the owner or consignee.

Sec. 2. That any transportation company, person, or persons who shall receive, bring, or cause to be brought into the United States any nursery stock, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F. H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

EUGENE W. STARK, of Stark Bros. Nursery & Orchard Co., Louisiana, Mo., died June 15. A brief sketch of his life appears on page 13.

THE PEONY PRESIDENT.

Bertrand H. Farr is one of the large number of those who have come into the trade as recruits from the ranks of the amateurs. It often is said that music and flowers form a happy combination, and Mr. Farr was originally a music dealer. He now is proprietor of the Wyomissing Nursery, at Reading, Pa., and makes a specialty of such hardy plants as peonies, phloxes and irises. He has been one of the indefatigable workers of the Peony Society and was a logical choice for president to succeed C. W. Ward. The accompanying portrait is not as modern as most of Mr. Farr's methods and appurtenances are; the fact is, he has been too busy to have his picture taken in recent years.

Bertrand H. Farr.
(President American Peony Society.)

THE TEXAS CONVENTION.

The Texas Nurserymen's Association will hold its annual convention at College Station, Tex., July 28 and 29, in conjunction with the meetings of the Texas State Horticultural Society and the Texas Nut Growers' Association.

The officers of the Nurserymen's Association are: President, J. B. Baker, Fort Worth; vice-president, R. W. Holbert, Arcadia; secretary-treasurer, J. S. Kerr, Sherman. These Texans have live sessions. They have a unique way of assigning a topic to two men and getting both to respond, possibly for fear that failure to toe the mark will be misunderstood. On the program prepared for this year's meeting are the following:

"The Growing of Citrus Trees in Coastwise Texas," by Mr. Hudson, Edna, Tex., and W. A. Stockwell, Alvin, Tex.

"Is the Nurseryman in Texas Receiving Just Compensation for His Labor? If Not, Why Not?" by J. R. Mayhew, Waxahachie, and J. T. Foote, Durant, Okla.

"Ornamentals for the Coast Country" (considering species and varieties), by H. C. Styles, Raymondville, and S. Aria, Houston.

"The Growing of Healthy Apple and Peach Trees," by E. T. Ramsey, Austin, and F. W. Malley, Garrison.

"Shade Trees—What Kind and How to Handle for the Best Results," by C. C. Mayhew, Sherman, and W. A. Yates, Brenham.

ornamental trees and shrubs, shall, within twenty-four hours after the arrival thereof, notify the official expert of their arrival and delivery to consignee. The official expert or his representative is hereby authorized and empowered to enter into any warehouse or premises of consignee or owner, where such nursery stock or other described articles are received, for the purpose of making the inspection or examination herein provided for, and such examination shall be made within five days from such arrival thereof.

Sec. 3. That each case, box, package, crate, bale or bundle of nursery stock, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and ornamental trees and shrubs, imported or brought into the United States shall have plainly and legibly marked thereon the name and address of the shipper, owner, or person forwarding or shipping the same, and also the name and address of the person, firm, or corporation to whom the same is forwarded or shipped, or his or its responsible agent.

Sec. 4. That when any shipment of nursery stock, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and ornamental trees and shrubs, imported or brought into the United States is found infested with injurious insects or their eggs, larvæ, or pupæ, or with tree, plant or fruit disease or diseases, the contents of boxes or bales so infested or diseased may be disinfected at final destination, on the premises of the owner or consignee, under the supervision of the official expert. After disinfection has been so performed in a manner satisfactory to the official expert, the trees, vines, or other articles shall then be released. If it be not practicable to fully disinfect such stock, such portion of it as shall be infested shall be destroyed.

Sec. 5. That upon complaint, or reasonable ground on the part of the Secretary of Agriculture to believe that any nursery stock, including field-grown florists' stock, trees, shrubs, plants, vines, cuttings, grafts, scions, buds, pits, or seeds of fruit and ornamental trees and shrubs, grown within the United States, are infested with injurious insects or diseases new to the United States and likely to become subjects of interstate commerce, the Secretary of Agriculture shall cause the same to be inspected by a qualified expert, and, if need be, the trees or plants found infested shall be placed under quarantine until such infestation is removed.

Sec. 6. That it shall be unlawful for any person, persons, or corporation to deliver to any person, persons, or corporation, or to the postal service of the United States (except for scientific purposes, and by permission of the Secretary of Agriculture), for transportation from one state or territory or the District of Columbia to any other state or territory or the District of Columbia, or for exportation to any foreign country, any trees, plants, shrubs, vines, or other nursery stock which are under quarantine in accordance with the provisions of section five of this act. Any person, persons, firm, or corporation who shall in any way violate the provisions of this act, shall be deemed guilty of a misdemeanor, and on a conviction thereof shall be punished by a fine not to exceed $500 nor less than $200, or by imprisonment not to exceed one year, or both, at the discretion of the court.

Sec. 7. That the rules and regulations herein provided for shall be promulgated on or before the first day of June each year.

Sec. 8. That the sum of ..... dollars, to be available on the ..... day of ....., nineteen hundred and ....., or so much thereof as may be necessary, is hereby appropriated, out of any moneys in the treasury of the United States not otherwise appropriated, to carry into effect the provisions of this act.

Sec. 9. That this act shall take effect on and after the ..... day of ....., nineteen hundred and .....

Sec. 10. That the provisions of this act shall not prevent the inspection of any nursery stock or other described articles by the authorized inspector of any state or territory, at the final point of destination, in accordance with the laws of such state or territory.

...PLANT...

PEONIES

and grow your own flowers

ORDER NOW FOR SEPTEMBER DELIVERY.
WE GUARANTEE OUR STOCK TRUE TO NAME.

The demand for fine Peonies is growing with each year, and every florist should have at least a small plantation of them from which to supply his trade, both for the plants and for cutting the bloom. One can make no more profitable investment. The bloom if cut in the bud state lasts for a week or more. We offer as choice a list of Peonies as you will find in this country. To the collector, the varieties named will be attractive. To those who wish to increase their stock of desirable sorts, this list will appeal, and to the nurserymen and dealers who buy to sell, there will be found a list of choice varieties at moderate cost.

The prices named are for divisions, 2 to 5 eyes. We can also supply 2-year and 3-year plants. Write for prices. We issue a special list for fall. Write for it. Many of these sorts we can offer by the thousand.

White Peonies

	Per 12	Per 100
Mount Blanc (Syn. Alba Sulphurea), white guards, yellow center	$4.00	$30.00
Boadicea, fine, large, white, carmine spots	1.50	12.00
Duchesse De Nemours, pure white guards, yellow center, changing to white	1.25	10.00
Festiva Maxima, probably the best of all white Peonies, it can't be beat, paper white with carmine flakes	1.25	11.00
Golden Harvest, a tricolor, combining pink, white and yellow; when fully finished, it may be called a white	3.00	20.00
La Tulipe, very distinct in bud, light blush shading to white, with carmine markings	3.00	20.00
Madame Crousse, pure white, with the faintest tracing sometimes of carmine on edge of petals, grand	3.50	25.00
Madame de Verneville, a very free blooming white of great merit, has carmine spots like Festiva Maxima Superba	2.00	15.00
Marie Lemoine, ivory white of immense size, very late; this Peony must be seen to be appreciated	5.00	35 00
Queen Victoria (or Whitleyi), one of the old standbys, for a good low priced white	1.00	7.00
Achille, pearl pink, fading to white	1.00	7.00

INDIANAPOLIS.

The Market.

The trade this week has been holding its own. Commencements called for quantities of sweet peas and white roses. June weddings are numerous, calling for Brides, valley, orchids and sweet peas, but good sized decorations are few. There has been a little funeral work the last week, calling for lilies, sweet peas, roses and carnations. Killarneys are coming in good, but Brides and Maids are showing the effects of the warm weather. The plant business is about over, but there is some work to be done yet.

Various Notes.

E. W. Sellers and Henry Rhodenbeck are spending all their spare time taking the kinks out of their arms. Mr. Sellers has a spit ball that promises to be a winner.

The Roepke and Rieman Co. are cutting some fine lilies.

William Billingsly and wife left last week for Seattle, Wash. Mr. Billingsly expects to locate there permanently.

A. Warner attended the commencement at Knightstown this week.

Clarence Thomas is also a chicken-fancier and a raiser of prize bulldogs. With the aid of iron bars, Mr. Thomas has the bulldogs trained not to bother the chickens.

A sneak thief entered the store of Bertermann Bros. last week and took about $100 from the cash register. The safe was opened and after ransacking it they overlooked a drawer containing about $500.

John Rieman had a great deal of work for the commencements this week.

Franklin, Ind., is to have a new florist.

Any florist not having received a premium list of the State Fair may secure same from A. F. J. Baur.

Word has been received from New Castle that Herbert Heller is not so well.

A. N. PIERSON, Inc., Cromwell, Conn.

WHITE KILLARNEY (Waban Strain)

Grafted Stock, doz., $6; 100, $35; 250, $82.50; 500, $150; 1000, $300; 2500, $687.50; 5000, $1250

DETROIT.

The Market.

Business has been excellent. While nothing startling was done in the way of wedding decorations, formerly so prominent in June, still numerous smaller jobs kept many busy. Musicals and commencement exercises aided in using up much stock. Peonies and peas appear to be the most popular for this purpose.

Stock of all kinds is fairly plentiful, the only scarcity perhaps being on white peas. Smilax has been in big demand for decorative purposes.

Club Meeting.

The meeting of the D. F. C., held Monday evening, June 21, was well attended, considering the extremely hot evening. Vice-President Michael Bloy presided in the absence of President Brown.

Frank J. Rosser was unanimously elected a member. Mr. Pautke had the names of three new candidates, John Davidson, John Chalmers and Mike Sullivan.

Mr. Pochelon thought we should have some blooming plants now, and started quite an interesting discussion on this subject. A paper, entitled "The Advancement of the Retail Business," was read by Frank Danzer. He stated that the florists' business in America practically started in Philadelphia in 1824, and now the volume of business done annually amounts to nearly $50,000,000. Mr. Danzer believes the business has a future which lies with the florists themselves. We need a larger variety of flowers before we can increase our business, said the essayist.

Various Notes.

A. B. Lewis, of Pontiac, is a regular attendant at our club meetings.

Andrew Ferguson is seriously ill.

Mrs. C. H. Maynard went to Cincinnati June 20 to confer with the ladies and arrange convention matters for the Ladies' S. A. F. H. S.

PITTSBURG.

The Market.

Conditions have not changed much since last week's report; no special demand for anything that cannot be taken care of. There are enough good Kaiserin, Killarney and Richmond to take care of the trade, and plenty of mildewed stock to burn, as there is no demand for it. Beauties, lilies and carnations are good for this late in the season and there are quantities of cold storage peonies, beside phloxes, gaillardias and sweet peas to help out, and no scarcity of anything has been felt up to the present time.

The plantsmen have finished up the season pretty well satisfied.

Various Notes.

Some mention was made several weeks ago of the appearance of the matrimonial bug among the wholesalers. Karl Klinke, of the McCallum Co., is the latest victim. He left for a vacation a couple of weeks ago and surprised his friends by returning with a bride. The young lady was Miss Clara Goodman, of Rochester, N. Y. The wedding took place at the home of the bride, and they will take up their residence on Zephyr avenue, Sheridan.

T. P. Langhans, of the Pittsburg Cut Flower Co., has moved to his bungalow at Allison park for the summer.

Nicholas Harris, with several of his friends, sailed last week for Greece to remain a couple of months.

Visitors: A. E. Radke, Newell, W. Va.; C. W. Kennedy, of Oakmont Rose Gardens, Oil City, Pa.; Mr. Butz, of New Castle, Pa. Hoo-Hoo.

BRIDGEPORT, CONN.—Frank Fohrenbach owns a greenhouse here, and, in the words of a local newspaper, "is successfully and profitably engaged in floriculture."

DENVER.

The Market.

The condition of the flower market is practically unchanged since last report, except perhaps a slight falling off in the demand. With one or two events and the closing exercises of the schools and colleges, business might be said to be as good as could be expected.

Good American Beauties are in fair demand and somewhat scarce. While tea roses are fairly plentiful, they begin to show the effects of the warm weather, and at that they are not the factor that they were.

Sweet peas are now coming in abundantly. Consequently the prices commence to lower and the flowers are moving freely. Carnations are coming in in large quantities and some are of fine quality, considering the season, but the demand for good stock is limited, and the balance is being sacrificed. Any sale is a sale, and any price is a good price.

Peonies have been good and are yet, except the varieties which are about over. Good prices have been obtained for most of them. Other outside flowers have not put in much of an appearance as yet.

Various Notes.

The University Club's ball closed the social season Friday night, June 18. The most notable feature of this year's ball was the many dinners which preceded it. The decorations were unusually beautiful throughout the clubhouse and in the canopied flower garden arranged on the lawn. The broad hall was charmingly trimmed with Spanish moss, while red peonies, spiræas and greenery were used in all available spaces. Wild roses were used in the reception room. The mantels were decorated with pink peonies, the grand stairway with snowballs and asparagus ferns, and the balcony was a miniature forest of pine boughs. In the supper room were sweet peas and daisies. In fact, it is said it was the most pleasing effect ever produced at the club, and reflects credit on B. E. Gillis, of the Park Floral Co.

W. W. Wilmore is cutting some of the finest pink and white peonies seen in a long time.

J. A. Valentine and his superintendent, Mr. Sked, are fishing on the South Platte.

Most, if not all the flower shops, will close all day July 4. E. S. K.

I CAN say that the REVIEW is doing its duty.—S. W. SHANKLIN, White Marsh, Md.

Roses, Climbing Lady Gay, Crimson Rambler D. Perkins, 5½-in. to 6-in. pots, 25c, 30c to 40c.

REMEMBER

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa,** and those we offer were imported the Spring of 1908.

Florists should bear in mind that no garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, a consignment of small sizes just in, per Steamer Manitou, 35c, 40c, 50c and 60c.

Kentia Forsteriana and Belmoreana, just arrived, per Steamer Manitou, from Antwerp. Price for good stuff, 75c, $1.00, $1.25, $1.50, $2.00 each.

"Mein Haeuschen steht im Gruenen."

Look! look! look! Godfrey Aschmann's world-wide-known, pure white, fragrant moonvine, **Ipomoea Noctiflora,** with flowers as big as a saucer, 4-in pots, staked up, $12.00 per 100; 3-in., $8 00, and 2½-in., 5c in dozen or 100 lots.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

Godfrey Aschmann, West 1012 Ontario St. **Philadelphia, Pa.**

BALTIMORE.

The Market.

Few words are required to describe the conditions of the cut flower trade. It is a thing of shreds and patches; what is wanted no one has, and what one has nobody wants. Good roses are scarce, and even the poor ones are not more abundant than satisfactory. Those which come over from the City of Brotherly Love are in the same condition. Commencements are over, and now there remain only the few customary summer decorative demands, and the never remitting, but always irregular, calls for funerals.

For the last ten days we have had almost daily heavy downpours of rain. Outdoor stock has been much damaged. Carnations have begun to show the effects of the hot weather.

The commencement season, which is about over, took a great many flowers. It would seem that all the colleges and schools had larger classes than usual, and there is no disposition to hold back the floral tokens which bespeak the good wishes and felicitations of loving friends to the young folks. A few institutions frown on the custom, but there is an appropriateness in giving flowers which makes them still the favorite means of expressing the interest and pleasure of their senders.

Various Notes.

G. A. Lotze, of Glen Burnie, had one of his finest patches of sweet peas ruined by hail on Thursday, June 17. He has been cutting about 10,000 every morning and the hail cut all the young growth off.

Certain varieties of mum stock seem to be exceptionally scarce this season, due mostly to having stock frozen in coldframes.

Halliday Bros. have planted about 20,000 asters inside this season, which are looking exceptionally fine. They have a large stock of their new fern, Thomasonii, which is creating quite a sensation. It will take several houses to hold them when they are repotted. They have had several fine offers for the entire stock. They have one specimen which is in a 12-inch pot and any number in 6-inch and 8-inch pots.

The picnic of the Gardeners' and Florists' Club, which is to be held July 15, rain or shine, at Bay Shore Park, will be one of the largest gatherings the club has ever had, and the bowlers will have the time of their life.

Robt. L. Graham and wife are to take a trip to Yellowstone Park and the Pacific coast.

The park board is about to award the contract for 70,000 pansy plants. Q.

Asparagus Sprengeri

We have about 1000 fine plants in 4-inch pots, which we want to close out at $7.00 per 100; $60.00 per 1000.

These are fine plants for planting window boxes or vases, or for planting on benches to cut from later on. Plants are in fine condition, and big value.

GERANIUMS

ARE OUR SPECIALTY

We are preparing to grow Geraniums on quite an extensive scale, for next season; and claim to have the largest and most complete collection in the country, and are making very interesting Special Prices for November and December delivery. Write us about your probable requirement and we will convince you that it is more to your advantage to buy just the kinds you want in the fall than to bother with saving a few stock plants and working up stock yourself.

We have ready for shipment about 250,000 in 2 and 3-inch pots, which would make fine stock for Fall and Christmas sales. A splendid collection of Singles for Winter blooming at $2.00 per 100; $18.50 per 1000.

If you want to stock up now we will send you 1000, 50 each of 20 good distinct kinds, our selection, for $18.50, which we are confident would please you in every way.

NOVELTIES. We now offer one each of 100 varieties, 1907 and 1908 Novelties, good stocky plants from 3-inch pots, for $10.00. This collection should represent the highest development in Geraniums to date, as they come from the foremost introducers of the world.

Cash With Order.

PRESIDENT'S ADDRESS.

[Concluded from page 47.]

thanks of this association for the persistent and strenuous effort he has given in calling and attending meetings in New York city, Buffalo and Washington. Mr. Vaughan has been assisted greatly by the large number of personal letters that our members have written their congressmen and senators.

The great and all-important question has been the desire of the trade for specific duties in place of the present ad valorem schedule. The difficulties and objections to the ad valorem schedule are too obvious and well known to here enumerate.

At this writing no man can predict the final disposition that will be made of the seed schedule, but I am pleased to say that present indications point very strongly to the specific schedule being adopted. I have been kept informed by letters constantly from United States Senator Morgan G. Bulkeley, of Connecticut, of the status of the seed paragraph. On May 30, section 262 was agreed to by the senate. This section, revised as it now stands, reads as follows:

262. Seeds: Castor beans or seeds, 25 cents per bushel of fifty pounds; flaxseed or linseed and other oil seeds not specially provided for in this section, 25 cents per bushel of fifty-six pounds; poppy seed, 15 cents per bushel; mushroom spawn, and spinach seed, 1 cent per pound; beet, except sugar beet, carrot, corn salad, parsley, parsnip, radish, turnip and rutabaga seed, 4 cents per pound; cabbage, collard, kale and kohlrabi seed, 8 cents per pound; egg plant and pepper seed, 20 cents per pound; seeds of all kinds not specifically provided for in this section, 10 cents per pound.

If the house now concurs with the senate, we shall have what we all so eagerly desire, specific duties. It is difficult to place the credit for this where it belongs; several perhaps may claim it. In fact, one seedsman, a member of the association, told me a few days ago that we were indebted to one of the senators from his state for the whole seed schedule. Be this as it may, it matters not who claims or deserves the credit. The main point is to get specific duties and, to use the words of a famous admiral: "There will be glory enough for us all."

Disclaimer No Longer Tenable.

I am firmly of the belief that the death knell of low-grade seeds is sounding throughout our land, and that seeds of high grade will command much better prices than formerly, and cheap or low-grade seeds will go begging. I question if as many as five per cent of the planters of the nation would purchase so-termed low-grade or cheap seeds at any price, if they were told or knew the quality at time of purchase.

I am convinced that the time is rapidly approaching when we must sell our goods under a more liberal disclaimer than we have done for so many years. No one is more reluctant than I to abandon the bridge that has carried safely, but new demands and changes will eventually force a label that is more specific, enlightening and equitable than the mere statement of a name of a variety of seed, and the accompanying disclaimer now in general use.

I am well aware of the temporary injurious effect that might ensue from the use of a label specific in its statement of per cent of purity and vitality. To illustrate: Some twelve years ago, when the crop of onion seed, due purely to natural conditions, was far below the normal in vitality, I knew a house, actuated by noble purpose, that placed in a particular variety of onion seed a conspicuous label, in addition to the regular label, reading thus: "This onion seed, owing to unfavorable weather conditions at harvest time, shows a germinating power of seventy-four per cent. Please make your plantings accordingly, so as to get a full stand. We are sending you twenty-five per cent more seed than your order calls for gratis." Admittedly, this was a fair proposition, but what of the result? Many planters returned the seed and nearly all were so suspicious that they consented to use the seed only after a voluminous individual correspondence. A rare few were thankful for the information given, and planted accordingly.

This incident would almost prove the truth of the converse of the old adage: "What one don't know don't hurt him."

Integrity the Policy.

One of the most prominent and successful houses in the trade makes much of the phrase: "The plain truth about seeds." Does any one question the wisdom of the elaborate use, backed up by scrupulous practice, of this phrase on the part of this successful house?

Publicity is the cure for many abuses, as has been so forcibly illustrated throughout our land for the past few years, and we as an association should not only welcome but assist in every way consistent efforts to correct any abuses that may exist in our trade.

President Woodruff then discussed the congressional seed distribution, but made no recommendation. He considered postal matters and recommended that these be allowed to rest for a while. He recommended that a new standing committee be created to consider mutual insurance, and recommended the reimbursing of committee men for traveling expenses. Concluding, he said:

I beg to state that I am an optimist through and through on the future of the American seed trade. I cannot too strongly emphasize the object of our association as outlined in Article II of our constitution; viz.: "All stand together in the effort to improve and perfect a standard of business integrity which shall include purity of stocks, honesty of representation, carefulness of obligation, and promptness of execution."

Let us make "Quality" our watchword in the fullest sense of the term, and

put it in practice in deed as well as in word, and our reward will be sure and positive. If we will be the means of making two blades of grass to grow where one grew before, we will indeed leave the world the better for our having lived in it.

LOUISVILLE, KY.

The Market.

Last week was commencement week and the florists were quite busy getting out bouquets. The Girls' High School used about all of the stock that was to be had on Monday. This is the main commencement here. There was something doing every night in the way of a commencement and a few flowers were wanted for all of them; otherwise business was rather quiet. There was hardly any funeral work to be had, and stock has piled up, with the exception of good roses and carnations, which are scarce. Sweet peas are beginning to pile up, as almost everybody has a big batch of them. Other garden flowers are plentiful. Green goods are in good supply, with the exception of fancy ferns.

Various Notes.

William Mann, the retired local florist, is preparing for a trip to the seashore. He will be there eight or ten weeks.

Mr. and Mrs. Jacob Schulz are getting ready for a two months' trip through the golden west. They will leave July 3 for St. Louis, going from there to Kansas City, Colorado Springs, Mexico, Salt Lake City, Seattle, and visiting Yellowstone Park and other places of interest.

William Walker is busy putting in concrete borders for his mum plants and getting the place in shape generally.

Adam Heitz has all of his mum stock planted and it is looking fine.

J. E. Marrett reports business good.

Aug. R. Baumer had quite a lot of work for the commencements.

At C. B. Thompson's store they were kept busy all the week, working until 9 o'clock Monday night, getting out flowers for the Girls' High School commencement.

F. Walker & Co. are preparing to move into their new quarters, which will be ready July 1. They have been advertising a removal sale for the last week.

K. R.

Of all the window displays put in for Shrine week, none was more elaborate or effective than the Egyptian scene in the window of Jacob Schulz, on Fourth avenue. The entire window was devoted to a miniature reproduction of the sphinx, the pyramids and the surrounding Nile country. A stream, stocked with goldfish, wound its way through the valley, over which caravans of nobles were shown crossing foot bridges. Mr. Schulz was highly complimented on the window.

Greenhouse Heating.

CAPACITY OF BOILER.

I have a No. 19 Hitchings hot water boiler and am heating three houses 18x75 feet, one for roses, one for carnations and one for bedding plants. I would like to know if my boiler is large enough to heat one more house for carnations 18x80 feet by running one of the old houses at a low temperature for violets. It is Kentucky climate.

J. C.

Your No. 19 Hitchings boiler I think will carry the new house 18x80, but it will have to be worked pretty hard and thus will require more coal and attention than before. I would advise putting in another boiler of like capacity as the one you now have, so your heating capacity will be large enough to take two or three more houses in the future. You will only have to run the second boiler in extremely cold weather and it will not take any more coal. Two slow running fires do not use as much as one pushed hard.

G. T. E.

PIPING FOR STEAM.

Will you kindly ask your heating expert to describe the proper way to install the piping for steam, to be run under the benches? Also the best place to locate the globe and check valves and also the necessary fittings to allow for expansion? State whether horizontal or vertical check valves are most suitable.

B. H. I.

Put the boiler down as low as you can and run the mains and returns underground. Cut the system into sections of 200 feet. Put in a cross main at each section. Run the tees level out of the cross main just under the edges of each bench. Put in a space nipple, then the gate valve, then another space nipple and elbow riser out of ell to long-length run

under bench. Put an elbow with a ¼-inch opening for an air cock on the return end. Put the globe valve in the return riser. Anchor all pipes on the main end and put in swivel joints on the return end. Elbows and nipples are the cheapest things to take up expansion with. Do not use checks; use globes.

G. T. E.

PIPING SMALL HOUSE.

I am building a small lean-to house on the east side of the residence. It is 12x26 feet. It is six feet to the eaves and eleven feet to the ridge. It runs north and south. Both ends and three feet of the side wall are glass. I am going to heat it from the hot water heater that heats the dwelling. I want enough radiation to be able to keep it at 60 degrees during our coldest weather, which runs 10 degrees below zero. How much radiation do I need? Where shall I run the flow pipes, overhead fastened to the purlins, or under the benches, which go around the sides of the house? What size should the flow and return pipes be, and how many do I need?

L. M. D.

You should put in eight lines of 2-inch wrought iron pipes. Put these in the house in this way: Three on the outside wall, three under the bench next to the house and two under the bench on the outside. Give these pipes a pitch running from the north end to the south of about four or five inches. Bring in a 3½-inch flow at the north end as high up as possible and yet be under the bench. Run the 3½-inch return across the south end of the house as low as possible, back to the boiler in the cellar.

To the man who needs a Boiler

THE KROESCHELL BOILER

was installed to heat over six million (6,000,000) square feet of glass during the past three years.

Expressions from the men who know:

Used steam; was advised to change to your hot water boiler. Find it about half the work with your boiler. We would have no other.

STERNITCKE BROS., Park Ridge, Ill.

Have handled many greenhouse boilers of other makes, but Kroeschell beats them all. I get perfect circulation in 30 minutes. WM. OTTO, Oshkosh, Wis.

Former boiler, 16 horsepower steam; as much difference as between day and night. Your boiler does not need recommendation. Will recommend itself wherever used.

THEO F. DAMEROW, Grosse Pointe, Mich.

Your boiler, in my estimation, is the best in use today. We have two of them.

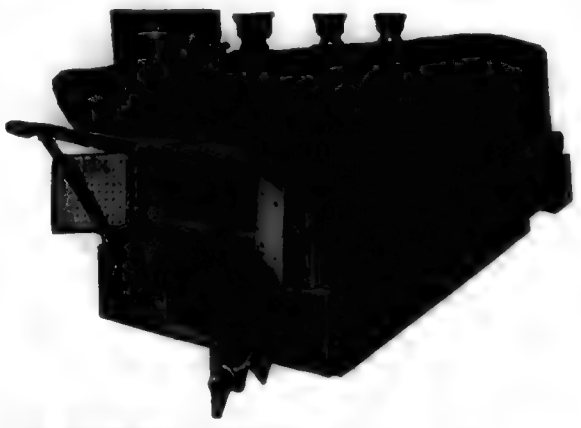
POTTER & SONS, Waukegan, Ill.

When we rebuilt our plant, we were undecided whether to use your boiler or a cast iron boiler. We are satisfied we made no mistake in using Kroeschell.

YEATMAN & WAY, Kennett Square, Pa.

Have fired greenhouse boilers since 1885, both steam and hot water. Yours suits me the best. I have two of your boilers. At one time I had two cast iron boilers working together and during a blizzard the rear section of one boiler gave out and the front section of the other sprung a crack a couple of months later. No more cast iron boilers for me. I came very close to freezing out in both instances. G. M. THOST, DeSoto, Mo.

The Kroeschell Generator



prevents boiling over, cures sluggish circulation, saves fuel, smaller mains can be used, water can be heated to 240° without boiling, increases circulation, 3 to 5 times faster; no hot water system complete without it.

HAVE YOU EVER INVESTIGATED

the one sure thing

KROESCHELL BOILERS

See the simplicity of construction. Plate material, NOT CAST IRON. Long fire travel, thin water ways. The best and the most heating surface in the world for the money.

THE KROESCHELL BOILER will give you more heat with the same piping required by other boilers, and with less fuel.

Send for our catalogue.

Kroeschell Bros. Co.

51 Erie St., CHICAGO

THE KROESCHELL BOILER

replaced 1346 cast iron boilers in 1905, 1906, 1907, and many in 1908.

Expressions from the men who know:

We are very well pleased with your boiler. I have had fourteen years' experience in heating, six with gravity steam and eight with vacuum, but give me the hot water system for all purposes. Use me for references any time.

E. LIGHTHISER & SON, Xenia, O.

Have used upright boilers, tubular boilers, and cast iron boilers. Your boiler heats up better and easier than any boiler we have ever had anything to do with. If we ever buy another boiler, it will certainly be a Kroeschell.

POOLE & PURLIANT, Washington C. H., O.

I have fired boilers both here and in Europe for the last forty years. The Kroeschell is the best type of boiler I have ever used. I have two cast iron boilers, also a locomotive boiler coupled with yours, but did not need to use the cast iron boilers this winter. Your No. 7 boiler is rated at 15,000 sq. ft. of glass and carries 25,000 sq. ft. of glass until the outside temperature goes down to 10° of frost. We have no trouble to keep temperatures in our houses with easy firing since we installed your boiler. The main flows and returns are heating our potting shed and packing room, which are not included in the amount of square feet of glass. From the boiler to the farthest end of our violet houses and return is 800 ft. and circulates very quickly.

THE SALTFORD FLOWER SHOP,
Wm. D. Saltford, Pres.
Poughkeepsie, N. Y.

The Kroeschell Piping System

is being installed by many progressive florists. 1¼, 1½ or 2-in. threaded pipe, or 4-in. tubing is used. Boiler can be set on level with greenhouse walks. You do not need deep boiler pits.

Mention The Review when you write.

Put in tees where the pipes should come and the valves on the flow end. This will give you a neat job, with no obstruction in the house. G. T. E.

TWO ATTACHED HOUSES.

I expect to build two even-span attached houses, each 32x200, one for carnations and one for lettuce. The side and end walls will be concrete three and one-half feet above ground, with twenty-four inches of glass between the top of the wall and the gutters. I expect in the future to double the length of these houses. Will you please tell me what size tubular fire-box boiler I had best put in and how I can best arrange the heating pipes for low pressure steam? Zero is about as cold as we usually get, but once in a while it goes to 15 degrees below. J. W.

A return tubular boiler of fifty-four inches diameter would be the best size for these houses. It will be over capacity now, but the future addition will take care of that. The first thing, dig a good hole in the ground, about twenty-five feet square and twenty feet deep. If you strike water, dig a good well in the bottom and put in a pump and use the water in the greenhouses. Run a 4-inch main through the middle of each house to the far end. Run a cross main out of a 2½x4x2½x4-inch cross fitting. Plug one of the 4-inch sides and you will have a tee. Put two 1¼-inch pipes on the outside wall of each house and then distribute twelve 1¼-inch pipes as evenly as convenient across the house. Put the return in the same at the other end, of 2-inch pipe; connect the two re-

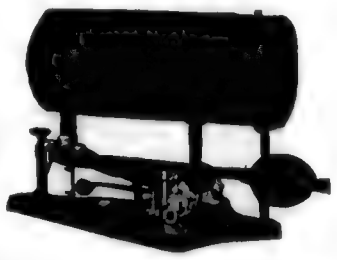
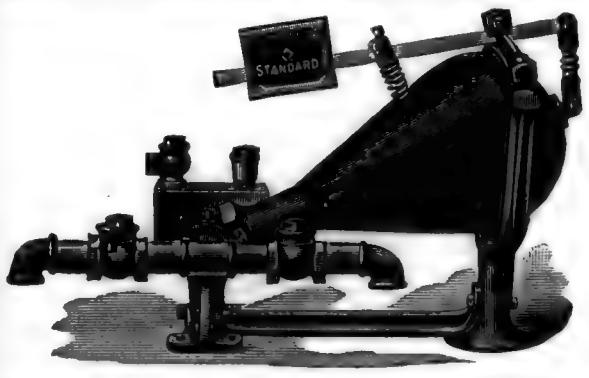
turns in the boiler-room and run into the boiler with a 3-inch pipe. Put on a vent pipe where the main return drops to the boiler. Put a valve on the vent pipe and open it when you start your boiler. This is the place for the air to escape. When steam comes out, close the vent. Anchor all pipes at the main end and put a swivel joint on the boiler end. Build your houses with a pitch of three inches to 100 feet toward the boiler; then the steam system and everything will work to the best advantage. Have plenty of head-room in the boiler house.

G. T. E.

STEAM BOILER AND PIPE.



What size boiler for steam will be required to heat 11,000 feet of glass to 54 degrees in Kansas climate? I have several thousand feet of 2-inch and 2½-inch pipe and some 3-inch. Can it be used for flows? If so, what should be the size of the returns? M. B.



A 48-inch return tubular boiler would be the best size to install for this job. It is rated about one-half over your requirements, but it is always best to have a little over, as you will be building some more houses in the future. You can use your 3-inch pipe for the mains and the 2-inch and 2½-inch for the returns. You can put in some 2-inch pipe, figuring as three 1¼-inch pipes. Do not put this as near the benches as you would 1¼-inch, as it will dry them up pretty fast.

G. T. E.

LOW'S BUSINESS CHANGE.

The firm of Hugh Low & Co., Bush Hill Park, Enfield, England, has been voluntarily dissolved and is to be conducted in future by Stuart H. Low, one of the former members, under the title of Stuart Low & Co. You may perhaps think it well to make some editorial comment on the alteration of the personnel of such an old and world-renowned firm, in which so many of your own leading gardeners have graduated. In the early part of last century it was already a power in the horticultural world, under the late Hugh Low, whose enterprise brought to notice many varieties of Mexican and Californian coniferæ, New Holland plants, Cape heaths, camellias, etc. When the reins were taken by the late Stuart Henry Low, orchids were a specialty, and no corner of the world was safe from his collectors, his brother, Sir Hugh Low, Blunt, Smith, Boxall, Tucker, Bruckmuller, Lehmann, White and Curnow all sending home large imports of what are now the main occupants of our orchid houses, and during his regime the glass at Clapton

LEXINGTON, KY.

The Market.

Plenty of stock of all kinds is coming to this market at present and business is fair. Last week quantities of roses and carnations were thrown into the trash barrel. Gladioli of excellent quality are being cut by some of the growers, and there is a fairly good demand for them. Sweet peas are not so abundant as they should be at this time of year. Snapdragon and feverfew of good quality are on the market, but they are slow sellers; the only way they are used is in making up funeral work. Lilies are good, but there is little demand for them. Indoor stock is showing the effect of the warm weather. Peonies and irises are over for this season. Green goods, such as smilax, asparagus and fern leaves, are good property at present.

The heavy rains that we have had in this section in the last few weeks have been bad for young carnation stock in the field and, if they keep up, will do considerable damage.

Various Notes.

Some fine gladioli are being cut at the J. A. Keller estate, on East Sixth street. James P. Keller finds a good demand for them at the downtown store, on Main street. This firm is preparing to plant several thousand chrysanthemums this season. Their stock, which consists of all the leading varieties, is looking well.

William Bell had a large decoration in Paris, Ky., recently.

Anderson & White are still disposing of quantities of geraniums and other bedding plants. They have some nice decorative plants and do a great deal of decorating for churches, weddings, etc.

S. S. Kelley, at Clifton Heights, has sold large quantities of bedding plants this spring and is now busy with his chrysanthemums.

Recent visitors here were J. A. Peterson, of Westwood, Cincinnati, O., and A. McMullen, the florist at Natural Bridge, Ky. Blue Grass.

Bar Harbor, Me.—O. P. McDonald, who has had thirty-five years' experience in the flower and nursery business in New York, is in charge of the Maine street store of the Mt. Desert nurseries this season, succeeding Edward Cooley, who has managed the establishment for the last nine years.

BUFFALO.

The Market.

The planting season for another year is about over, and never before has stock been so well cleaned out. Boston ferns have probably been the scarcest and are likely to be so all summer. Ferns were used for every purpose; hence the short supply. Boxwood trees were used much more this year for veranda decoration, etc. The ordinary mixed boxes are again being used, and by next year we expect to see as many used as in years back. A box of any size, aside from the ordinary filling, is too expensive for the average person.

June weddings have been taking place every day and some large jobs have been the result. These affairs, whether large or small, provide work for someone and, with graduations, have kept the store men busy for a few days. Stock is plentiful, but none too good. Sweet peas are much used for all purposes.

Various Notes.

Everybody is looking forward to vacation and some have started out already to rest up, or rather to have a good time.

A special meeting of the club was called Saturday night, June 19, to arrange for the proper care of flowers at the graduating exercises of the schools. The great trouble has been the mistakes made by the person appointed to see that each child got the proper bouquet. The club proposed to send a man to each affair and have him properly direct the flowers, thereby avoiding mistakes, which in the past have been the source of great annoyance.

Philip Scott left Buffalo Saturday night, June 19, to resume business in Denver, Col.

TARRYTOWN, N. Y.

June Flower Show.

Strawberries as large as hens' eggs, roses of all colors and sizes, hardy flowers of every description, and a special exhibit of palms, ferns and herbaceous flowers, were the attractions offered at the June exhibition of the Tarrytown Horticultural Society, held in the Young Men's Lyceum on the afternoon and evening of June 15.

Hundreds of visitors expressed themselves as delighted with the beautiful sight that greeted their eyes. This exhibition, which is one of the finest of its kind, was made possible through the interest taken in it by the wealthy women from Yonkers to Ossining.

The judges were Thomas Cockburn, of Ossining; William Cowan, of Mamaroneck, and James Dexter, of White Plains.

The F. R. Pierson Co. received a certificate of merit for display of palms, ferns and herbaceous flowers; also a certificate of merit for a vase of America gladiolus, which was one of the most beautiful exhibits of the show.

Scott Bros., of Elmsford, received honorable mention for their display of peonies.

One of the greatest attractions, and the class that was hardest to judge, was Class 23. The exhibit was the work of school children, and so well had each contestant arranged his or her exhibit that judges were puzzled as to what school children should get prizes.

Great interest was taken in Class 8, which was for J. H. Troy's silver cup for the best collection of outdoor roses. The winner must get first two years before he can own the cup.

Two of the women who won most of the prizes were Miss Blanche Potter, of Ossining (George Wittlinger gardener), and Mrs. J. B. Trevor, of Yonkers (H. Nichols gardener). Mrs. F. A. Constable, of Mamaroneck (J. Stuart gardener), also won many prizes. Among the other prize winners in the private classes were the following: Mrs. Henry Siegel, T. Aitchison gardener; Joseph Eastman, Robert Angus gardener; Mrs. Isaac N. Seligman, John Brunger gardener; Rev. A. F. Mabon; R. Livingston; Gen. E. A. McAlpin, John Woodcock gardener; Alfred L. Squires; E. H. Weatherbee, F. Milne gardener; Mrs. Max E. Sands, Thomas Lee gardener; Richard Meany; Dr. Carroll Dunham, Alex. Maitland gardener.

Springfield, Ill.—Carl Rauth has recently been advertising, in the local papers, a special sale of geraniums, on account of building operations and lack of space.

WHITE OR GREEN ENAMELED

Cemetery or Lawn Cut Flower Vases

(Peterson Patent.)

These will give perfect satisfaction to your customers.

Made in two sizes, at the following prices:

No. 1.....$15.00 per 100; $2.00 per doz. Less 10 per cent
No. 2..... 12.00 per 100; 1.60 per doz. Less 10 per cent

Let us send you a trial order and convince you of their superiority. We are sole owners of patent.

Carried by all the leading florists' supply houses in the country.

BULBS

Cold Storage Bulbs for immediate or future delivery.

			Per Case
Magnificum,	7/9	200 to case	$10.50
	8/9	200 "	11.25

Magnificum is an improvement over Rubrum.

Mum Cuttings

of all the leading commercial varieties.

Wm. F. Kasting Co., 383-387 Ellicott St., Buffalo, N. Y.

The E. G. Hill Co., Richmond, Ind.

Wholesale Florists

The E. G. Hill Co., Richmond, Ind.

Special on Fertilizers

Good only if you mention that you saw it in The Review.

BONE MEAL, fresh, pure, for rose growers, etc. Bag, 200 lbs., $3.25; 5 bags (1000 lbs.), $14.00; ton lots, $26.00.

SHEEP MANURE, pulverized. In 100 lb. bags, bag, $1.15; 500 lbs., $4.75; 1000 lbs., $8.00; ton, $15.00.

SHREDDED CATTLE MANURE, NITRATE OF SODA and other fertilizers at corresponding low prices this week.

THE W. W. BARNARD CO., SEEDSMEN, 161-163 Kinzie St., CHICAGO

THE RETAIL FLORIST.....

BOHANNON'S HOME.

One of Chicago's notable new buildings is that of the University Club, at the corner of Michigan avenue and Monroe street. It is said to be the finest clubhouse in America. In erecting the ornate architectural pile, provision was made for the housing of a florist as one of the necessary features of such an institution. L. R. Bohannon secured this desirable location for the Bohannon Floral Co. The accompanying illustration shows his portion of the front. Mr. Bohannon says that since moving to the clubhouse the character of his trade has undergone a notable change. While he has lost a large part of his transient trade, he has enjoyed a great gain in high class patronage, not only from the members of the University Club, but from the better class of flower buyers throughout the city.

DECORATE STEAMERS.

For the third successive season W. J. Palmer & Son, Buffalo, N. Y., have received the contract to decorate the steamers of the Northern Steamship Co., plying between Buffalo, Chicago and Duluth. These are the steamers, Northland and Northwest, the finest on the lakes.

DIFFICULTIES IN DESIGN WORK.

Need of a Good Background.

As a result of the craze for exaggerated size in design work, a number of mechanical defects are to be seen almost any day. Not that they all appear in the same piece, but even one is glaring enough to mar an otherwise good design. Toothpicks and sphagnum are not meant to beautify, so they should be packed in and driven far out of sight. As was suggested in a former chapter, if the side or top decoration were extended there would be little difficulty of this kind. If enough time and material are taken to prepare the background properly, less flowers and time will be required to complete the decoration. If the piece must be large for the money, wire the stems their full length, unless that should be out of reason, and cluster the flowers, leaving one portion or several spots of the background exposed. The general effect will be even better than if the attempt were made to spread a limited amount of flowers over too large a surface.

A Fundamental Principle.

One of the cardinal principles in designing is to arrange the grouping in such a way that it will have the appearance of all the lines (stems) coming from a common source. Sometimes it is difficult to keep to this excellent rule in decorating a rather small piece. The space must be "filled up"; that is the habit we have gotten into. Here, again, the remedy is with the background. Make it even and solid, to outline the design properly, and a cluster or a series of clusters will be all that is necessary to complete the design. When green is plentiful, it adds much to the effect if the background can be made thick with several layers of green. Asparagus will do nicely for this. Soft spring and summer flowers, such as pansies, alyssum, candytuft, garden heliotriope, etc., serve well for this purpose. What could be more attractive than a wreath of purple or dark blue pansies over which is trained a spray of pink roses, or a bronze and yellow shaded pansy wreath with yellow or white roses?

Good Use for Split Carnations.

Split carnations are fine for solid background pieces; they cover much more space than perfect flowers. For a pillow which it is desired to make extra large, run a solid panel of carnations—from four to a dozen flowers wide, according to the size of the pillow—from left to right diagonally upward, including the extreme corners. Over the remaining corners train loose clusters of another flower, merging the loose portions into the solid with fine green. Fringe the entire edge of the piece with choice green in a flaring arrangement. Thus executed, the piece has a decided outline and can be recognized as a pillow at the first glance.

Though long-stemmed enough to show good individual qualities, these same flowers are often too crowded on the design to show the stems. The view of the stems, foliage and sides of the flowers is just as valuable as a full-faced front. Its own foliage is the most valuable setting that it is possible to give a flower, and if additional foliage is desired it should be selected with a view to its resemblance to the foliage belonging to the flower. Customers can be trained to appreciate this fact and can see the unreasonableness of always calling for extra green.

Estimating the Price.

Another problem which confronts one is estimating quickly what amount of stock can be afforded for a design for a stated price, either before a purchase or in planning and laying out stock for a design or spray. With a little experience, one can soon be able to set a price on sight, or be able to set a size for a certain price.

At the same time, there can be no standard price for a certain size of design. The season of the year and the supply of flowers, the quality of stock, the kind of flowers it is proposed to use—all these things must either influence or fix the price. Take, for example, a 12-inch wreath. It can be filled profitably for $5, or it can be filled for $10 or over, according to the kind of flowers used. With everyday, average stock of odds and ends, it can be kept within a range of $5 to $7. A little ranging of prices, with explanations attached, will serve to cultivate a taste in the purchaser for the better class of flowers and better arrangements. If carnations, a few roses and some of the commoner flowers are to be used, he can buy the piece for $5, but when he comes to think of violets, valley, etc., he should be able to see value to the amount of $10 and over, and if he is ambitious for something still rarer, he is prepared to see the price soar.

Then, in estimating what is needed for decorating a piece for a fixed price, allow a reasonable amount for the time which will be needed to finish the piece. There are also the frame, green, moss, wire and all other supplies to be drawn on. Count out the stock, at retail price, which can be afforded for the remainder of the money, together with the ribbon or chiffon. Many people use not only more stock than the price justifies, but more than good taste admits.

New Qua ters of Bohannon Floral Co , In University Club, Chicago.

As was advised in spray work, wire all weak stems, keeping them in their natural position in the piece, and let all fall in line with the one scheme of the design. Gertrude Blair.

TAFT'S HOME IN WINDOW.

The window display in the store of Thomas F. Galvin, Boston, has been attracting more than the ordinary attention. It is an exact reproduction of the summer home and grounds occupied by President Taft, at Beverly Farms, Mass., and was installed by W. W. Rawson & Co., under the direction of Maurice Fuld. The accompanying illustration is from a photograph made through the glass. While there is some reflection, the picture is sharp enough to show some of the detail. The window has been the center of a throng ever since it was completed.

POPULAR PRICES PAY.

The Fleischman Floral Co., at its store in the Railway Exchange building, Chicago, never carries white roses in stock. Although the Fleischman business is among the largest in Chicago, this store probably sells as few white flowers as any store in the city; its work is for the live ones.

Bridesmaid is not carried in stock, Killarney having been found the only pink rose that is needed. At present no Richmond are carried, because the trade does not call for it in summer. "It looks too hot," said George Wienhoeber.

In the last few weeks the bulk of the business has been done with Beauties, which have been so abundant that the best stock could be bought in quantity at a price which gives more than the usual percentage of profit. The Fleischman class of trade knows nothing of flower markets, but is a keen judge of quality. Therefore, when good Beauties can be shown in quantity, they are salable at usual prices without regard to the depressed state of the wholesale market. The store always carries 200 to 300 long Beauties in stock, whether the wholesale price is $2 per dozen or $6 per dozen.

For the last two or three years the Fleischman policy has been one of popular prices; the charges are less than they were at the time of starting the Railway Exchange store and they are kept at a level no higher than is charged by any really first-class flower store. Mr. Wienhoeber says that while the class of trade handled does not consider price except as secondary to quality, the buyers are quick to note that they are not being overcharged; that confidence in the store has resulted, with the further result that the business has more than doubled within three seasons.

THE PILLOW.

After mossing the frame, the average maker of a pillow stems carnations and sets them in solidly all over the design, then adding his trimming. Albert C. Rott, at Joliet, Ill., covers his mossed frame with green, then puts on a plateau diagonally across the center of the design to carry the lettering, and makes up the rest of his pillow loosely, so that each flower stands out and shows its individuality. Less stock is required than to make the pillow by the formal method, but better flowers are required. In the accompanying illustration Bride roses and mignonette, with a few sprays of valley and some Easter lilies, were used.

Taft's Summer Home in a Boston Florist's Window.

DECORATING VEHICLES.

Will you kindly tell me how to decorate my one-horse driving turnout for a floral parade? I want to know the kind and color of flowers to use. In decorating the wheels, should I keep to one color of flower? Could immortelles be used on the harness? I would like to hear from some one who has had experience. This parade is to take place July 5. H. M.

Your question is one which may be answered in a few words or by going into details, drawn into a long story.

In the first place, when decorating a buggy, auto, wagon or any other vehicle, unless you decide on some certain scheme and work along those lines, the chances are your rig will not make much of a hit.

Not knowing the style of your vehicle or the color, it is rather hard to suggest a decoration for it. The sum of money you wish to spend must also be taken into consideration. Being a florist, naturally you will want to use real flowers, but my advice would be to use mostly paper flowers. They are more easily fastened and are not apt to wither, unless you happen to get caught in a shower.

The parade being on the Fourth, it might be well to have in mind some historical event or object upon which to base your decoration. The Liberty bell, American eagle, Uncle Sam, stars and stripes, etc., furnish much material.

No doubt the red, white and blue will be the predominating colors in this particular parade; still, if used tastefully your outfit will attract just as much attention as if some other colors were used.

You speak of using immortelles. This is not advisable, as these are quite expensive when used in the quantities you will require, are stiff and not of the desirable shades.

Cover the whole or parts of the harness with red, white and blue flowers, tying them on just as if you were making a garland. You might fasten part of a hoop to the saddle, cover the hoop prettily and suspend a bell or a number of small bells from the arch.

If you wish to cover the wheels entirely, then stretch a piece of light wire netting over the whole wheel and to this fasten flowers. By just tying the flowers to the spokes you can also produce a pretty effect.

The body can be decorated in a dozen ways. A pretty but inexpensive idea is to arrange arches of heavy wire crossing at the top. Where these arches cross suspend a bell of flowers, in this case one on the shape of the Liberty bell, perhaps bearing the dates of the war, etc. These arches must, of course, be nicely decorated or wound with garlands. By all means have the occupants of the buggy dressed to correspond with the decorations. H. S.

OUTDOOR CUT FLOWERS.

Gypsophila Paniculata.

The well known baby's breath, Gypsophila paniculata, is one of the most useful of hardy herbaceous summer flowers for bouquet and design work. It is of easy propagation, and every florist who grows the stock he retails should have a row of it. Stock can be had either by root division or from seed. Sow the latter at once, and transplant to the open ground during damp, cloudy weather, and they will still make nice plants before fall. There is a double form, G. paniculata flore pleno, not so well known as the old single form, which is even better than the latter commercially, and as it is now procurable at a comparatively cheap rate, it will pay florists to get hold of a few of them. The double form cannot be raised from seed, but can be increased by root division.

Introducing Individuality In a Conventional Design.

These gypsophilas are suitable for forcing, and, brought into bloom in a carnation temperature during April and May, are useful. Plants for this purpose can be placed in pots or boxes in late fall, and started after they have been well frozen.

Pyrethrums.

During the month of June, the single forms of Pyrethrum roseum are extremely useful. In the northerly states these do not open for Memorial day, but where they will flower by that date they are a particularly desirable hardy plant to grow. Anyone desiring to work up a good batch of these should procure seed at once and sow in shallow drills, either in a coldframe or under cheesecloth. The seedlings will appear in a week or ten days, and can be transplanted into nursery rows when of sufficient size to be conveniently handled. These will make strong plants before winter, and will render a good account of themselves next season.

Pyrethrums, if transplanted in fall, are liable to winter kill, unless moved by the early part of September. Spring planting is the safest, and any dividing of the clumps should be done at that time. A number of named varieties are catalogued by Europen specialists, but such a wide range of colors can be had from a packet of seeds that this is much the simplest and least expensive method of propagation. In Europe double forms are popular. A small percentage of these will come from seed, but the single flowers are to be preferred for bouquet and vase work.

In planting pyrethrums, choose a piece of ground with a little slope. On dead level land they are liable to rot in winter. A light coating of leaves or straw, applied when the ground has become hard frozen, is the only protection required.

THE COBWEB PLANT.

The little cacti have been excellent sellers in flower stores and W. H. Ritter, of Philadelphia, reports that Sempervivum arachnoideum is proving also a taking novelty in 1-inch pots. The plant is popularly known as the cobweb, or spider-web, houseleek, from the fact that the rosette-like growths of pale green are connected tip to tip by long, soft, white hairs. If grown in the sun Mr. Ritter has found the plants never lose the "web," which he says is a protection from the sun in the dry season, when the plant closes up tight and looks like a small ball of cotton. The commercial stock ordinarily is a single head. The growth is made in the spring, when the little pot will contain a cluster of the rosette-like heads.

A VENTILATION WRINKLE.

Emil Kroll, a rose grower for the Chicago market, has adopted a novel idea for ventilation. His houses run east and west and he formerly had ventilators only on the north side, hinged to the header. The result was that when his ventilators were open in warm weather and there was the frequent strong south wind, it caught the top of his ventilators and was carried down into the houses. When he hinged his ventilators at the ridge, he did not get the free circulation of air that is required. One of his neighbors, George Damm, conceived the idea of so attaching the ventilators that they could be raised straight up, being kept parallel with the slope of the roof, and Mr. Kroll, after experimenting with this style of attachment, has now so equipped his ventilators on eight houses.

He uses a long, double-action hinge, attached to the ridge and to the lower edge of the ventilator, putting three hinges on each ventilator sash. There are two lines of ventilating machines, one of which raises the upper edge of the line of ventilator sashes, the other machine raising the lower edge. By working one of these machines he can open his sashes at the top, and then by operating the other machine he can raise the lower edge, so that he can place his line of ventilating sash any number of inches, from a mere crack to eighteen inches, from the glass in the roof. The sashes are at all times directly above the openings they are intended to close and a strong south wind will blow right through under the sashes, without creating any undesirable draft in the houses. The sashes do not even have to be closed during rain, unless it is blowing.

Mr. Kroll has eight houses of the Dietsch short roof pattern. Six of them are 15x175, one 15x120 and one 12x120. His crops are Killarney, Richmond, Maid and Bride.

ALTOONA, PA.—W. T. Shields will engage in the greenhouse business at 2402 Fourteenth avenue.

KANKAKEE, ILL.—It has been locally reported that Faber Bros. are planning to remove their greenhouses from the location at Merchants and Washington streets, but on the contrary they are rebuilding some of the houses there.

As was advised in spray work, wire all weak stems, keeping them in their natural position in the piece, and let all fall in line with the one scheme of the design. GERTRUDE BLAIR.

TAFT'S HOME IN WINDOW.

The window display in the store of Thomas F. Galvin, Boston, has been attracting more than the ordinary attention. It is an exact reproduction of the summer home and grounds occupied by President Taft, at Beverly Farms, Mass., and was installed by W. W. Rawson & Co., under the direction of Maurice Fuld. Cover the whole or parts of the harness with red, white and blue flowers, tying them on just as if you were making a garland. You might fasten part of a hoop to the saddle, cover the hoop prettily and suspend a bell or a number of small bells from the arch.

If you wish to cover the wheels entirely, then stretch a piece of light wire netting over the whole wheel and to this fasten flowers. By just tying the flowers to the spokes you can also produce a pretty effect.

The body can be decorated in a dozen ways. A pretty but inexpensive idea is to arrange arches of heavy wire crossing at the top. Where these arches cross suspend a bell of flowers, in this case one on the shape of the Liberty bell, perhaps bearing the dates of the war, etc. These arches must, of course, be nicely decorated or wound with garlands. By all means have the occupants of the buggy dressed to correspond with the decorations. H. S.

OUTDOOR CUT FLOWERS.

Gypsophila Paniculata.

The well known baby's breath, Gypsophila paniculata, is one of the most useful of hardy herbaceous summer flowers for bouquet and design work. It is of easy propagation, and every florist who grows the stock he retails should have a row of it. Stock can be had either by root division or from seed. Sow the latter at once, and transplant to the open ground during damp, cloudy weather, and they will still make nice plants before fall. There is a double form, G. paniculata flore pleno, not so well known as the old single form, which is even better than the latter commercially, and as it is now procurable at a comparatively cheap rate, it will pay florists to get hold of a few of them. The double form cannot be raised from seed, but can be increased by root division.

Introducing Individuality In a Conventional Design.

These gypsophilas are suitable for forcing, and, brought into bloom in a carnation temperature during April and May, are useful. Plants for this purpose can be placed in pots or boxes in late fall, and started after they have been well frozen.

Pyrethrums.

During the month of June, the single forms of Pyrethrum roseum are extremely useful. In the northerly states these do not open for Memorial day, but where they will flower by that date they are a particularly desirable hardy plant to grow. Anyone desiring to work up a good batch of these should procure seed at once and sow in shallow drills, either in a coldframe or under cheesecloth. The seedlings will appear in a week or ten days, and can be transplanted into nursery rows when of sufficient size to be conveniently handled. These will make strong plants before winter, and will render a good account of themselves next season.

Pyrethrums, if transplanted in fall, are liable to winter kill, unless moved by the early part of September. Spring planting is the safest, and any dividing of the clumps should be done at that time. A number of named varieties are catalogued by European specialists, but such a wide range of colors can be had from a packet of seeds that this is much the simplest and least expensive method of propagation. In Europe double forms are popular. A small percentage of these will come from seed, but the single flowers are to be preferred for bouquet and vase work.

In planting pyrethrums, choose a piece of ground with a little slope. On dead level land they are liable to rot in winter. A light coating of leaves or straw, applied when the ground has become hard frozen, is the only protection required.

THE COBWEB PLANT.

The little cacti have been excellent sellers in flower stores and W. H. Ritter, of Philadelphia, reports that Sempervivum arachnoideum is proving also a taking novelty in 1-inch pots. The plant is popularly known as the cobweb, or spider-web, houseleek, from the fact that the rosette-like growths of pale green are connected tip to tip by long, soft, white hairs. If grown in the sun Mr. Ritter has found the plants never lose the "web," which he says is a protection from the sun in the dry season, when the plant closes up tight and looks like a small ball of cotton. The commercial stock ordinarily is a single head. The growth is made in the spring, when the little pot will contain a cluster of the rosette-like heads.

A VENTILATION WRINKLE.

Emil Kroll, a rose grower for the Chicago market, has adopted a novel idea for ventilation. His houses run east and west and he formerly had ventilators only on the north side, hinged to the header. The result was that when his ventilators were open in warm weather and there was the frequent strong south wind, it caught the top of his ventilators and was carried down into the houses. When he hinged his ventilators at the ridge, he did not get the free circulation of air that is required. One of his neighbors, George Damm, conceived the idea of so attaching the ventilators that they could be raised straight up, being kept parallel with the slope of the roof, and Mr. Kroll, after experimenting with this style of attachment, has now so equipped his ventilators on eight houses.

He uses a long, double-action hinge, attached to the ridge and to the lower edge of the ventilator, putting three hinges on each ventilator sash. There are two lines of ventilating machines, one of which raises the upper edge of the line of ventilator sashes, the other machine raising the lower edge. By working one of these machines he can open his sashes at the top, and then by operating the other machine he can raise the lower edge, so that he can place his line of ventilating sash any number of inches, from a mere crack to eighteen inches, from the glass in the roof. The sashes are at all times directly above the openings they are intended to close and a strong south wind will blow right through under the sashes, without creating any undesirable draft in the houses. The sashes do not even have to be closed during rain, unless it is blowing.

Mr. Kroll has eight houses of the Dietsch short roof pattern. Six of them are 15x175, one 15x120 and one 12x120. His crops are Killarney, Richmond, Maid and Bride.

ALTOONA, PA.—W. T. Shields will engage in the greenhouse business at 2402 Fourteenth avenue.

KANKAKEE, ILL.—It has been locally reported that Faber Bros. are planning to remove their greenhouses from the location at Merchants and Washington streets, but on the contrary they are rebuilding some of the houses there.

Growing Easter Lily Bulbs at Santa Ana, Cal.

COSMOS LADY LENOX.

The only trouble with any variety of cosmos seems to have been that it only began to be of use when, by nature of its constitution, it had to succumb to frost. Many regretted that cosmos could not have a longer season, even before that most beautiful variety, Lady Lenox, was introduced, and certainly they have regretted it much more since then.

Last fall I saw hundreds of plants of this variety on one place in full bloom when all others in the neighborhood had long since been things of the past. This was made possible by the erection of a framework of slats all around the plants, and the framework was covered with burlap every evening, when indications pointed to a frost. Not only were the plants worth this labor for the flowers for cutting, but also for the gorgeous show they made while growing.

D. M.

FREESIAS.

I want to plant freesias to use as cut flowers for as long a season as possible this winter. When should they be planted and how should they be treated after planting? How late can the bulbs be planted to give good results?

L. M. D.

The earliest freesias usually arrive about the middle of July. The bulbs can be potted or placed in flats at once. Many successful growers plant in 10-inch and 12-inch pans, standing these on shelves in carnation houses. A rather sandy soil suits them. One containing one-fourth rotted cow manure to three-fourths fibrous loam will grow excellent freesias. After the bulbs are placed in the soil, stand the pots, pans or flats in a coldframe, water well and cover with dry moss or leaves, removing the covering as the growths appear. The floor of a light cellar is a good place to start the bulbs.

A flat thirty inches long, twelve inches wide and four inches deep will hold seventy-five to 100 bulbs, according to their strength.

Freesias can be planted in successional batches until October, at intervals of three weeks. The earlier planted ones usually, however, produce the finest spikes. To have them in flower at Christmas or New Year, place the first batch on a shelf in a house kept at 52 to 55 degrees at night about the end of September. Later batches can be held in coldframes until November, or even later, if carefully protected. C. W.

CALIFORNIA LILY BULBS.

Another Infant Industry.

I was much interested in A. F. Amling's account, in the Review of June 3, page 9, of his experience in growing the lily bulbs he obtained from California. I am in doubt as to whether he thinks his poor results were caused by insects, disease or merely poor quality of strain, as might result from mixed seedlings.

I flowered some 10,000 or more seedlings outdoors this year, here at Santa Ana, Cal., and I have all types imaginable, in size, shape and substance of flowers; in color of stem and in leafage, as well as in general vigor. I note but little, if any, of the so-called lily disease, but I have had serious trouble with an insect pest, a mite that attacks the root and bulb. I am inclined to think that a part at least, and perhaps a great part, of Mr. Amling's trouble was caused by this minute insect, which burrows in the tissue of the scales of the bulb and causes more or less decay. I reported this insect to the Department of Agriculture about a year and a half ago, and through G. W. Oliver, of the Bureau of Plant Industry, I learned that Mr. Banks of the Bureau of Entomology gave the name of it as Rhizoglyphus rizophagus and that it had been reported as attacking onions in this state. I find it occasionally in decayed portions of bulbs of other plants, but I think that in them it only follows up attacks of disease, while on lily bulbs it is decidedly the aggressor, attacking the new, healthy tissue freely and soon reaching the heart of the bulb.

Having no freezing weather here, soil once infested by these pests seems to be continuously occupied by them. Where they come from I can only guess, but think they are brought in by stable manure. Upon land where no bulbs or roots have previously been grown and where no stable manure has been applied, I have no doubt healthy bulbs can be grown, provided the seedlings have been raised in clean soil in the seed beds.

Methods of Culture.

The seed ripens about September 1 and is sown immediately in beds of proper soil, under the partial shade of a lath frame or of canvas. They usually germinate freely in three to six weeks. With favorable weather and good care, they are ready to transplant in March or April to the field. An acre of ground will accommodate 40,000 to 50,000. Considerable care in watering and cultivating is necessary to prevent the small plants from becoming dormant during the summer months, as it is their nature to do. Therein lies the secret of getting a large bulb in a short time.

With continuous growth they all flower freely in May and June, twenty months or thereabouts from the time of sowing the seed, and the bulbs are then

Growing Easter Lily Bulbs at Santa Ana, Cal.

ripened and are ready to dig late in August.

A few of the stronger seedlings have flowered for me in the fall, ten to fourteen months from the time the seed was sown. Several have had as many as nine flowers. These bulbs all bloom again at the regular time in the following spring.

Many of the hybrid seedlings show extreme vigor, throwing stout, well clothed stems and bearing fifteen to twenty-five flowers—exceptional ones as many as thirty and forty. This, remember, is in the first time of blooming, twenty months from seed.

The industry is decidedly in its infancy yet and may take a number of years to get a good start, but I have much faith in its final success. Much work needs to be done first, however, in selecting and fixing a proper strain, and this takes time.

I enclose, for reproduction in the REVIEW, two photographs of a small patch containing 3,000 or 4,000 bulbs. A great many had been cut and sold for the blossoms before the second picture was taken. They were raised from seed sent to me by Mr. Oliver, of the Bureau of Plant Industry, and are the result of crossing Lilium Harrisii and L. giganteum. I have growing this year some nice young plants from seed which Mr. Oliver sent me last fall, a cross between L. giganteum and L. multiflorum. From the evenness of growth I have hopes they may be more uniform in type, but I shall be unable to tell much about that until they bloom next May.

The Santa Ana Easter Lily Co., near here, is transplanting many thousands of strong seedlings. Several parties are interesting themselves in this work and may do something another year, but this firm is so far the only one I know growing the bulbs in commercial quantities.

FRED RAFFERTY.

GERMAN IRIS DISEASE.

I have a lot of iris which are badly diseased. A sort of rot seems to set in pretty well up the stem where the new growth is coming out, then goes down to the crown and in a short time, a couple of days or so, the whole stalk falls over, rotted off at the rhizome. Some of those having hard, stiff foliage, such as Mme. Chereau, aurea and Sans Souci, do not seem badly affected, but pallida Dalmatica and Florentina are about ruined. Last year the rot did not set in until after flowering, but this year it commenced as soon as the buds began to show, and I scarcely got any flowers from pallida Dalmatica and Florentina. I sprayed with the ammonia-copper solution, thinking it might be leaf blight at first, but this had no effect. Can you suggest a remedy? H. H. G.

Several years ago I had precisely the same trouble. In my case the rotting started in July and almost cleaned out some clumps entirely, the shoots becoming completely rotten just above the rhizome. I was unable to get any information from experimental stations or elsewhere in regard to the trouble, which, however, I find is not uncommon in Europe, as well as in America. In 1902 I feared that I would lose an entire collection from this rot. Spraying was of no avail, but instead of throwing away the living remainder they were planted in nursery rows in another part of the nursery. The next season they bloomed splendidly and did not have a trace of disease. The conclusion I have come to is that where plants are left in clumps or masses for over two seasons the disease will attack them, but if replanted every fall, or even once in two years, the trouble will practically disappear. Each year we find a few shoots rotted above the rhizome. This, however, causes us no worry, as experience has taught us that replanting is the real solution of the trouble. Pallida Dalmatica, Florentina, Mme. Chereau, flavescens, aurea and every other kind we grow are now perfectly clean in the same ground where rot was rife a few years ago. I do not believe that spraying is of any avail, once the rot starts, but replanting has with us proved a sure remedy. C. W.

HARDY YELLOW CARNATION.

Hjalmar Hartmann & Co., of Copenhagen, Denmark, some time since found an entirely distinct hardy carnation growing in the garden of a small cottager near that city, and of this they procured the stock, believing that it would prove a most valuable commercial novelty. The name Comtesse Knuth has been given it and sample plants have been sent to Henry A. Dreer, Riverton, and R. & J. Farquhar & Co., Boston. Within the last week plants also have been received by the Yokohama Nursery Co., New York, for planting out in some public garden where those interested may see them this summer.

Comtesse Knuth is bright yellow and the large, well formed clusters of flowers are carried on strong, stiff stems of good length. The flowering season is from July until November. Hartmann & Co. say the variety has proved to be "an excellent merchandise on the flower markets of Copenhagen; cut flowers of it have been in great demand and have obtained a very high price." It is perfectly hardy in that country.

MOUNT JOY, PA.—David Zerphey has had a better trade this year, both in plants and cut flowers, than ever before. He says he is experimenting in seedling carnations and now has about 300 of them.

Growing Easter Lily Bulbs at Santa Ana, Cal.

COSMOS LADY LENOX.

The only trouble with any variety of cosmos seems to have been that it only began to be of use when, by nature of its constitution, it had to succumb to frost. Many regretted that cosmos could not have a longer season, even before that most beautiful variety, Lady Lenox, was introduced, and certainly they have regretted it much more since then.

Last fall I saw hundreds of plants of this variety on one place in full bloom [illegible] long since been things of the past. This was made possible by the erection of a framework of slats all around the plants, and the framework was covered with burlap every evening, when indications pointed to a frost. I do not believe that spraying is of any avail, once the rot starts, but replanting has with us proved a sure remedy. C. W.

HARDY YELLOW CARNATION.

Hartman Hartmann & Co., of Copenhagen, Denmark, some time since forwarded us cut specimens of a hardy carnation growing in the garden of a small cottager near that city, and at this time proved the stock following that a seed grower of most extensive connections. The name Cottage Maid is a good one for it, and it is [illegible]

FUTURE OF THE PEONY

MORE FIELD NOTES.

A Careful Observer's Test.

Grandiflora Rubra—This variety has the size and is extremely double; the color is a light shade of red.

Humei Alba (Lemon)—Opens white tinged with delicate pink, fading to pure white; free.

Humei (Anderson)—Immense blooms of deep pink, late; has a weak stem for its large blooms; sold by many as Humei Carnea.

Irma (Calot)—A beautiful regularly-shaped flower; soft pink distinctly mottled with carmine.

L'Esperance (Calot)—The earliest of all the Chinensis type to bloom; pure, clear pink; never fails; some call this Edulis Superba; desirable.

L'Eclatante (Calot)—An upright grower; every flower held aloft; good size, free, sure bloomer; color rich velvety crimson; flowers double; will attract attention in any collection of peonies.

La Tulipe (Calot)—A fine, delicately tinted flower of pink and white with some carmine spots.

Livingstone (Crousse)—This is thought by many to be the best pink; of immense size; soft pink overlaid with white when fully finished; superb.

Linne (Verdier)—The strongest grower, with the largest stem of any peony; immense flower of deep pink; never fails to bloom.

Lady Derby—Who sent out this peony? It is exceptionally fine. Extra strong grower and extremely large flower; pure, pearly white; extra fine.

Mme. de Verneville (Crousse)—Our rows of this were a perfect sheet of flowers; on one 5-year-old plant were counted sixty-five perfect blooms six inches in diameter. Ball-shaped, of the purest white, with a few carmine flakes; a gem.

Mme. Forel (Crousse)—This has well been given the appellation of the princess of peonies; immense blooms of clear, intense, bright pink.

Mme. Crousse (Calot)—Certainly a grand white flower of the largest size; not as well known as it should be.

Mme. Emile Galle (Crousse)—As to color this superb creation is in a class by itself; it has the shades of La France rose with touches of heliotrope; the coloring lights up the flower as though surrounded by a halo.

Mme. Calot (Miellez)—This is known in Holland as the Glory of Boskoop; extremely free and a sure bloomer; extremely fragrant; opens with shaded, delicate pink, fading to pure white.

Mme. Bucquet (Dessert)—A fine dark rich red, but with us is too shy a bloomer.

Mme. Thouvenin (Crousse)—A large deep rose; this will supplant Lady Anna (Calot).

Mme. Ducel—As perfect in shape as a chrysanthemum, many of which it resembles; it also resembles Mons. Jules Elie in shape, but is a lighter pink in color.

Mlle. Rousseau (Crousse)—One grower is said to have remarked that this superb sort should never sell for less than $3 per plant. Young plants often show semidouble flowers; large and full; sulphur white with salmon tints and carmine spots.

Marie Lemoine (Calot)—One grower had several rows of plants under this name; when they bloomed they were Festiva Maxima; claimed to be from one of the most reliable of French growers. Marie Lemoine is a peculiar grower, throwing up strong, stiff canes with enormous buds and flowers that will startle you for their great size and substance; color, sulphur white changing to pure white, showing golden stamens inside of flower; gem of the first water.

Marie Stuart (Calot)—During the blooming season, we had an artist on the ground painting the flowers and it was his opinion that this was the most beautifully shaped and colored of all; a delicate pink with a high built deeper pink center; lovely.

Messonier (Crousse)—The gentleman who has been masquerading around under the name of Mons. Crousse is this variety. It, too, came from a reliable French house. It has just one fault; its stem is too weak to uphold the large double red bloom.

Mons. Jules Elie (Crousse)—We call this the king of peonies on account of its enormous size, fine shape and attractive coloring; mammoth globes of beautiful pink overlaid with a sheen of silver.

Modele de Perfection (Crousse)—A most attractive flower, having a marked individuality; rather late in blooming; clear pink with deeper center.

Monsieur Krelage (Crousse)—When Crousse sent out this magnificent flower he must have spilled his paint pot, for since its production no peony has been disseminated that has such a peculiar shade of red. The Hollanders describe it as currant-red, but they have another guess. The flower is large and as perfect in shape as an Adonis; each bloom stands erect in its majestic bearing; grand.

Mont Blanc—Some claim this is Alba Sulphurea (Calot). It is a grand variety; white guards with yellow center, changing to white.

Paganini (Guerin)—Another white-guarded variety with yellow center; extremely free.

President Roosevelt—It looks like the grower had seen a good thing in Dr. Boisduval and gave it a more popular selling name.

Pierre Duchartre (Crousse)—A large flower; same style and size of Living-

This is the second installment of a paper by Mr. Good, begun in the Review of June 24.—Editor's Note.

Peony Albert Crousse.

stone, but several shades lighter in color.

Queen Victoria (Eug. Hort)—Still the standby for a good, all-round, low-priced white.

Rubra Violacea (Verdier)—Blooms in immense clusters; was the freest bloomer among over 300 varieties; light pink, deeper in color than Mme. Emile Galle.

Rubra Superba (Richardson)—A fine, late, dark-colored rich red; a little shy in blooming.

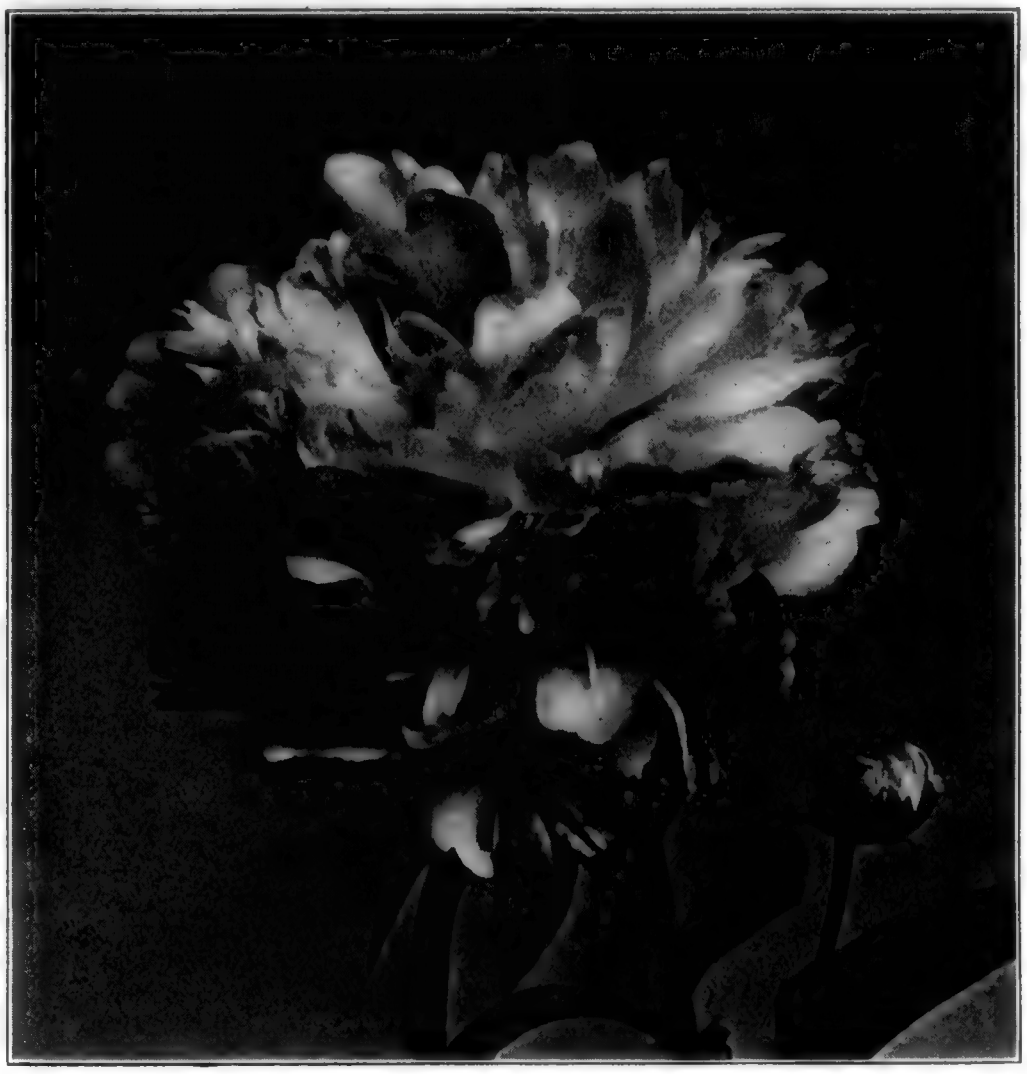
Rubra Triumphans (Delache)—A good semidouble bright red.

Thurlow's Dark Red—We can find no record of who sent this peony out, but it is a large, well-shaped, free-flowering deep red.

Solfatare (Calot)—A strong growing peony of great merit; white guards with sulphur yellow center, changing to white.

Victor Hugo (Crousse)—This is much on the style and color of Felix Crousse; a desirable sort.

Victoire Tricolore (Van Houtte)—The only one of the tricolored of this type we keep; broad guards with narrow center petalage; the color is pink and white with yellow shades.



Constant Bloomer First Factor.

A number of varieties we will discard as not worthy of a place in our collection. First of all, a peony to have worth must bloom freely every year, in addition to furnishing fine blooms. A variety that blooms but once in three years will not find lodgment with us.

No peony, however good, fills all the requirements. Take Festiva Maxima: There is nothing finer in white bloom, but follow it up with Duchesse de Nemours and Festiva, and follow them with Mme. Crousse, and again this with Marie Lemoine, and you will have good white peonies for about a month, while if you confined yourself to one variety you would have not to exceed a week of flowers.

This is true of the pinks and reds as well. Every florist should have a planting to produce flowers for home use, and the sale of roots is profitable. With a few rows planted out, every florist would secure for himself a wealth of flowers that nothing else can touch for beauty and at a time of the year when flowers are in the greatest demand, Memorial day, June weddings and commencements. By all means plant some peonies, and when you plant don't pick up the first cheap offer simply because they are low in price, but get the best and you will live happy ever after.

JOHN M. GOOD.

Peony Asa Gray.

LILY OF THE VALLEY

OUTDOOR VALLEY.

I have a large plantation of lily of the valley that has grown so thick that it does not bloom much. Please give me instructions as to the best time to reset and how far apart to set the pips and whether it is necessary to plant the whole root, as they are quite long. Also inform me as to the best soil and fertilizer.

L. C. P.

After a plantation of lily of the valley has been growing six to ten years it becomes rather too crowded and it pays to replant some portion of it every year, so that there will always be some part of it in first-class shape. The ground should be deeply dug or plowed and plenty of rotted barnyard manure worked in. Some shade is desirable, lily of the valley in a natural state always being found in the shade of woods. I do not say that it cannot be grown in full sunshine, but better results will be had by affording some shade. October is a good month to do any dividing and transplanting. Plant in straight rows. Allow four to six inches between each strong pip, or place six or eight pips together to form clumps, allowing these fifteen inches of space apart. The rows can be as near as a foot apart if the plants are to be kept in beds containing four to five rows, but if it is desired to use the cultivator among them, allow double the distance between the rows.

The roots can be shortened with advantage before being planted. If you want to secure the finest quality of lily of the valley, it will pay you to buy some imported pips, securing, if possible, Fortin's variety, which is the best for outdoor planting. This costs a little more, but the quality compensates for this. Outdoor valley should have a dressing of rotted manure each fall and care should be taken not to cut down the foliage until decayed. I have seen beds ruined by the removal of the foliage while green. C. W.

PECKY CYPRESS.

I have just received a shipment of pecky cypress that is full of cavities; not ten per cent is sound. I ordered it for a chrysanthemum bench, but it does not look to me as though it would do. I am entirely unacquainted with this kind of lumber and so send you a sample for your opinion. W. S. M.

If all the boards contained places as bad as the samples, the lumber would not be considered as especially satisfactory, but because of possible weakness and not because of decay. Probably you will find even the worst looking of the boards strong enough to hold up any weight that will come on them in your benches. That is all you need care about. The "peck" does not affect the lasting quality of the lumber. The worst sample you send will be plenty good enough for benches if strong enough to hold the weight.

Many growers on first acquaintance condemn pecky cypress on its looks, when later they learn to consider nothing more than the strength of the boards. It always is full of these holes.

READING, PA.—The building at 636 Penn street, known as the Penn Flower Shop, has been torn down, to make room for a three-story structure for store purposes.

SEASONABLE SUGGESTIONS

Gardenias.

It is time to get the young stock of gardenias planted out in the benches, in order that the plants may attain a good size before fall. After cleaning out the soil, wash the benches out well with the hose and give the boards a coat of either whitewash or crude oil. The latter is to some extent a wood preservative and those who use it have never found it in any way harmful to plant life. Thorough drainage is absolutely essential for successful gardenia culture. Many growers fail, owing to using a compost from which all the coarse material has been shaken out. It is this latter which the plants revel in. Three-fourths rough, fibrous loam and one-fourth well decayed and rather lumpy cow manure, with some coarse sand and broken charcoal, makes an ideal rooting medium and one of sufficient porosity. The water should pass quickly through a gardenia bench when applied, or a bad dose of the yellows is a certainty.

Plants from 3-inch pots are sufficiently large and if these are set in rows eighteen inches apart, with fifteen inches between the plants, they will easily cover the benches before fall. Plant firmly and leave a small hollow space around each plant for water. This is better than soaking the whole bench at each watering. The soil in the benches need not exceed five inches in depth and the coarsest compost should, of course, be placed in the bottom. Keep a moist atmosphere; spray three times a day in hot weather. Shade lightly, air freely in warm weather, close up about 4 p. m., to bottle up a brisk heat, and the plants will surprise you with their growth. Keep the shoots pinched and do not allow any flowers to be produced.

Stephanotis Floribunda.

Stephanotis floribunda, the one-time prime favorite with florists, is less grown than its merits would seem to warrant. In Europe it is one of the standard market flowers and for bouquets and funeral work is in strong demand. Flowering in spring and early summer and not being by any means a fussy subject to handle, it would pay many a country florist, especially those who have calls for choice white flowers, to grow at least one plant of this stephanotis. Although a native of Madagascar, S. floribunda does not, as is commonly supposed, require tropical treatment. As fine plants as one would care to see are grown in ordinary greenhouses, with a winter minimum of 50 degrees, flowering profusely in May and June each year.

A light house is not necessary, although the plant will stand fairly strong sunlight. Too much root space causes a rampant growth and sparsity of flowers; tubs, boxes or small prepared beds are the best. For compost, turfy loam, bone meal, sharp sand and dry cow manure, making the whole rather coarse to insure free passage of water, is ideal. Good top-dressings early each spring will carry the plants safely for a year.

In Europe specimens on balloon-shaped trellises are features at exhibitions. These are invariably run up wires or strings on the roofs and later tied around the frames. There are back walls and ends of houses, often not utilized, which would grow stephanotis well.

Scale and mealy bug are especially fond of this plant. Good pressure of cold water from the hose will easily control them.

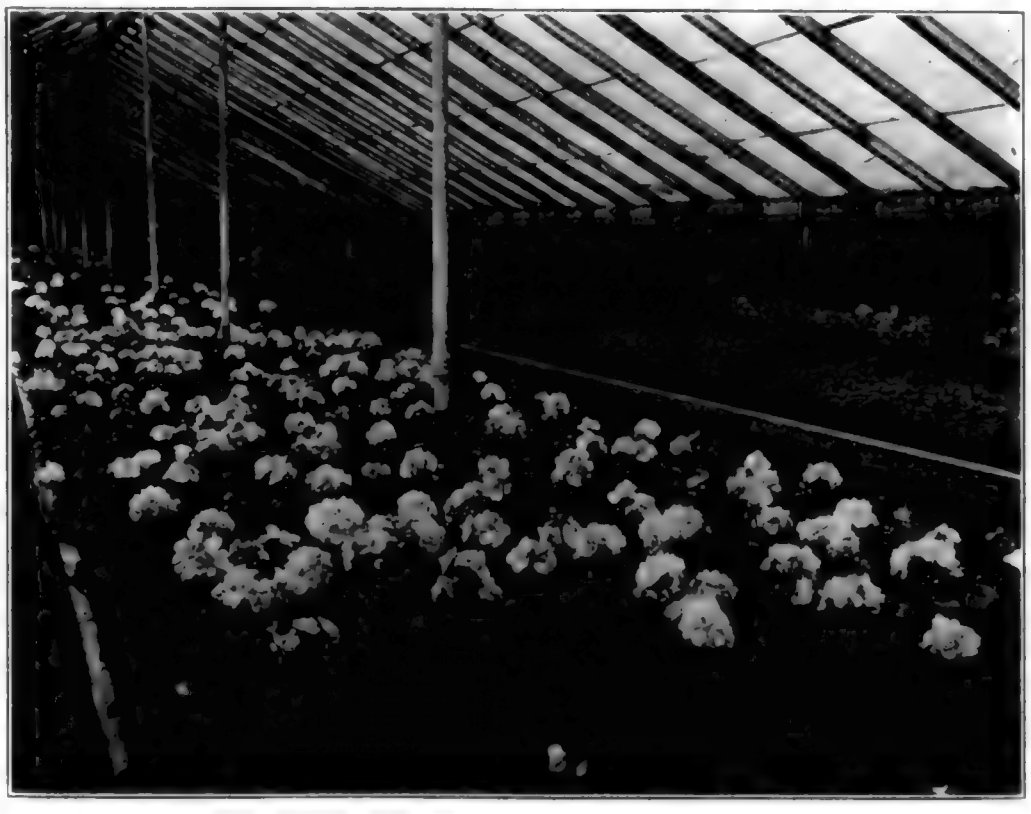
Propagation from the previous season's wood in winter in a brisk bottom heat is easy and the cuttings grow surprisingly fast if kept potted on.

Eucharis Amazonica.

Eucharis Amazonica is an extremely useful florists' plant. When properly handled, two and occasionally three crops of flowers are produced each year. As a rule, two crops can be depended upon, one in December and the other in June. The plants succeed well either in benches or fairly large pots, the latter being the better mode of culture, as the plants can be placed outdoors or in frames in summer, and can be placed in cooler quarters for a rest between crops. Pots ten to twelve inches in diameter are sufficiently large. A compost of rough, fibrous loam, broken sandstone or brick, broken charcoal and cow manure will grow eucharis to perfection. They must have a porous rooting medium, or the soil will speedily get into a sour condition.

At this season, when the plants have just finished their second crop of bloom, they should be abundantly watered, fed with liquid manure once in four or five days, syringed frequently to keep that arch enemy, mealy bug, in check and kept growing until the end of September, after which time a gradual rest is necessary to secure a good Christmas crop of flowers.

Either a bench in a light house, or a coldframe will grow eucharis finely during summer. The glass must be shaded and, if shut up with abundant moisture at 4 to 5 o'clock each afternoon, the plants will make splendid growth. With newly potted stock, water rather sparingly until the pots are well filled with roots. The main essentials of success in eucharis cultivation are: Using a coarse, porous compost; getting the pots well filled with roots before resting at all; ripening thoroughly in a cooler structure, and a brisk, moist heat while growing. Of course, to these must be added freedom from mealy bug, which a judicious use of the hose will control.



Poinsettias.

The earliest poinsettia cuttings are now well rooted in small pots and ready to be transferred to a bench, in which they are given six inches of compost, such as is used for chrysanthemums. In this they grow splendidly and will produce large bracts for Christmas. There is still ample time to get in several additional batches of cuttings during such torrid weather as a large section of the country has been sweltering under of late. Care in watering and shading are necessary, or a batch will speedily be ruined. Cheesecloth hung over the cuttings is better than whitewash. Exclude air from them as much as possible and they will root much better.

Stock plants, from which cuttings are being taken, can be planted out moderately close in a frame. No sash covering is needed. The cuttings will be shorter-jointed and stockier than if grown under glass. If possible, use cuttings rubbed off with a heel. Dip in dry sand to stop bleeding and always trim off the leaves pretty closely before placing in the propagating bench.

Winter Geraniums.

In hot weather winter geraniums are benefited by a light shade. The Bruant

House of Geranium Mrs Lawrence.

section will withstand the hottest sun with comparative impunity, but there are quite a number of French and English varieties which will scald to some extent under glass in summer. It is better to keep the plants inside, especially when the hot, muggy August days come along, as these start blight on the foliage if the plants are outdoors, and it spreads with alarming rapidity. Do not allow the plants to become starved in the pots before giving them a shift. Keep the tops pinched and remove all flower trusses.

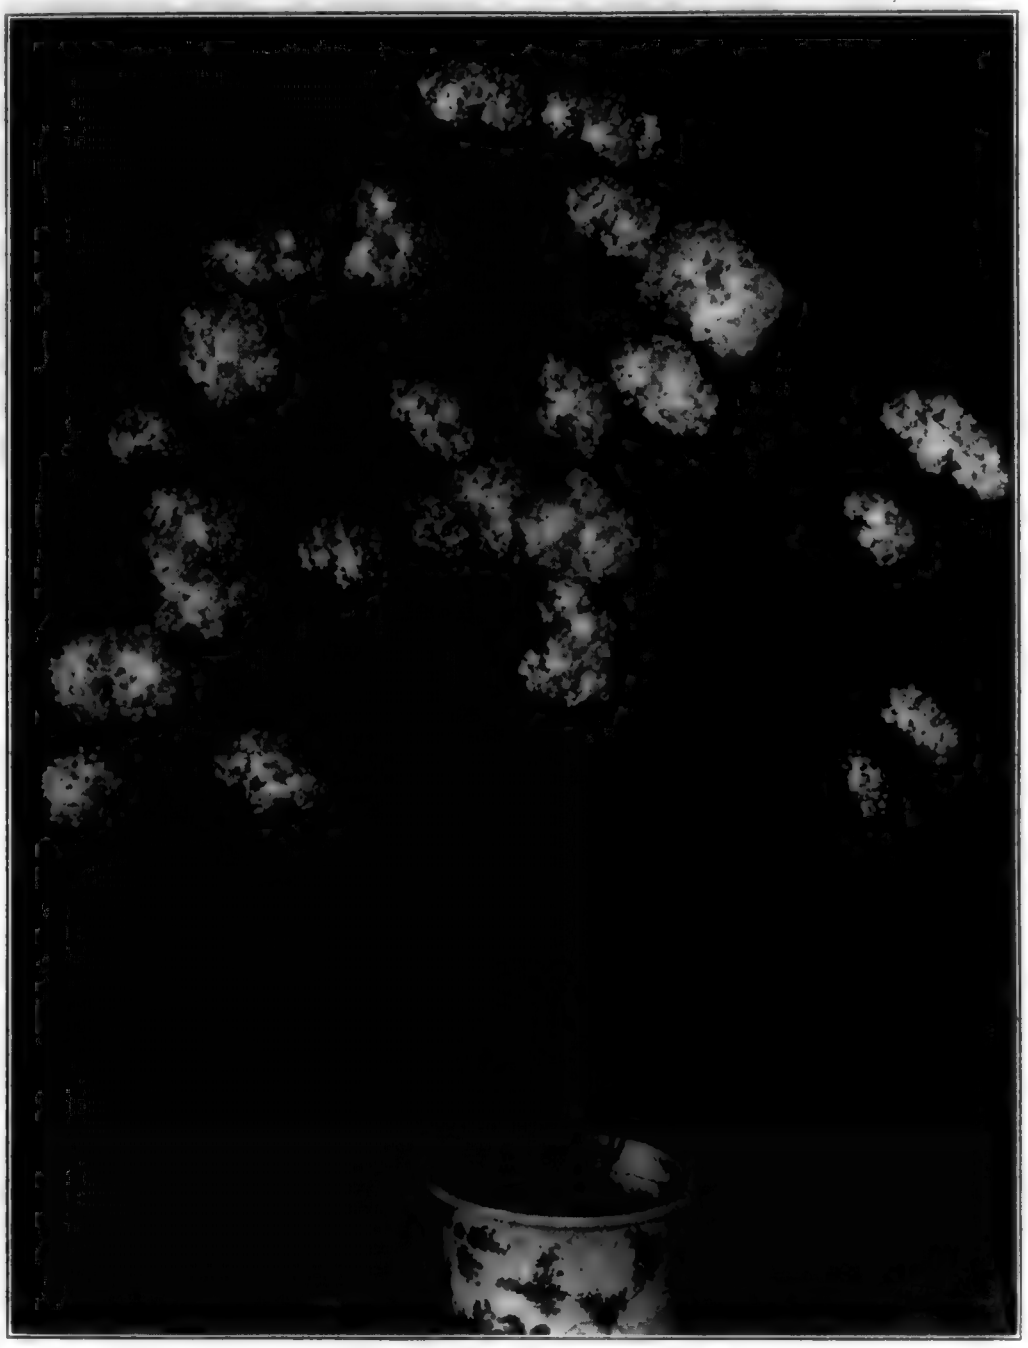
Sweet Peas.

Sweet peas now are an all-the-year-around florists' flower and the institution of a sweet pea society should do much to still further popularize them. The wealth of beautiful new varieties suitable for outdoor culture, constantly being introduced, makes it incumbent on every up-to-date grower to try one or two of the novelties each season. All of these may not be advances over existing varieties, but a steady improvement is noticeable each year. It is not possible, except in a few specially favored spots, where ideal climatic conditions prevail, to produce outdoor sweet peas at all approaching the greenhouse ones in quality. They are, however, an indispensable flower for the country florist to retail in summer and without them we would be poorly off, indeed.

The outdoor crop is now in full bloom and to keep the plants in good growing condition as long as possible should be every grower's aim. If mulching was applied as recommended some time ago, it will be found a great help to the plants. Note the difference between mulched and unmulched rows during a hot wave. Keep flowers picked off closely. Remove all seed pods and weeds coming up among the plants. If water is needed, use the sprinkler and soak thoroughly. If your plants are not mulched, stir the soil frequently between the rows to hold the moisture in the ground.

THE MRS. LAWRENCE GERANIUM

Harry J. Quick, of Baltimore, Md., is convinced by experience that the Mrs. Lawrence geranium is undoubtedly one of the best bloomers on the market. The photograph which is here reproduced shows a house of this variety which was grown by Mr. Quick for J. Bolgiano & Son. To this firm Mr. Quick has sold over 20,000 geraniums during the present season.



SPANISH IRIS.

Can you give me any information concerning the culture of Spanish iris, whether they will grow in a low, moist soil, or do they prefer a high, drained location? Also, are they a satisfactory flower for greenhouse culture? How high do they grow? J. M. B.

Spanish iris on low, moist ground will rot in winter. On well drained land, where water does not stand, they are just as hardy as tulips or narcissi and the current impression that they are not adapted for outdoor culture is utterly erroneous. We give our bulbs a light coating of leaves after the ground freezes and have never known any of the bulbs to rot or winter-kill. It is surprising that more of these splendid irises are not grown commercially. They are inexpensive and of the easiest possible culture.

For outdoor culture defer planting until just before the ground freezes. For greenhouse culture place in flats as soon as the bulbs arrive. A flat 4x12x24 will hold seventy-five to 100 bulbs. Place on the floor of a cool pit until well started. Then remove to a cool greenhouse, kept at 45 degrees at night. By starting some early and retarding others, it is easy to have a succession from March until June. The outdoor crop with us, in southeastern Massachusetts, was at its best about June 20. Some varieties, such as Chrysolora, Louise and Mont Blanc, grow eighteen to twenty-four inches high. Cajanus, a fine deep yellow, grows over three feet outdoors. All have excellent stems and they are the finest of all the iris family for cutting. As a desirable succession, plant some of the English irises, which want similar treatment. These are now, June 28, just coming into flower with us.

W. N. CRAIG.

Hydrangea Arborescens Alba Grandiflora.

ASPARAGUS SPRENGERI.

I have Asparagus Sprengeri in 6-inch and 7-inch pots, last year's seedlings. Would it be advisable to plant these, say in 10-inch wire baskets, and hang them up in the houses for cut sprays next winter, or would it be better to plant young plants that I have now in 3-inch pots? It seems a waste to throw away the large plants. E. F. H.

I would advise you to plant young plants of Asparagus Sprengeri out of 3-inch or 3½-inch pots. Set two plants in a 14-inch wire basket. This will prove more satisfactory than to plant one in a 10-inch basket. ALBERT F. AMLING.

NEW FORCING PLANT.

The European horticultural press has been printing many favorable comments on Hydrangea arborescens alba grandiflora, of which the accompanying illustration is presented. This plant was raised by H. den Ouden & Son, at Boskoop, Holland, and in the last few years they have been busy working up stock of it by pot culture in the usual Boskoop manner. They consider that the plant will prove an important acquisition for the forcing plant trade. The plant illustrated was forced by them last winter and produced fifty-four full-grown white flowers. On each branch there were eight buds, all of which produced fully developed flowers. While Hydrangea arborescens alba grandiflora is expected to prove most valuable as a pot plant for forcing, it will also be of value for garden work, as it has been found to stand the most severe winters in Holland.

THE REVIEW sends Scott's Florists' Manual postpaid for $5.

EUGENE, ORE.—W. O. Heckert is building a range of greenhouses for the Misses Ida and Harriett Patterson, two of which are completed and are being planted. The houses are to be run on a commercial scale.

SEASONABLE SUGGESTIONS

Gardenias.

It is time to get the young stock of gardenias planted out in the benches, in order that the plants may attain a good size before fall. After cleaning out the soil, wash the benches out well with the hose and give the boards a coat of either whitewash or crude oil. CARNATION NOTES.—EAST.

The Old Soil.

What to do with the soil taken from the benches when cleaning them out, is an important question with many growers, especially those whose source of soil supply is none too large. This old soil is far from worthless and can be utilized in many ways, but I wish to mention more particularly a plan whereby it can, with little trouble, be restored to its former fertility, meanwhile returning the expense of time and labor in handling.

Do not shovel it out through the side ventilators, leaving it there to catch drip from the roof, but spread it at once on a vacant piece of ground, which should, for best results, have been plowed and kept free from weeds by an occasional harrowing.

If desired, a planting of some dwarf early sweet corn could be made at once, a seeding with crimson clover being made among the corn late in July. It would be better, however, to keep clear of weeds and seed to clover only. Early next spring apply a dressing of manure and, when the clover is in full bloom, turn it under.

A Crop of Peas or Beans.

With a view to further improving the land and at the same time obtaining a revenue, some leguminous crop, such as peas or beans, can be grown. We prefer peas, as the early sorts give quick returns and can be gotten off in good season; then the land can be plowed or disked, a dressing of lime applied and another seeding of crimson clover made.

The following spring this land will be in condition to furnish good bench soil. It can be top-dressed with manure, plowed, disked and later scraped into ridges or at once made into a long, flat pile, intermixing it with manure.

Remember that crimson clover is not absolutely hardy under all conditions, but, even should it winter kill, the land has been benefited. Do not sow it too early, for if it blossoms the same year sown, not a plant will be found the following spring. Arrange to keep the soil free from standing water during the winter and, above all, purchase reliable seed.

Geo. S. Osborn.

ENGLISH GROWER'S NOTES.

American Novelties in Britain.

It is always interesting to the raiser of carnation novelties to know just how his creations make out in other countries and what the foreigner thinks of them, and it is perfectly safe for the critic to write the candid truth while the rolling Atlantic separates him from the originators of the flowers.

We in England would be most ungrateful if we belittled the more recent introductions without at the same time expressing our appreciation of the several most excellent novelties which have previously been disseminated, and to whose raisers we owe so deep a sense of gratitude.

Taking the more important 1908 novelties alphabetically, we commence with Afterglow. As yet no grower over here exactly knows his own opinion of this variety, but it is difficult to suspend judgment on anything, particularly so when it is your contemporary's novelty. Nothing was too bad for Afterglow up to last December. The November fog affected this variety more than any other, many of the blooms never opening. The lack of sun during the entire winter robbed its color of richness and developed a magenta shade in it, while the flowers themselves were small. Yet, since the turn of the year an entirely different tale has been told and this variety has gradually won increased favor. When good, the color is the correct shade for us over here, and the habit of growth is also good. So, under the prevailing circumstances, regarding Afterglow we can tell you better next year what our opinion really is.

Andrew Carnegie was not taken up seriously by many, its parent being no recommendation to it. Certainly it has a good shade of color, but that is all.

As to Defiance, this was certainly a most unfortunate name to select, and, as it has done with us, it is the biggest collection of bad points we have ever seen in any named carnation, but we simply attribute this to the fact that it is not suited for our climate. None of the growers will grow it next year.

Harvard has been disappointing because of its shyness. The color is rather too dull, yet what flowers it does produce are of good size. Also its stem, calyx and habit of growth are worthy of a better variety. Certainly no one could live on the returns from Harvard.

Sarah Hill has made many friends and, speaking generally, is well liked. It comes an enormous size. While its lasting capacity is not of the best, its odor is strong, this being quite an important feature over here. Its habit of growth, which is free and short, also is preferred to too long a stem.

Lawson-Enchantress has not met with much favor under any of its several names, the growth being much too soft for this climate, and after its first crop of bloom it takes too long to produce other good flowers. Competition is too keen in this shade of color for it to survive.

Winona is an uncertain variety, its color hardly being distinct enough to warrant its dissemination. Also the flowers over here lack size and petalage. Yet its habit is free, but its stem is weak here in winter.

The prevailing tendency over here among commercial growers is to stock light on the novelties, chiefly because they appear to want twelve months to recuperate and become acclimated before we know what we have got.

Montague C. Allwood.

SOIL FOR THE BENCHES.

I have a rich soil, to which I have added a heavy coat of well-rotted horse manure, well worked in. Do you think this is too rich to put in benches for carnations? The soil has little sand. Would you advise using any feeder with this soil? If so, what kind and at what time? I have an abundance of liquid manure. Would you advise using it on carnations or plants of any kind? I also have a lot of cement paint left over from painting a barn roof. Do you think it would be of any benefit to paint benches with this?

It is not likely that your soil will be too rich to grow good carnations. If your soil is a fairly heavy soil, that is, a soil with a good body to it, and the coat of manure of which you speak does not amount to more than one-fourth as much as the soil, it will not be too much, providing it is well mixed with the soil. I would not add any other feeder until the plants are established and you can see by the growth what is needed. You may be able to use the liquid manure to good advantage later on, but just now it is of no use to you for carnations. Don't think of putting any of it on your new soil.

The cement paint will preserve your bench lumber for several seasons and it will do the plants no harm.

A. F. J. B.

AMERICAN CARNATION SOCIETY.

Recent Registrations in England.

The following new carnations have been registered during the last season with the Perpetual Flowering Carnation Society of England. Growers on this side will please take notice, to avoid duplication of names.

Name of Variety, and Color.	Reg. By.
Hon. Mrs. F. Agar,* deep rose-pink.	Hon. Francis Agar.
Mary Vilren,* rose.	Blackmore & Langdon.
Ranslon Gem,† apricot and orange.	Sir R. L. Baker, Bart.
Rose Dore,* golden rose.	W. H. Lancashire.
Golden Glory,* yellow.	Heath & Son.
Ethel Whitney,* crimson.	Gor & Whitney.
Carola,* crimson.	C. Engelmann.
Rex,* light pink.	C. Engelmann.
Burrough Scarlet,* scarlet.	E. T. Johnstone.
Black Chief,* crimson.	Hugh Low & Co.

* Seedling. † Sport from Boyes' Victory.

SWEET PEA SOCIETY.

First Exhibition Next Week.

The proposed National Sweet Pea Society of America will hold its first annual exhibition at the Museum of Natural History, Columbus avenue and Seventy-seventh street, New York city, July 7 and 8. Siberian hall will be available for the convention.

The judges will be G. W. Kerr, with W. Atlee Burpee & Co.; Wm. Sim, of Cliftondale, Mass., and Edgar A. Higgins, of Avoca, N. Y.

Papers will be read by Rev. W. T. Hutchins, of Santa Rosa, Cal.; Prof. Craig, of Utica, N. Y., and others.

Great interest is being shown by sweet pea enthusiasts throughout the country and it is expected that there will be over 1,000 vases of sweet peas exhibited.

The National Sweet Pea Society suggests that an ideal bunch of sweet peas in the vases supplied by the society consists of not more than twenty sprays.

The judges will be instructed to regard the overcrowding of a vase as a fault. The sweet pea foliage only is allowed to be used with the flowers unless otherwise specified. Wiring the flowers or stems will disqualify.

The scale of points is as follows:

Stem	35
Number of flowers on a stem	25
Color	15
Size	15
Rarity	5
Fragrance	5
Total	100

The schedule is as follows:

Class 1. The Arthur T. Boddington cup for the largest collection of sweet peas; number of varieties to count.

Class 2. The W. Atlee Burpee cup for the largest collection of sweet peas. The number of varieties to count.

Competitors cannot compete in class 1 if they compete in class 2, or vice versa.

Class 3. The Peter Henderson cup or its value for the best twenty-five vases distinct varieties.

Class 4. The W. W. Rawson silver medal for the best twelve vases distinct varieties.

Class 5. The Stumpp & Walter prize, $10 in gold, for the best six vases distinct varieties.

Class 6. The Henry A. Dreer prize, $10 in gold, for the best ten vases of sweet peas, Spencer or Unwin flowered, in ten varieties.

Class 7. The Morris County Gardeners' and Florists' Society's prize for the best six vases sweet peas, six varieties, twenty stems to a vase, 1st prize, $10; 2nd prize, $5.

Class 8. The C. C. Morse & Co. cup for the largest collection of sweet peas, number of varieties to count, open to the trade only.

Class 9. The J. M. Thorburn & Co. prize for the best fifteen vases sweet peas, fifteen varieties, 1st prize, $10; 2nd prize, $7; 3rd prize, $2.50.

Class 10. The W. Atlee Burpee prize for the best vase of waved or Spencer type sweet peas introduced 1909, 1st prize, $5; 2nd prize, $3; 3rd prize, $2.

Class 11. The Watkins & Simpson prize for the best three vases of sweet peas disseminated in 1909.

Class 12. The Henry F. Michell prize for the largest and best vase mixed sweet peas, $5 in gold.

Class 13. The F. R. Pierson Co. prize for the best three vases of sweet peas, three distinct colors, 1st prize, $5; 2nd prize, $3; 3rd prize, $2.

Class 14. The Florists' Exchange prize, for the best twenty-five stems mauve or lavender sweet peas, one variety only, Unwin and Spencer types barred, $5 in gold.

Class 15. The Harry A. Bunyard prize, for the best vase of Helen Pierce or King Olaf, 1st prize, $5; 2nd prize, $3; 3rd prize, $2.

Class 16. The John Young prize, for the best vase of sweet peas, crimson, one variety only, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

Class 17. The Jerome B. Rice prize, best vase of sweet peas, white, one variety only, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

Class 18. The H. E. Fiske Co. prize, for the best single vase of violet or blue sweet peas, one variety, 1st prize, $5; 2nd prize, $3; 3rd prize, $2.

Class 19. The Harry Turner prize, for the best vase of sweet peas, light pink, one variety only, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

Class 20. The Frank H. Traendly prize, for the best vase of orange shades sweet peas, one variety only, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

Class 21. The C. C. Morse & Co. prize, for the best vase of sweet peas, dark pink, one variety only, 1st prize, $5; 2nd prize, $3; 3rd prize, $2.

Class 22. The Charles H. Totty prize, for the best vase of sweet peas, yellow, one variety, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

Class 23. The Arthur T. Boddington prize, for the best vase of sweet peas, bicolor, one variety, 1st prize, $3; 2nd prize, $2; 3rd prize, $1.

All the above varieties of sweet peas must have been grown outdoors.

Any further particulars may be had by addressing H. A. Bunyard, 342 West Fourteenth street, New York.

LANSING, MICH.—Alderman Van Halteren has made a suggestion to the council in favor of establishing a city greenhouse. He thinks that an old building owned by the city might be remodeled for the purpose.

CINCINNATI, O.—The greenhouse in the rear of the residence of Mrs. James H. Perkins, Stettinius avenue and Observatory road, Hyde Park, has been completely destroyed by fire. The loss amounted to $800.

.....BUSINESS AND OTHER NOTES.....

WEST GROVE, PA.—D. H. Green is well satisfied, so far, with this season's business.

STAMFORD, CONN.—Mrs. A. Lindstrom says business has been so good at her place that there has scarcely been time to eat.

PORTLAND, CONN.—Otto Keser furnished the decorations for the wedding of Judge C. W. Cramer and Miss Flora Marshall.

LOWELL, MASS.—J. J. McManmon has been cleaning out his greenhouses of bedding plants, preparatory to setting out chrysanthemums.

MILFORD, CONN.—Comstock & Hungerford had the contract to plant the flowers in the new mounds that have been laid out in the park.

LAWRENCE, MASS.—W. F. Regan had charge of the decorations for the George-Coash wedding. Palms, spiræas, hydrangeas and carnations were used.

HOOSICK FALLS, N. Y.—Arthur O. Curtice is installing a new tubular, return steel boiler, manufactured by H. S. Simmons, of North Bennington, Vt.

CLINTON, MO.—A. Woerner says: "We have had the best trade and the worst hail storms I have ever experienced, but I am still on the spot I settled on eleven years ago."

FALL RIVER, MASS.—Frank Buffington decorated both the church and the residence for the recent Harley-Pierce wedding. The affair was a brilliant one and the decorations were elaborate and tasteful.

KENDALLVILLE, IND.—Mr. and Mrs. H. W. Johnson have sent out cards announcing the arrival of a little girl, who is being introduced to visitors as Miss Ruth Mary Johnson.

STONEHAM, MASS.—A. S. Parker, the Farm Hill florist, is to begin the erection at once of two more greenhouses, each 200 feet in length, on his land, and will make a specialty of the production of violets and chrysanthemums.

AKRON, O.—James Salmon finds it a good advertisement to each year plant flower beds on the lawns at the fire-engine houses, which would otherwise go unembellished; it gets the entire fire department "plugging" for him.

WORCESTER, MASS.—T. C. Thurlow, West Newbury, made an exhibit of between sixty and seventy varieties of peonies at the last meeting of the Worcester Horticultural Society, George C. Thurlow personally staging the exhibit. There also was a large display of hardy roses, perennials and strawberries.

GLOVERSVILLE, N. Y.—Richard E. Loeben is adding another section to his greenhouses, on North Main street. The new building will contain 10,000 square feet of glass. With this and other recent additions and improvements, Mr. Loeben will have one of the largest and best equipped ranges in this part of the state.

POUGHKEEPSIE, N. Y.—John H. Edmonds, a florist, and Mrs. Jennie Benney were married June 16.

NEGAUNEE, MICH.—The management of the Negaunee Greenhouses is sending out postal cards containing a picture of the plant.

NEW CASTLE, IND.—Peter Weiland has taken charge of the greenhouse plant which he recently purchased from L. A. Jennings.

LANCASTER, PA.—Peter Brown, the pansy grower, will visit Europe this summer to see if there is anything new in the pansy business there.

NEW PORTAGE, O.—C. R. Young has sold the Sunnyside Greenhouses to Edward L. Bawers, of Pittsburg, and has removed to Akron, where he has taken a position with the Imperial Greenhouses.

PITTSFIELD, MASS.—While L. W. Acheson, the Hamblin street florist, was operating his automobile recently, his hand was caught somewhere about the machine and one of his fingers was badly smashed.

MISSOULA, MONT.—J. H. Smith, formerly at Painted Post, N. Y., is now with the Missoula Nursery Co., in this place. Business, he says, is good. Carnations are still of satisfactory quality, owing to the cool nights.

FORT WAYNE, IND.—Besides continuing to operate the greenhouses on Walton avenue, A. J. Lanternier & Sons have now bought the Scherer greenhouses, on Maumee avenue, containing 10,000 feet of glass. As the newly purchased range is directly opposite Concordia cemetery, the spring trade there is good.

MENOMINEE, MICH.—Charles Schulz, who some time ago purchased two lots at the corner of Dunlap avenue and State street, will there erect greenhouses which will practically double his area under glass. He will also build a new heating plant. The new houses will be completed and in use before fall.

AUSTIN, TEX.—E. Friedrich is now building his third greenhouse and will be obliged to install a larger boiler. Two of the houses will also be fitted with new ventilating apparatus. He says that, though overcoats were in use in May, a temperature of 110 degrees is not unusual now, and outdoor vegetables, corn and grass are burning up.

ASHEVILLE, N. C.—E. E. Brown, proprietor of the Brownhurst Greenhouses, is moving his glass out from town about three-quarters of a mile, where he will get better light and have room for expansion. He will this season add a rose house, 30x150 feet, to the glass to be moved. A store will be opened in the city.

RANDOLPH, VT.—H. M. Totman will build a greenhouse, 23x100, to take the place of the oldest and smallest of his four houses. He will also build a lean-to, 7x100, for violets. With these additions, his range will contain 17,000 square feet of glass. His plan of improvements also includes a storage shed and cement coal cellar.

RESULTS.
We give them. You get them.
We both have them.

The use of flowers at commencements is on the decline.

A sweatshop? Nobody expects the greenhouse to be anything else in hot weather.

Be a good collector; you may lose a little business now and then, but you will have more money and more peace if you watch credits and push collections.

The New Orleans correspondent chronicles the determination of the promoters of the Society of Southern Florists to let the organization lapse because of lack of support.

Lyman B. Craw, of Lord & Burnham Co., is convalescing after the severe surgical operation recently undergone, but will not resume business cares before autumn.

Get a printed letter-head; some of the best firms in the trade do not allow wholesale prices to those whose connection with the business is not apparent by their stationery.

Queen Victoria, of all peonies used for cut flowers for market, is planted in largest numbers. It is not argued that Queen Victoria is the best white peony, but certainly no other excels it in the qualities necessary for cold storage.

SELLS ANYTHING.

There are many factors which may influence an advertiser part of the time, but it is actual results which influence him most of the time.

One insertion of my For Sale advertisement in the Review brought a buyer for my greenhouse establishment; I think there is no paper like the Review.—C. R. Young, New Portage, O.

Please stop my advertisement in the Want department. I have sold the boiler to the one who answered first, and from the number of replies that I got I could have sold it a dozen times over.—M. B. Schreiber, McDonald, Pa., June 28, 1909.

Omit Elegantissima from our advertisement; we had a surprisingly large call for plants on account of that little adv.—Truitt's Greenhouses, Chanute, Kan., June 28, 1909.

OBITUARY.

Mrs J. M. Jordan.

Annie Brill Jordan, widow of the late J. M. Jordan, of St. Louis, died June 22, at Omaha, Neb., where she recently had been living with a son. She was 75 years of age. J. M. Jordan was president of the S. A. F. in 1890, and Mrs. Jordan was well known to the older element in the society.

CORRECTION.

Lager & Hurrell, Summit, N. J., ask the correction of an error which appeared in the copy for their advertisement printed on page 63 of the June 17 issue of the Review; viz.: Brassovola Digbyana should read plants with five to six bulbs, $9.00 per dozen, $60.00 per hundred.

HOLLYHOCK BLIGHT.

What is the best remedy for hollyhock blight, or rust? Bordeaux, as I make it, does not seem to do much good. I am trying sulphur now. S. J. G.

I doubt if there is any real cure for the hollyhock disease, once it has a start. Some growers seem to think that Bordeaux mixture, if sprayed on before the disease appears, will act as a preventive, and I agree with them. When spraying, a common error is to wet the upper instead of the lower leaf surface. It is on the latter that the disease germs start. Ammoniacal carbonate of copper and permanganate of potash have each been tried with success as a preventive.

On the first appearance of diseased plants pull them up and burn them, or at least remove affected leaves. Spray before you see any signs of blight and you may save your plants, although hollyhock culture is at best something of a lottery of late years. C. W.

CHICAGO.

The Great Central Market.

A week of continued high temperatures has brought the market nearly to the usual midsummer status. Last week there continued to be large receipts of all kinds of seasonable stock. The quality generally was rapidly deteriorating, because of the weather conditions, and so far as prices went last week was the worst of the year to date.

This week some improvement is noted. The supply of roses is slightly reduced, but the quality of the greater part of the stock is so extremely poor that it has no selling value and can only be jobbed off. The supply of really good roses is not large and it appears that the country buyers also find most of the roses poor in their own communities; a large number who have been getting along with local supplies are again calling on this market for good roses.

Beauties continue in large supply, although there is prediction that it will not be many days before the receipts are considerably reduced. Several houses are cutting excellent stock and, because of the low price, it is moving fairly well, leading stores using Beauties in quantity. It is said that never before in June have Beauties been so plentiful, so good and so cheap, with the result that many buyers who have not heretofore used Beauties have become regular buyers.

Of other roses, Killarney easily holds the lead, although its leadership is beginning to be challenged in one or two houses where My Maryland is coming in nicely. Of white roses, Kaiserin is the only really salable article. Richmond is in little demand since summer came.

The carnations are steadily going down hill. With most growers the stock is small and soft, but there are a few who still retain size. At this season the carnation ceases to be the important shipping flower that it is during the cool weather. It will not be long before growers throw out carnations.

The peony season came to a sudden end, receipts practically ceasing June 23; the sudden wave of extreme heat popped the flowers open so fast the cutters could not save them. There are large quantities in storage. The owners generally have been pulling out the stock which does not appear to have keeping quality, and have been jobbing it off at any price they could get. Most of the houses assert that so far as their own stock goes, they have nothing left but entirely dependable goods, but each one admits the other fellows have still in the freezer considerable quantities of doubtful keeping quality. Prices now range up to 50 cents, with a few selected

Beauties

Use OUR Beauties and YOUR customers will buy right through the summer.

There's never any flower that will take the place of the Beauty with the flower buying public. And there are no Beauties that will take the place of our Beauties with the Trade. Leading stores are buying in hundred lots—when **their** customers see them, nothing else will sell.

We have a big cut of Beauties from plants grown cold all winter on purpose to give a summer crop. Splendid buds, fine foliage, heavy stems, all lengths. Enough so no buyer need go without really good Beauties.

Peonies

The Peony, when everything is right, is a reliable flower for shipping and use in July. But not all growers put up stock that will ship with satisfaction. We are headquarters for the Peonies of the oldest and most experienced grower—one whose stock always ships well. Get our quotations if you can use a quantity for a decoration.

Kaiserins

When a good white rose is wanted there is nothing will take the place of **OUR** Kaiserin. Far better than the best Bride—and our cut is large; it will continue all summer—don't forget.

Killarney

Our Killarney are fine. Clean, strong growth, with flowers of perfect color. We can supply any length in quantity.

You ought to have the above 4 items always in stock.

Summer Flowers

No matter what you want in Summer Flowers, order of us and get fine stock. Sweet Peas, Lilies, Shasta and Yellow Daisies, Gladioli and everything else in season.

Green Goods

We have long, heavy strings of Smilax in quantity. Farleyense and Adiantum. The finest Fancy Ferns sent out from Massachusetts this year.

Fancy Valley Always on Hand

Mention The Review when you write

bunches going higher, but the prospect for getting usual values on stored peonies is not bright; the quantity in storage is greater than usual July 1 and because of the hot weather in which much of the stock was cut, the keeping quality can hardly be as good as usual.

The indoor sweet peas are practically gone, but there are immense quantities of outdoor flowers of fine quality; prices are low. Indoor gladioli are about used up, with the outdoor stock not yet coming in. The receipts of Easter lilies have lightened, but there are candidums from Michigan, but these have been slow sale for several years. There is a good call for Shasta daisies and yellow daisies, which it is not always possible to meet; some buyers are able to use field daisies and coreopsis instead, these being plentiful.

The call for smilax and asparagus strings has run off. Good ferns are now abundant. Leucothoe is the one scarce item among greens.

Beginning today, the wholesale houses will close at 5 p. m. Buyers should remember this during July and August.

Monday, July 5, will be observed as the Fourth. The wholesale houses will close at 12 o'clock. There will be two mail deliveries, the last leaving the postoffice at 9 a. m.

Fleischman's Plans.

It is stated that the Fleischman Floral Co. is planning to open a second downtown store next season, several propositions being under consideration. The opportunity for a store in the new La Salle hotel has been decided against, because of the commercial character of the hotel.

A preliminary will be the sale of the North State street store, for which a purchaser is sought.

Business in June.

The June business was in many ways a disappointment, but in the money value of sales it was up to the best previous records, with a margin of gain. Practically every house did as much in dollars and cents as ever before and some that were fortunate in having the right goods made quite satisfactory increases. The unpleasant feature was the extreme glut of carnations in the early part of the month, followed by an equally bad glut of roses in the latter part of the month. If there is anything in cheap prices educating the public to become flower buyers, June had a greater educational value than any month of recent years.

Winterson's Seed Store

45-47-49 Wabash Ave., Long Distance Phone, Central 6004, CHICAGO

Plantsmen, Nurserymen, Seedsmen and Florists' Supplies

We can supply everything the Florist uses. Catalogue Free.

Mention The Review when you write.

Most of the wholesale houses close their year's business June 30. With practically all the year was a better one than the preceding.

Florists' Picnic.

At a special meeting of the Florists' Club, June 25, it was decided to hold the Florists' Club's annual picnic at Riverview park, Thursday, July 22. The festivities will occupy the afternoon and evening and practically all wholesale and retail stores will close at 1 p. m. that day.

The grounds are so readily accessible that it is expected to break all records for attendance. The admission will be 50 cents, children accompanied by parents free.

Various Notes.

Poehlmann Bros. Co. report Monday, June 28, one of the heaviest shipping days of the season. Credit for this is given to the fact that the peonies, of which so many buyers now have a local supply, are out of the way and the heat has spoiled the roses and carnations through the country, so that if good stock is wanted it is necessary to come to Chicago for it. Poehlmann is cutting My Maryland in considerable quantity. The stock attracts much attention, because some of the stems are twenty-four to thirty inches, with large buds of a delightful shade of even pink. The first White Killarney were cut June 28.

The Bohannon Floral Co. has the order for a large decoration for the Pike dinner, July 1.

J. P. Risch says that with Weiland & Risch June has been a better month than last year. The first five days were dull. Then came ten days of splendid business, which held up the record for the month, in spite of the depression of the last fortnight.

At E. H. Hunt's June business has been excellent, both in cut flowers and supplies; and last week the supply department cat had six kittens.

John Sinner and N. J. Wietor leave July 5 for their annual fishing trip in Wisconsin.

Word was received June 28 of an accident which had befallen Joseph Smely at Aurora. He was overcome by the heat and fell into a tub of water so hot that it scalded him and he is in the hospital.

Charles Klehm, of Klehm's Nursery, says he thinks the peony is decidedly overdone, although the poor results this year may not recur in a normal season; this year the local peonies were so late that the best of the season was over before cutting began. Mr. Klehm says they are not vitally interested in the peony situation, because their general nursery business has grown to the point

SPECIAL
July Sale of **Wire Work**

Order now—delivery any time you say

We are quoting special prices on wire work to be made up now, to keep our factory going full force all summer. Capable wire workers are not to be had every day and we do not want to lay off any of our present large force of skilled workers—we shall hold them through thick and thin, for they are turning out

A grade of wire work not excelled in this country.

So we offer special inducements for orders to keep us going during July and August. Order now—the special rates will be withdrawn when we have booked two months' work. Send a list of what you can use and we will quote—the larger the order, the lower the price.

Remember, we have A COMPLETE STOCK OF FLORISTS' SUPPLIES and can supply any article you need at a moment's notice

The Ribbons You Are Always After, But Seldom Get

The qualities that have the rich, brilliant luster, feel as though you had something more than paper in your hand when you touch them, colors that match Flowers, in narrow, medium and wide widths; Qualities that will please your customers every time.

We manufacture

Four miles of such Ribbons every day, which we sell

direct to the trade—prices are no higher than flimsy Ribbons, because the jobber and other unnecessary selling expenses are left out of our calculations. Pine Tree Ribbons are the best on the market, yet costing no more than poor qualities.

Samples on request, also Chiffons.

The Pine Tree Silk Mills Co.

where they have a pay roll of $1,000 per week.

A. L. Randall and family have gone to their farm in Michigan for the summer.

The Florists' Club will hold its regular meeting at 7:30 tonight, July 1, at the Union restaurant, for the election of a secretary and three trustees.

During a special meeting of the Florists' Club, June 25, in the office of Poehlmann Bros. Co., O. W. Frese lit the gas stove unobserved, went out and closed the door. The outdoor temperature was only 86 at the time.

Bassett & Washburn are more than satisfied with the business year which closed yesterday. Without an increase in their glass area, their sales for the last twelve months exceeded anything in the history of the firm. This is omitting the income from the dissemination of the new carnation, O. P. Bassett, which occupied a considerable part of their space and of which they sent out over 200,000 cuttings, besides those retained for their own planting. Under the circumstances Mr. Washburn considers the year by far the most successful they ever have had.

E. C. Amling says the stores are paying better prices for outdoor sweet peas than they did in other years, but that the Greeks are not willing to pay as much as heretofore, having become accustomed, by recent market conditions, to making inordinate profits.

Vaughan & Sperry are looking forward to an excellent summer business and say the aster crop promises to eclipse all records.

E. E. Pieser, of Kennicott Bros. Co., says events have justified his prediction of several years ago, that the busy season would begin later and end earlier year after year.

The office of the E. F. Winterson Co. begins to look like a silversmith's, with the accumulation of bowling trophies for the Cincinnati doings.

Peter Reinberg has cut down on the space given to Mrs. Field to get more room for My Maryland, Killarney and White Killarney.

C. W. McKellar says there again is no scarcity of good cattleyas.

At J. A. Budlong's, Phil Schupp says the year has given an excellent increase in sales without any increase in glass.

Elsewhere in this issue is a description of the new style of ventilation adopted this summer by Emil Kroll, one of the rose growers for Zech & Mann.

O. P. Bassett and E. B. Washburn are on a trip east in the automobile of Charles Phillips, one of Mr. Bassett's business associates at Aurora. They spent June 29 with Mayor Breitmeyer at Detroit.

Louis Wittbold is at Wheeling, Ill., where Mrs. Wittbold's father is seriously ill.

Among recent visitors have been J. H. Durham, Mound City, Mo.; C. E. Schaefer, La Crosse, Wis.; J. Stamm, Hutchinson, Kan.; J. A. Newhall, Aurora; Albert Rott, Joliet; A. F. Wienold, Fort Atkinson, Wis.; George F. Crabb, Grand Rapids.

Bowling.

Craig	133	104	105
Vogel		95	79
Ringler		177	100

GREENFIELD, MASS.—Frank J. Yetter has invented a staple with which it is possible to tie down flowers packed in pasteboard boxes, holding them securely in place and thereby preventing the shucking, bruising and frequent breaking of flower heads from the stems. The device is equally useful in staying funeral designs in boxes for shipment and for adjusting the covers of telescope boxes to any desired height. He calls it the Security staple.

MILWAUKEE.

The Market.

Summer arrived in due time and with it came the first really warm weather, which has already proved that this season is practically at an end. The extremely warm nights hustled all indoor and outdoor stock along; consequently the supply was away ahead of the demand. There was the biggest glut of the season in peonies, carnations and roses, with the exception of Beauties and Killarneys. The only flowers holding their own were sweet peas. And all this caused a great deal of hustling, with no great margin. It again showed that it pays to grow good stock only, for the poor grades took a rapid exit toward the dump. The first part of the week there was not much doing to help relieve the situation, but in the latter part there were several commencement exercises that helped some. Now that the schools are closed, most folks leave for their summer homes, thus putting an end, as it were, to this season, which, from reports, has been a most satisfactory one.

Various Notes.

In looking over past records, the Edlefsen-Leidiger Co. finds that business from May 20 to June 20 this year surpassed that of the same time in any of the five previous years.

The C. C. Pollworth Co. has the material on hand for the addition of several greenhouses.

Posters are up announcing the fourth annual picnic of the Milwaukee Gardeners' Association, to be held July 18 at Jones' grove. Everybody is welcome.

The premium list of the State Board of Agriculture for the state fair, to be held September 13 to 17, is out and anyone interested in the flower bed division can secure one by addressing John M. True, secretary, Madison, Wis. Through the efforts of our Florists' Club the prizes were arranged in a more satisfactory manner.

Although the weather has been hot of late, we have been blessed with showers at short intervals and stock in the field is in a fine growing condition.

The Holton & Hunkel Co. has its two new houses in fine shape, and planted with Beauties and tea roses at this time.

E. O.

Last week was about the worst experienced in this market for some time. There was a continuous glut of stock from one end of the week to the other, due principally to the sudden warm weather coming in the first part of the week, crowding in all the peonies at one time, as well as a heavy crop of carnations and roses, which made it impossible to move all the stock at respectable figures, and quite a quantity of it went to waste. Although there were quite a few wedding orders as well as commencement exercises in some of the schools, yet this had little effect on the market, considering the stock coming in, and much of the stock needed sorting over to a considerable extent.

The C. C. Pollworth Co. found it necessary to add two propagating houses to take care of the young stock. C. C. P.

NEW YORK.

The Market.

The last week has broken all June records for uninterrupted high temperature. At times the mercury touched 100 degrees and nothing under 90 degrees was given consideration at all. A cyclone of rain fell Friday night, June 25, and Sunday, June 27. This week opens with a record of 80 degrees, so it is hot enough for anyone, and the indoor stock of roses and carnations is largely unsalable. If one asks an authority for quotations, he is apt to get the cold shoulder, which is the only cold thing in the street, and is told, "Don't quote anything; there is no business! Nobody wants nothing." And that about expresses it.

The highest quotations are for only a little of the selected stock used by the elite stores, where price always is a consideration second to quality. These society people pay the same for their roses and orchids the year around and know nothing about fluctuation in values outside of Wall street. It is difficult to make the final price at which the wholesalers close out the surplus daily low enough to indicate the slaughter. From now until September money talks and some of those department store plungers will escape with a load of lilies, roses and carnations and pay from $10 per thousand down.

All roses this week show the effect of the heated spell and few arrive that are salable at all. Beauties have to be superb to sell at 10 cents. Peonies are through. Some stock comes in daily and stays in. The last storm ended their beauty. Carnations can be bought from 1 cent down and the sleepy ones might better have stayed at home. Sweet peas, when perfect, hold their values well. The exhibition of them at the American Institute of Natural History, July 7 and 8, will place them on a prouder pedestal. The society and its exhibition promise to be a great success. Secretary Bunyard has done much missionary work. The interest awakened is remarkable.

Plenty of orchids are arriving, splendid stock, worthy of double what is realized for them. Gladioli are here from the south and the price is falling. The local shipments cannot be long delayed. Soon the old, familiar figure of 50 cents per hundred will be in evidence.

There seems to be no influence possible whereby to lift the market in July. It and August will be months for repairing the fences, recreation by the sad sea waves and in the reverberating mountains, the visitation of the patient, wealth-producing growers and the completion of plans for the great season of prosperity this fall and winter, "when the frost is on the pumpkin and the corn is in the shock."

The market is flooded with Crimson Ramblers, stocks, feverfew and herbaceous stock of every kind. They add variety to the retail windows. The water lily and the miniature ponds with fish, frogs, turtles and fountains are again in evidence. The good old summer time is here.

Various Notes.

The outing Thursday, July 1, was the talk of the town at the first of the week. Everybody is going and a grand time is anticipated. The young men of the street are especially enthusiastic. The ball games will be bitterly fought and several of the wholesale houses will follow Arthur Boddington's method, and close for the day. John A. Foley, with Lecakes & Co., has had his express wagons decorated with the announcements of the outing. Everyone in the wholesale section, and this applies also to the seedsmen and nurserymen, has taken the most loyal interest in the success of the annual festival.

Early closing is still a vital question. Only a few stand in the way of its general observance. Closing at 1 p. m. during July and August should be the universal decision.

The auctions are over for the season.

The Astoria bowlers are still practicing for Cincinnati. Friday evening, June 25, after a spin in their touring car, they enjoyed a bowl and dinner at one of the Long Island popular resorts, and think they are ready for anything the S. A. F. can materialize. Captain Fenrich, of the New Yorks, is also hopeful of getting a team together to better last year's record, when, owing to the sudden illness of one of its members, the club lost the championship by five measly pins. The New York bowlers will practice at Thumm's alleys every Tuesday evening.

Harry Cathcart, of the Yuess Gardens Co., Newburgh, whose stock is handled in New York by Henshaw & Fenrich, was operated on for appendicitis last week and rallied satisfactorily from the ordeal and at last report was out of danger.

The Greek Florists' Retail Association's outing, July 29, is the next annual event that is always a success. All arrangements have been made and Wetzel's has been chosen for the festival. A great many of the English speaking wholesalers and retailers always attend. The Greek games and dances are well worth witnessing.

Mr. and Mrs. Jos. A. Levy, of John Seligman & Co., are summering at Sea Gate, L. I.

The interest in the coming S. A. F. convention at Cincinnati is growing and there will be a good attendance from the east. The weather of the last week here will make Cincinnati weather, even in August, seem cool. The committee of the Florists' Club has decided on the New York Central as the official route. The fare, including Pullman, will be less than $40, all expenses included.

Last week's distinguished visitors at New York, from the western part of the state, included W. F. Kasting, of Buffalo, and Peter Crowe, of Utica.

Horace E. Froment spent the hot week making it hotter for criminals, on jury duty. Most of the prominent wholesalers took their turn at it. A few escaped. Those who thus toiled for their country cheerfully declared the obligation could not have come upon them at a better time.

Mr. Sinn, with John King Duer, has charge of the gardens at Steeple Chase and Kessler Bros. decorated Dreamland, at Coney Island. J. Austin Shaw.

Uniontown, Pa.—A hail storm last month broke a considerable quantity of glass at Chas. H. Cramer's greenhouses.

BOSTON.

The Market.

The last week, which opened auspiciously and promised to be the best of the month, proved a most disastrous one for the cut flower trade, the terrific hot wave upsetting all calculations and causing a greater waste in flowers than has been seen for many a day. It is impossible to quote prices even now, for demand is slight compared to the floods of flowers arriving. Peonies, which were at their flood tide last week, came in with a grand rush and large quantities went to the rubbish heap. Roses fared as badly. The indoor varieties suffered from the heat and an abundance of fine outdoor hybrids made them sell the poorer. Carnations are getting small and poor

A Modern Sacrifice

To induce you to buy Cut Flower and Design Boxes we made the prices cheap enough (the Flower Boxes are as good as ever) so that you wouldn't mind putting in a stock of 500 or more in assorted sizes at these prices, which are much less now than later in the fall when the busy season opens up. We want to overcome the summer dullness and these prices ought to do it.

and have sold at unheard-of prices. The call for these has been slow.

Sweet peas from outdoors are now abundant and quite good; even these have been in the dumps. For valley there was an irregular call. Cattleyas are now scarce, Mossiæs being over. Gardenias are also nearing the end. For miscellaneous flowers the call has been slight. Prospects for business for the next two months are not brilliant and the markets will now lapse to midsummer dullness. The pulling out of rose and carnation crops, preparatory to replanting, will somewhat relieve the congestion in these two staples.

Rose and Strawberry Show.

It is doubtful if hotter weather ever was experienced for the annual rose and strawberry show, held June 26 and 27 at Horticultural hall. A solid week of 90 to 95 degrees in the shade was altogether too much for hardy roses, and while these have been unusually fine this season, the broiling heat reduced the exhibits materially. Nevertheless there was a large and interesting show, filling the main hall, side hall and loggia.

M. H. Walsh was, as usual, the largest and most successful exhibitor of roses. Others who contributed large numbers were: W. J. Clemson, J. O. Christensen gardener; W. A. Riggs; George R. White, F. Galvin gardener; A. F. Estabrook, George Barker gardener; J. G. Wright, M. Gorman gardener; E. G. Lincoln; Mrs. E. M. Gill; Charles W. Parker; Robert Seavee; E. L. Lewis and Jackson Dawson.

The last named exhibitor secured a silver medal for a pretty new single rose, named Professor Sargent, secured by crossing Wichuraiana with Crimson Rambler and the resultant cross with a pink hybrid perpetual. The flowers were of a pleasing pink color.

Frau Karl Druschki showed up splendidly in all collections and seemed to be the most popular hardy rose in the show. Peonies were largely shown by E. J. Shaylor, R. & J. Farquhar & Co., T. C. Thurlow, George Hollis and other specialists. There was a grand show of hardy perennials. Farquhar & Co. had the largest and most impressive display in competition for the gold medal, massed for effect among rocks and suitable greenery. Bellevue Nurseries had a table tastefully arranged. Oak Town Nurseries also had a fine collection, also Walter Hunnewell, T. D. Hatfield gardener, W. A. Manda and others. Martin Sullivan had an extensive display of sweet williams and Canterbury bells. W. A. Riggs also had a fine display of hardy herbaceous plants. Mrs. Frederick Ayer, George Page gardener, had two long tables of sweet williams and Canterbury bells, 250 vases in all.

Charles Sander, gardener to Prof. C. S. Sargent, received a silver medal for a new pink rhododendron, a pleasing shade of color, the result of a cross between maximum and an Italian hybrid. F. J. Rea had herbaceous plants and nymphæas. W. W. Rawson & Co. had a big collection of the newer sweet peas, awarded a first-class certificate, also Spanish iris and Lilium Martagon. A few specially good sweet peas noted were: Apple Blossom Spencer, Miss Evelyn Hemus, Gladys Deal, Kitty Clive, Mina Johnstone, Paradise, Mrs. H. C. Philbrick and Hester.

Bellevue Nurseries received a bronze medal for their artistic display of herbaceous perennials. W. G. Postings had a display of Delphinium Belladonna of a branching habit, awarded a first-class certificate, also a selection of Sutton's Pink Beauty sweet william.

Strawberries were unusually well shown. Golden Gate proved to be the champion variety. This promises to be the most widely grown strawberry in New England when better known. Marshall was largely shown and in color and flower still holds a high position. Barrymore and The Hub, among the new candidates, seemed to be the most desirable.

Various Notes.

An exact reproduction in miniature of the house and grounds of President W. H. Taft's summer residence at Beverly, Mass., filling one of T. F. Galvin's big show windows on Tremont street, has attracted large crowds of spectators during the last few days. W. W. Rawson & Co. were responsible for the work, which was finely carried out under the supervision of Maurice Fuld.

The Gardeners' and Florists' Club's picnic will be held at Randolph grove, July 28. It would be difficult to find a more ideal spot for the annual outing, the grove being comparatively easy of access, yet insuring privacy. There is a large lake, ample open spaces for sports, suitable buildings for refreshments and about every convenience required. Randolph grove was the scene of the picnic a few years ago.

John K. M. L. Farquhar, who starts on his European tour next week, will go by the Scandinavian line to Copenhagen. His itinerary will include Denmark, Holland, Germany, Sweden, Norway, France, Great Britain and southern Spain, returning from the latter country via Azores and reaching New York about the end of September.

W. W. Rawson & Co. will be large ex-

Mention The Review when you write.

hibitors at the first exhibition of the sweet pea society in New York.

Visitors during the last week included John S. Hay, Philadelphia; C. B. Weathered, New York; W. A. Manda, South Orange, N. J., and Paul Pfitzer, Stuttgart, Germany. Mr. Pfitzer is making an extended tour, which commenced last December in Jamaica and Cuba. He spent several days in Boston, visiting private estates, the park system, Arnold arboretum, etc. After visiting the west and the Pacific coast, he will go to China and Japan before returning home. The seed house of W. Pfitzer is one of the most noted on the European continent and many fine bulb and plant novelties have originated there.

The garden committee of the Massachusetts Horticultural Society visited "The Moorings," the new 300-acre estate of Col. H. E. Converse, Marion, Mass., where D. F. Roy has charge, June 21. This estate is entered for the Hunnewell triennial premium. A fine range of glass is being erected at present. June 24 the peony collection of James McKissock, of West Newton, which includes several hundred varieties, was inspected.

David Welch, of the firm of Welch Bros., has gone to Europe for a change. Patrick Welch will visit Old Orchard Beach, Me., his favorite stamping ground, later.

The local delegation to the Cincinnati S. A. F. convention promises to be rather small. Several who usually attend will not be able to make the journey in August.

One of the finest roses for massing now blooming in the Boston park system is Rosa rugosa repens alba.

W. N. Craig.

PROVIDENCE, R. I.

Trade Conditions.

During the last week the florists were on the jump on account of the large number of graduations. Between forty and fifty different schools, public and private, held their closing exercises last week, and it is estimated that nearly 850 youths and misses were members of the classes. It will be seen that an average of but one floral tribute to each pupil would make a good aggregate, but many instances occurred wherein the child had as many as half a dozen pieces.

But the season's work is done, and now funeral work, with an occasional function at long intervals, will be all there will be to keep the stores busy. Outdoor work, however, continues brisk and the greenhouse men had plenty in view to preclude all ideas of idle hours. The excessive heat of the week, when the thermometer registered well up in the 80's for five days and nights, made field work almost out of the question.

EVERY now and then a well-pleased reader speaks the word which is the means of bringing a new advertiser to

Rose Exhibition.

The annual June exhibition of roses and strawberries by the Rhode Island Horticultural Society, held on the afternoon and evening of June 23 in Arnold hall, was not up to the usual showing. The weather conditions detracted somewhat from the standard of the exhibition, but it also lacked variety and number of entries. Few recognized growers were represented and little interest was manifested. It has been apparent for some time that an infusion of new blood, energy and liberality was necessary to

bring the exhibitions of the society up to the standard it enjoyed a few years ago.

The advent of hot weather was disastrous to the keeping of cut blooms on the benches, few retaining their freshness in the warm hall, while the heavy shower about daylight on the morning of the show spoiled many buds and blossoms that had been singled out for the exhibition. Strawberries were at their best, although the showing was limited.

The exhibition was benched as artistically as could have been expected with the stock they had, by the exhibition committee, consisting of Alexander Macrae, William Appleton, John A. Macrae and William Hill, who are all commercial growers, and three amateurs.

Club Meeting.

"Carpet Bedding" was the subject of the paper read by William Appleton at the regular monthly meeting of the Florists' and Gardeners' Club of Rhode Island, which was held in its rooms June 21. The meeting was well attended. President Charles Macnair was in the chair. Several begonias were exhibited and a general discussion followed upon the different varieties and the methods of growing. Mr. Appleton illustrated his talk with a number of diagrams that proved both interesting and instructive.

An invitation was extended by James Hockey to the members of the club to visit his greenhouses at Pawtucket. The invitation was accepted and the visit will be made in the near future.

President Macnair appointed the following committee to make arrangements for the annual outing: James Dillon, Eugene A. Appleton, James Hockey, Charles S. Macnair and Alexander Macrae.

Various Notes.

Thomas Curley, caretaker of the state house grounds, reported a few days ago to the police that boys had broken down a portion of the hedge. A young man was arrested and fined $10 and costs for the depredation.

A first dividend of three per cent has been declared by Referee in Bankruptcy Chester W. Barrows in the case of M. Butler & Son, of Newport.

John A. Macrae will erect another greenhouse, 18x120 feet, on his property at 1246 Smith street. This is one of the houses that he purchased last fall from the Richard Dunbar range, at Bristol.

A number of the friends of Neil Ward, who is to leave Lonsdale in a few days for Scotland, paid him a surprise visit on the evening of June 24, at his home, and presented him with a gold watch charm, suitably inscribed.

Alexander H. Johnson, of Johnson & Son, was in camp with the State's National Guard at Fort Grebel last week. He is major of the first battalion of the First District Coast Artillery.

Johnston Bros. are receiving the surplus from William Jurgens, of Newport, of a new pink rose similar to Killarney, but unnamed.

John G. Jensen is about to add to his range, at the corner of Broad street and Fifield avenue, two houses, one 18x58 and the other 45x150.

Joseph Kopelman is cutting several thousand sweet peas daily. This is the first crop that he has taken from his new farm, which he purchased some months ago at Oaklawn.

William H. Tarbox, the "Dahlia King" of East Greenwich, has been drawn for jury duty in the Superior Court. W. H. M.

JOHNSTOWN, PA.

There are about 120,000 feet of glass in and about this city, divided among four florists, which seems an excessive proportion for the population, now about 75,000. Twenty years ago the disastrous flood reduced the population to about 5,000 or 6,000, so there has been a remarkably rapid increase since then.

Some wholesaling has to be done and our only outlet is the wholesale houses in Pittsburg, nearly 100 miles away. Even this is sometimes a relief, when we have difficulty in disposing of surplus stock. The low price of coal is quite an inducement for greenhouse men here.

Decoration day business was good here, considerably better than last year. Good stock became extremely scarce on the Saturday preceding the great day. All the florists were satisfied with the amount of business done. E. FRYER.

BIG RAPIDS, MICH.—Charles M. Buskirk is building an addition to his greenhouses.

Niessen's News Column

OF INTEREST TO

Cut Flower Buyers

At this season of the year it is not always an easy matter to get good stock to fill all orders—the quantity is not lacking, but very often the quality. We realize these facts, and with the co-operation of our growers have made preparations accordingly.

You will find with us during the summer months—and that is a fact at all times of the season—the best of everything the market affords. If you place an order with us you can rest assured it is going to be right when you get it, and that means the price, quality and delivery. If you can suggest a way in which we can improve our service, we shall be grateful to you. We are always open to criticism and never too busy to tell you about the good things that we have to offer.

requiring really choice stock of summer roses can secure it on short notice by wiring or phoning us. We have eastern grown **American Beauties,** flowers of size, substance and color that bear ample testimony to the fact that they like the climate. We have **Kaiserins** of extraordinary size and substance grown under the same favorable conditions; and for decorative effects we have fine cut **Easter Lilies** from cold storage bulbs. Add to this that we know how to pack and that we are hustlers. We leave the rest to you.

PHILADELPHIA.

The Rising Eastern Market.

The intense heat of the last seven days of June has had its effect on the cut flower market. Many flowers have arrived too open for sale, and many more so badly bleached as to be useless. The stock of good quality met with a fair demand, the last of the June weddings and a few of the smaller commencements requiring choice stock. There also was an excellent shipping demand in moderate quantities. It is difficult to give a fair idea of prices from a grower's standpoint, because the quantities rejected and unsold figure so largely in the returns. The price list published this week will give an accurate idea of values from a buyer's standpoint, as accurate as possible under the circumstances. The feature of the market was the demand for Beauties, bringing out strongly that this is considered the best summer rose for decorative effects. This demand it was difficult to satisfy. The down eastern supply was limited, the local knocked out. Kaiserin, Killarney and My Maryland, the latter coming rapidly to the front as a hot weather rose, were the other mainstays. Bride and Maid are apt to be poor. Richmond opens too fast. Liberty is obtainable only in small quantities, while Jardine is rarely seen.

The disappearance of the played-out carnations has improved the average quality of the stock considerably. White stands the heat better than the colors, Lieut. Peary bearing as bold a front as any other white variety. Among the colored sorts, Enchantress and Winsor appear at their best.

Sweet peas came in a perfect avalanche June 24, continuing since. While much prized for the weddings and commencements, the number needed was far, far below the number received; $3 a thousand was perhaps an average price for good stock, though choice lots brought more; yet $3 a thousand will seem an absurd quotation to growers who sent in ten-thousand lots with probably a majority of them unsold.

Cattleyas have become much more plentiful and prices have receded. Gaskelliana is about the only variety in the market. Gardenias from the south are over. Peonies from cold storage are so much less plentiful that they cannot be depended upon except in special cases; much of the stock was cut during the wet weather, giving it a washed-out appearance, most undesirable. Easter lilies from cold storage are plentiful, but the demand is erratic. The valley market has fallen off badly. Iris is good and plentiful. There are quantities of outdoor flowers selling at moderate prices. Greens are dull.

The Improvements at North Wales.

The statement appearing in the Review of June 24, that the mammoth greenhouse now in course of erection at the Florex Gardens would be devoted to tomatoes during next season, aroused such widespread interest that the most progressive paper dispatched its Philadelphia representative to the scene of action to learn the full particulars. The Review's enterprise was rewarded by an appointment with the president of the company on the very last day before his departure for the "land of the midnight sun," where, as he humorously expressed it, he would try to learn where to secure twenty-four consecutive hours of daylight in order to have all modern improvements at North Wales.

Mr. Fuerstenberg talked agreeably of his plans now in course of completion; all were what Mr. Bernheimer called twentieth century ideas, most interesting and instructive. The reasons for devoting the largest house in this section of the country to tomatoes were briefly and clearly given: This is the year to build, material is of moderate price and good labor is available; therefore, instead of erecting half of the house this season and the other half next spring, in time for planting all Beauties, the whole house will be pushed through by November, it is hoped. This will give time for planting tomatoes with a prospect of securing the best results. When the tomatoes have flowered and fruited, the

Beauties will follow. The secretary of the company, Mr. Geiger, has kindly furnished the following data of the many improvements now in progress:

The first job was to add two houses, each 32x100, to the carnation range, making those houses now 32x400 feet each, holding 25,000 plants. Then, on the north side, were added two houses for propagating purposes, 10x236, in which was built a concrete bench on each side.

The boiler house was increased from 50 feet to 100 feet, and a marine boiler of 250 horse-power is ready for installation. Near the boiler house is now being dug a deep cistern, twenty feet wide, sixty feet long and thirteen feet deep, to be made of reinforced concrete and to hold over 100,000 gallons of liquids for manuring the beds. This material will be agitated by a compressor forcing air at a high pressure through 1/16-inch holes, in a series of 1-inch pipes laid near the bottom, and it will be pumped through all the houses through the water mains. To kill all germs and make it odorless, the materials are cooked in a high pressure steam retort and delivered into the tank in a jelly form. This tank is to be covered with a brick house. An engine has been installed for cutting pipes and doing electric lighting.

A vacuum system of heating will be introduced at once, the steam being carried to the distant points at forty pounds' pressure and then reduced to a minimum of one pound or a maximum of five pounds of pressure and drawn back to a vacuum pump and delivered to the boilers. The system is so arranged that the present gravity system, which worked well the last two seasons, can be also used in case of breakdown. The carnation range is to be heated from the waste steam of the pumps and a low pressure service of one pound.

Adjoining the office building are three new cooling rooms, now nearing completion. The lower room is partly in the ground, made of reinforced concrete, with a ceiling of the same material. This room is 18x60 and is intended for carnations. On top of this room are built two rooms opening directly from the packing room, each room 18x20, the

Mention The Review when you write.

walls being of solid brick lined with hollow brick, on which is first placed a ½-inch coat of Portland cement with a waterproof compound mixed in it. On this is put a casing of 2-inch compressed sheet cork, finished with a top coat of ½-inch Portland cement, as before. The ceiling is made of double boarding, with paper between and a filling of 8-inch granulated cork, packed solid. The cooling is done by two bunkers of the form which has proved so satisfactory at Edgely, and each can hold three tons of ice. It is estimated that two tons weekly will cool each room in the hottest weather and give ice for packing.

Adjoining the cooling rooms, but separated by a 4-foot passage, will be built a corridor or connecting house, of the new King type, forty feet wide, joining the office department with the present large house and also with the one now going up and with all future houses. It will be possible then to go over the entire plant without going outdoors, except for a reach of twenty-five feet to the carnation range.

The water supply is also getting some attention. A dam is being built to feed the manure tank with gravity supply and, in case of failure of the stream in hot weather, an artesian well is to be sunk adjoining the tank, to use a fine spring struck there. The present dam is to be deepened to hold 2,500,000 gallons of water, to be drawn on in dry times, for forcing water through the houses. There will be no tank on a tower.

The house now going up will be 172x 700, covering about three acres. It will be thirty-six feet high. Four carloads of pipe were required for the heating and purlin construction and another carload for the trusses. In other words, eleven miles of pipe will be used for the heating alone, and twelve miles for the roof frame. Six cars of glass, of 500 boxes each, will be needed, the glass being machine made, 16x24, laid the 24-inch way. Three full cars of millwork are delivered, of which over 4,000 bars will be required for the roof. The small parts of the ironwork will likely reach the 100,000 mark. All heating will be done from the roof, sixteen inches from the glass. The house will be laid out next season, possibly in narrow beds for roses, and will contain six miles of beds.

Various Notes.

The firm and employees of Pennock Bros. gave a dinner at Boothby's Saturday, June 26, in honor of William Falck, who has been for many years in charge of their greenhouse. Mr. Falck has resigned his position and will sail for Copenhagen, Denmark, July 3. Those present were Charles Baxter, Andrew McBride, A. B. Cartledge, A. B. Cartledge, Jr., Wm. W. Crawford, Samuel Dunlop, Chas. H. Green, Chas. W. Kahlert, Ira Keene, Raymond Kester, Anthony Machold, J. Liddon Pennock, Wm. Poulette, Benjamin Starkey.

John Westcott gave the opening entertainment of the Waretown Rod and Gun Club at Waretown, on Barnegat Bay, June 25 and 26. As a local scribe expressed it, you had to have an invitation to go, but when you got there it was all right. The Commodore's guests included George Anderson, Lewis Burke, H. B. Beatty, George Craig, Robert Craig, James Dean, J. W. Denham, D. C. Donohue, Chas. F. Eimerman, Wm. Graham, Wm. K. Harris, Robert Kift, Dr. Lane, Edwin Lonsdale, David Rust, William J. Stuart, G. C. Watson and William Westcott. They had a jolly good time and presented the genial Commodore with a handsome writing desk and writing paper stamped with the club's monogram.

R. O. King, of North Tonawanda, N. Y., paid a flying visit to this city last week.

H. H. Battles used 1,400 peonies in a handsome wedding decoration at Camp Hill, Montgomery county, last week.

Julius Roehrs, Jr., Rutherford, N. J., paid a flying visit to this city recently.

The firm of Lilley & Upton has dissolved partnership, Edgar Upton retiring.

Handles All Stock in Season

At Chicago Market Rate

48-50 Wabash Avenue, CHICAGO

LONG DISTANCE PHONE, CENTRAL 466.

The business will be continued by Samuel F. Lilley.

Charles E. Meehan and family moved to their cottage at Ocean City, N. J., June 25.

F. T. Way & Bro., of Kennett Square, will add two houses, about 30x200 each, Lord & Burnham material, this season.

The Robert Craig Co. has had the largest June business in the history of the establishment. Lorraine begonias at the Forty-ninth and Market street place are wonderfully fine. Their houses at Norwood are nearly ready for planting pot grown carnations.

Monday, July 5, will be generally observed as a holiday in this city. Some of the wholesale houses will be open early in the morning, just long enough to receive and send out stock. The seed and supply houses will be closed all day.

S. S. Pennock took his family to Ocean City, N. J., June 30, to spend the summer.

Wm. J. Baker has been enjoying a brief vacation, the first in a long time.

Sporting Extra.

The baseball team of the Robert Craig Co. will be happy to meet all comers on the diamond, be they amateurs or semi-professionals, on any Saturday afternoon in July or August. Address Robert A. Craig, Forty-ninth and Market streets, West Philadelphia. PHIL.

THE BAYERSDORFER DECISION.

Several weeks ago the REVIEW reported the conclusion of a test case brought by Bayersdorfer & Co. against the United States government to determine the legal rate of duty on certain florists' supplies which Bayersdorfer and others are importing. The Treasury Department has now got around to publishing the decision for the information and guidance of customs officers. Judge Holland said:

"This is an appeal by the importers from a decision of the Board of General Appraisers affirming the classification of the collector in respect to a large and varied assortment of imported ornamental florists' supplies, as follows: Ruscus grun, areca blatter, cycas leaves, magnolia wreath, ilex wreath, ruscus cross, tull leaf, adiantum fern, ruscus wreath, phœnix leaves, leaves in form of cross, palm-leaf wreath.

"The appraiser at the port of Philadelphia returned these importations as 'ornamental leaves,' and the collector classified them as such and assessed a duty on each one of fifty per cent ad valorem, under paragraph 425 of the tariff act, following the decision of Judge Hazel, in Kreshower v. United States (152 Fed. Rep., 485; T. D. 27826), and this classification and assessment was affirmed by the Board of General Appraisers. For the reasons stated by the latter, the decision of the Board is affirmed.

"The same importer has appealed from the decision of the Board of General Appraisers in its affirmance of the collector in classifying statice wreaths under paragraph 251 of the tariff act as 'natural flowers * * * preserved or fresh,' and assessing a duty of twenty-five per cent ad valorem in accordance with the provision of this paragraph. This exhibit has all the appearance of 'natural flowers * * * preserved,' and we think that the classification and assessment of the Board should be affirmed, and it is so ordered.

"The classification of the grasses of the same importer under paragraph 425 of the tariff act and an assessment of fifty per cent ad valorem thereunder by the collector, which was affirmed by the Board of General Appraisers, we have concluded is erroneous. An inspection of this importation convinces us that they are more properly classified as manufactures of grasses, dutiable at thirty per cent ad valorem under paragraph 449. The language in paragraph 425, levying a duty on 'artificial grains, leaves or flowers,' does not as specifically describe this article as the terms re-

ferred to in paragraph 449. The assessment should therefore be thirty per cent ad valorem under this paragraph. The decision of the Board as to the classification and assessment of this importation is reversed.''

PITTSBURG.

The Market.

There is nothing out of the ordinary in the way of business to report; things are moving along much the same as in any other June in the last few years.

The weather has been extremely hot, with severe thunder showers, and stock is getting worse all the time, so that by July 1 there will not be a great deal of fancy stock to be had.

The employees of the wholesale houses are beginning to disappear on their vacations, and this, with a street car strike to make deliveries inconvenient, gives those who are on duty plenty of work.

A few asters have made their appearance, but are not noticed, as carnations are still pretty good.

Various Notes.

The committee having charge of the florists' picnic has about completed arrangements and will announce the date in a few days.

W. Q. Potter, of the McCallum Co., and Miss Davies, of Hazelwood, were married last Thursday evening and left for Greene county, the old home of Mr. Potter. This is more of the work of that matrimonial bug, whose bite causes people to do funny stunts, as Mr. Potter did not tell his best friends, either before or after the event, but just let them find it out the best they could. And the worst of it is, there is likely to be more to follow in the same firm. Hoo-Hoo.

NEW ORLEANS.

On Gentilly avenue there are several growers of chrysanthemums, some using greenhouses and others being satisfied with the open field, covering them in time with cotton cloth or sashes. Xavier Grillot has a large patch of them. He has under culture about ten acres of vegetables, growing nicely in a rich, loamy soil. His father was for a long time a large grower of dahlias; this was before the time of the large mums. There is still a good sale for dahlias at All Saints' day, and the culture of that flower should not be entirely disregarded. X. Grillot has given up the Holtz variety of mum for the Mrs. Robinson, which is certainly much superior. His plants have been set out rather early and he is experiencing some trouble with disbudding, but no doubt they will be put in good shape in due time.

The weather keeps quite favorable for the growing of that important crop.

M. M. L.

WAYSIDE NOTES.

Laub & Wilson is the title of the successors to the old firm of Adam Laub & Son, at Hughsonville, N. Y. Mr. Wilson is a son-in-law of Adam Laub, Sr., who steps down, after thirty-five years of good work, to give the boys an opportunity to prosper as he has done.

Mark Aitken, of Springfield, Mass., took advantage of the lull following the spring rush to hie himself to Maine for a short fishing trip. He took his clever grower, Morgan, along, and it is safe to say that the pair will make havoc among the finny tribe 'way down east.

Wm. Schlatter & Son, of Springfield, Mass., are clearing ground for three houses, each 25x100, which will give them a full block of up-to-date buildings.

J. W. Adams & Co., of Springfield, Mass., report an excellent season in the nursery branch and note an increasing demand for the choice varieties of shrubbery. They intend adding one house, 40x90, for storage purposes. The cut flower branch is increasing.

L. D. Robinson, Jr., of Springfield, Mass., forces and successfully disposes of an immense quantity of bulbous stock. Many out-of-town retailers depend upon him for their supply.

N. F. Higgins, of Springfield, Mass., notes an increasing demand for orchids and was one of the first to introduce this

Log Mosses

Natural and Perpetuated

Special prices for quantity lots for future delivery.

E. A. BEAVEN, Evergreen, Ala.

Mention The Review when you write.

indispensable flower to his better class of customers.

Osterman & Steele, of Springfield, Mass., are looking for a desirable location, with a view to building an up-to-date range of glass to supply their increasing business.

Frank Burfitt, at Chicopee Falls, Mass., is favorably located to catch a share of the retail trade in both cities, and in addition disposes of much of his well grown stock at wholesale.

J. M. Ward & Co., Peabody, Mass., say they have been working full time, which, in the language of this hustling town, means plenty of business and ample stock. They were potting up a fine lot of cyclamens into 5-inch pots at the time of my visit, for Christmas trade.

Wm. T. Walke, of Salem, Mass., says he will bank on giganteums for his Easter crop of lilies. He grows large numbers and makes this a specialty.

William White, gardener to Winthrop Ames, at North Easton, Mass., has a grand variety of the oriental poppy, Papaver Parkmanni, a beautiful deep scarlet, which is the gem of the species.

George E. Buxton, of Nashua, N. H., has a batch of seedling carnations which are full of promise. One or two have made their appearance in the Hub market and are much sought after.

Otto Keser and family, of Portland, Conn., were extremely busy with funeral work at the time of my visit. The young folks bid fair to follow in their leader's footsteps and perpetuate the name of Keser as king of floral artists. The use of tinfoil has been discarded here and many of our best designers are following suit, owing to its increased cost.

F. J. Bixby, of Manchester, N. H., is suffering from the latest malady, being

poisoned by the brown tailed moth, and says it beats Primula obconica every time, the irritation at times being almost unbearable. Fortunately, it did not happen during the busy season, which this year was busier than ever.

E. W. Pearson, of Newburyport, Mass., has the sympathy of his friends in the serious illness of a daughter, who has been one of his first lieutenants in the business. It is hoped she may speedily recover.

C. H. Kaulbach, of Haverhill, Mass., reports good business, with wedding decorations on the increase, and an abundance of stock enables him to take good care of all that comes his way.

Artist Stanley Murtfeldt, of the Yuess Gardens Co., Newburgh, N. Y., has been putting in his best work of late with some fine pieces for the funerals of some prominent citizens. M.

DETROIT.

The Market.

A week of extremely hot weather has caused the vacation germ to infect seemingly the whole population. With the exception of some funeral work and a few late weddings, there is nothing doing now. There never was such a piling up of stock, especially carnations, as at present. Thousands of carnations come in daily, with no outlet.

The warm weather has also flooded the market with sweet peas and, of course, peonies. Of the latter, it is only the white and delicate pink that are not equal to the call.

Roses, so far, have been selling out fairly well. Still, some are going to waste, and a few more days of the present heat will put the roses in the same class with other stock.

Michigan fancy ferns are arriving in large shipments, bringing the price within reach of all. Although already well along in the season, boxwoods and small bays are still selling nicely.

Various Notes.

A young colored lad, in the employ of E. A. Fetters, was struck by an auto Thursday, June 24, and a number of boxes of flowers scattered about. It was at first thought the lad was seriously injured, but, fortunately, he only received a few scratches and a bad scare.

Mr. Maebius is now conducting the stand in the Majestic building. The former unreasonable rent has been cut to one-third and, with this continual drain out of the way, he bids fair to make a success of the business.

Robert Watson cleaned up a nice little wad this spring. Were it not that his stock of bedding plants was used up, he would still be filling orders. He says the last season has been the best ever.

H. S.

MACON, GA.—The Idle Hour Nurseries are overhauling their entire plant, using several cars of Louisiana Pecky cypress, ordered through the Foley Mfg. Co., Chicago.

VIRGIN'S VENTURE.

Uriah J. Virgin, alderman of the city of New Orleans and a leading florist in the Crescent City, is exploiting the Virgin Development Co., just organized with a capital stock of $20,000, to engage in the oil business in the new Caddo oil field, near Shreveport, La. Mr. Virgin states that the company has secured land within the proven territory of the oil belt, being not more than three-eighths of a mile from one of the greatest wells in the field. He states that the company has purchased and paid cash for the property and will commence operations within the next month. Mr. Virgin's many friends in the trade hope he may become a second Rockefeller.

NEW BEDFORD, MASS.

The Market.

Trade remains about the same as usual. Flowers are quite plentiful. Carnations retail at 35 cents per dozen. Roses are $1 to $1.50 per dozen, retail. A few outdoor sweet peas are now coming in; they retail at 50 cents per hundred blooms. Some nice gladioli are now to be seen. Funeral work is good, using up lots of the surplus stock. Wedding orders are also rather numerous.

Outdoor roses are now in full bloom. The weather last week was fearfully hot and dry. Young carnation stock in the field is looking fairly well. The bedding-out season is about over now; it has been a prosperous season, with a good demand.

Various Notes.

E. H. Chamberlain had some nice gladiolus blooms last Saturday.

Early closing is the general rule among the uptown florists.

The Providence Spraying Co. is doing extensive work in this city, spraying and caring for trees. The firm is advertising a great deal in the local papers. Wm. S. Brown, the florist, says he has a better apparatus and system than this company, however. It is good work that is being done, and work which is much needed.

William Livesey is busy potting up smilax. He expects to have about 10,000 of them ready for the trade in July.

W. L.

STOKESIA CYANEA.

Within the last few years the fine flower known as Stokes' aster, Stokesia cyanea, has assumed greater importance in the eyes of the cultivator of hardy flowers, inasmuch as it has become recognized that there are really two varieties which flower at different seasons. This variety of stokesia has long been known, and has been rather largely cultivated in certain districts for the sake of its flowers. In most places it was found that the blooms were too late in expanding, and that in few seasons was it possible to have it in flower before the buds were pinched by early frosts, so that it was necessary to cultivate it finally under glass to induce it to open its handsome blossoms. Keen exhibitors of hardy flowers at shows in the north of England were therefore in the habit of cultivating the stokesia in pots plunged in the open in summer, and taken into a greenhouse in July, so as to forward the flowers and induce them to open in August or September, as the case might be.

While this might serve the purpose of the exhibitor, it was profoundly unsatisfactory for the cultivator of hardy plants in the open, and the result was that the cultivation of Stokesia cyanea was gradually declining, save in the south.

Fortunately, however, an early-flowering variety, which has been called Stokesia cyanea præcox, has come to be known, and a fresh popularity has been achieved by Stokes' aster, so-called because of its resemblance to the perennial asters. By securing it, the difficulty of having this flower in bloom, even in northern gardens, has been entirely overcome. It will flower in July in the south, and in August and early September in the north, so that it should rapidly make its way into gardens where it has not yet found a place.

Stokes' aster is a handsome plant, growing about two feet high, the early variety being rather dwarfer, and giving its fine lavender-blue flowers, each about three or four inches across, in considerable numbers. Aster-like in form, they are fine for the border, for cutting or for exhibition purposes.

To do justice to this handsome plant it should have a good, but not too heavy soil, well manured with old cowhouse stable manure, and deeply dug, while the situation ought to be an open and sunny one. As a pot plant for the conservatory, the Gardeners' Magazine says the late-flowering variety is excellent, treated as are many late-flowering plants by growing it in pots plunged in ashes in the open during summer, taken indoors when about to flower (before danger from frosts appears), and bloomed in a light house. After the flowering is past, the pots may be placed in a coldframe until spring comes round, when they should be plunged in ashes in the open until required again. Plants are increased by division, but seeds may be obtained in the usual way.

In addition to the two lavender-blue varieties, there is a variety of S. cyanea præcox which has white flowers, and which is becoming appreciated by growers of hardy flowers.

The Review sends Scott's Florists' Manual postpaid for $5.

Please discontinue my advertisements in the Review, as I am about sold out. Your paper certainly sells the stuff.—G. E. Fink, Roselle, N. J.

Enclosed you will find a check for the renewal of my subscription to the Review. I let it run out a few weeks ago and I have missed the paper very much. I think it is the best trade paper published.—H. C. Holmes, Morristown, N. J.

CINCINNATI.

The Market.

We are in the midst of summer now, and it is summer good and proper. The temperature has reached close to 90 degrees in the shade during the last few days, and at present there are no signs of a let-up. It is easy to imagine what this is doing to the flower business. It is discouraging to see the roses pop right open and drop almost while you are looking at them, and they have to be sold immediately, for they are of no account the second day. The hot weather has put a decided check on business, as might be expected. As a consequence, there is a large percentage of the stock received that finds its way into the dump. Only the best roses sell and there is little chance for the short ones. Beauties hold their own better than anything else and bring a better price. Carnations sell fairly well, but at a low figure. Sweet peas are coming by the thousands and it is hard to move them at anything like a fair price. Feverfew and candytuft can be had in unlimited quantities and at your own price. Lilies are good property and bring a good price, but that is because there are only a few of them.

The S. A. F. Convention.

As has been stated before, the meeting place where the business meetings during the S. A. F. convention will be held is in the Odeon. This is a small theater, located about 100 feet south of the entrance of the exhibition hall, and it is an ideal place for the purpose. The Odeon is a part of the Cincinnati College of Music building and is of sufficient size to easily take care of the crowds we expect to be present. And, best of all, it will be cool there even on the hottest days.

William Murphy is busy answering correspondence and allotting space for the coming convention. Do not delay getting into communication with him if you intend to make an exhibit. The charges for space this year are cheaper than ever before and it ought to encourage exhibitors to show their wares. Remember, also, that Cincinnati's central location is going to draw hundreds of florists who

have never before attended a national florists' convention and every one of them is a buyer of various kinds of florists' supplies, plants, etc. This is going to be the one chance to reach them all. It is absolutely certain that we will have the greatest trade exhibit ever held, and no one who has any wish to increase his business can afford to remain away.

C. E. Critchell reports having received several entries for the bowling contests, but there are many who have not yet been heard from. Do not overlook this matter, as by sending in your application at once you will be doing a favor to the Cincinnati committee, the members of which are doing their best to make everything pleasant for you during your stay in this city.

The souvenir book will soon be in the printers' hands. From all reports, it will be a work of art and something that every florist will want to have and to keep. The work on this book will be pushed through now with all speed, so that it can be mailed out as soon as possible.

Various Notes.

C. E. Critchell has completed his new ice-box and now is well fixed for cold storage. It is a great improvement over the old one.

Miss Cora Pherson, bookkeeper at William Murphy's, is away on her vacation.

E. G. Gillett is receiving some fine Beauties from Heller Bros., New Castle, Ind. He is also receiving My Maryland

The American Seed Trade Associati

Seed Trade News.

AMERICAN SEED TRADE ASSOCIATION.

Pres., J. C. Robinson, Waterloo, Neb.; First Vice-pres., M. H. Duryea, New York; Sec'y and Treas., C. E. Kendel, Cleveland, O.

GRASS SEED ASSOCIATION.

The Wholesale Grass Seed Dealers' Association was organized at Niagara Falls last week.

The following were elected as its first board of directors: Charles D. Boyles, of the Albert Dickinson Co., Chicago, Ill.; Henry W. Wood, of T. W. Wood & Sons, Richmond, Va.; M. H. Duryea, of Henry Nungesser & Co., New York city; Robert Pommer, of D. I. Bushnell & Co., St. Louis, Mo.; Charles Dickinson, of the Albert Dickinson Co., Chicago, Ill.; C. F. Wood, of Wood, Stubbs & Co., Louisville, Ky.; Jos. L. Peppard, of J. G. Peppard, Kansas City, Mo., and Albert McCullough, of J. M. McCullough Sons Co., Cincinnati, Ohio.

The board organized by electing Albert McCullough president, C. F. Wood secretary-treasurer and M. H. Duryea vice-president.

PRESIDENT ROBINSON.

J. C. Robinson, who was last week elected president of the American Seed Trade Association, like so many good men in the seed business, is a native of Washington county, New York. He removed to Waterloo, Neb., about twenty-three years ago and taught school for a time. In 1888 he made his start as a grower of vine seeds, sweet corn and field corns for the wholesale trade, and two years later he became a member of the Seed Trade Association. From the day of the beginning of his business career, the Robinson interests have steadily expanded. Incorporation followed in 1904, L. S. Gould being associated with Mr. Robinson and being vice-president of the company, of which Mr. Robinson is president. At the present time the business of the company is probably the largest of its kind in this country, and that is equivalent to saying the largest of its kind in the seed trade of the world.

J. C. Robinson.
(President of the American Seed Trade Association.)

When Mr. Robinson began, the cleaning apparatus employed was the old-fashioned fanning mill, operated by hand power. Now the plant consists of five large warehouses, in which is installed the most modern conveying and cleaning machinery.

Personally, Mr. Robinson is a most engaging gentleman. His personal acquaintance includes practically every seedsman in the country, and there are few more popular men in the trade. At home he is known as a man of public spirit, being associated with every cause that tends to the welfare and advancement of his community. Mr. Robinson

n at Niagara Falls, Ont., June 22, 1909.

always has taken an active part in the affairs of the Seed Trade Association, last year being first vice-president and a member of the committee on postal laws. His home is farther west than that of any other man who has heretofore been called to the presidency of this association, but he will bring to the office an energy and a view from a fresh point, which will go far toward making the year one of the most successful in the history of the association, which in the last few years has grown to have an organization with which it can be a real power in influencing any factor bearing on trade matters.

THE FIRST-VICE.

Marshall H. Duryea's specialty is being vice-president. In some places a vice-presidency is an honorary office, but the vice-presidencies Mr. Duryea holds are no sinecures. He is vice-president and treasurer of Henry Nungesser & Co., New York grass seed dealers, with world-wide connections, and in 1907 he was elected first vice-president of the American Seed Trade Association. The accompanying illustration is from a snapshop of Mr. Duryea taken on the roof garden of the Hotel Astor, New York, the day of that election. It will be noted that Mr. Duryea had taken a position almost directly underneath a ladder, which superstition says is an unlucky thing to do; so it seemed in his case, for the next year he was set back a notch, to the second vice-presidency. By dint of close application and careful attention to duties, he has now been restored to his original position—not beneath the ladder, but in the first vice-presidency. Then, too, when it came to the organization of the New Wholesale Grass Seed Dealers' Association, who would be just the man for vice-president; why, Mr. Duryea, of course—and so it was.

It was largely due to Mr. Duryea's efforts during the past business season, that the seed trade in New York escaped inimical legislation at Albany. The seed trade in New York city and the east looks to him for leadership in any matters concerning general trade interests.

Marshall H. Duryea.
(Vice-president of the American Seed Trade Association.)

NIAGARA FALLS CONVENTION.

[A full report of the convention up to the closing session was printed in the Review for June 24.]

The Concluding Session.

The American Seed Trade Association, in twenty-seventh annual convention at Niagara Falls last week, at the closing session on Thursday morning heard the brief report of the tariff committee, presented by its chairman, J. C. Vaughan. The facts had previously been covered in the address of President Woodruff, published last week.

Recognizing the efficient services of Secretary-Treasurer Kendel and his manifold duties, he was voted an increase of salary of $100.

Announcement was made by Albert McCullough of the formation of a new organization in no way antagonistic to the parent organization, to include the wholesale grass seed dealers. Mr. McCullough wished it clearly understood

that the new association would in no way detract from the weight or influence of the parent organization.

Officers Elected.

Officers were elected as follows:

President—J. C. Robinson, Waterloo, Neb.

First Vice-president—M. H. Duryea, New York.

Second Vice-president—F. W. Bolgiano, Washington, D. C.

Secretary-Treasurer—C. E. Kendel, Cleveland, O.

Assistant Secretary—Leonard H. Vaughan, Chicago.

Executive Committee—W. S. Woodruff, Orange, Conn.; Geo. S. Green, Chicago; Alex. Forbes, New York; C. N. Page, Des Moines, Iowa; S. F. Willard, Wethersfield, Conn.

Membership Committee—Albert McCullough, Cincinnati; E. L. Page, Greene, N. Y.; J. C. Vaughan, Chicago.

Place of Meeting.

In accordance with custom, no city was voted on, but invitations were read from Atlantic City, Denver, Niagara Falls, Ont., and Saratoga, as 1910 convention cities. An informal ballot showed a majority favoring Atlantic City, but the matter is referred to the executive committee.

Mr. Coy Honored.

S. F. Willard, of Wethersfield, Conn., an ex-president and also ex-member of the Connecticut legislature, proposed the name for honorary membership of E. L. Coy, of Melrose, Mass., formerly of New York state, to whom he referred as a veteran seed grower well known to most of the membership, whose long and honorable record in the seed business renders him highly deserving of such an honor. The nomination was seconded by F. W. Bolgiano, of Washington, approved by President Woodruff, as required under the rules, and agreed to by a unanimous vote.

Committee on Conference.

On motion a joint committee, to be composed of the chairmen of the committees on tariff and customs, seed legislation and postal laws, was created to confer with similar committees of the Society of American Florists and American Association of Nurserymen on matters of importance and mutual interest. The usual appropriation was voted for the

National Council of Horticulture, to continue its work in the interests of the seed trade. Secretary Kendel spoke in highly complimentary terms of the work that has been done by this organization.

On motion a special vote of thanks was tendered to Mr. McFarland for his elaborately presented lantern slide lecture of the preceding evening. The motion, proposed by W. P. Stokes and seconded by F. C. Woodruff, was carried unanimously.

President Woodruff called attention to the presence of the following ex-presidents in attendance at this convention: J. C. Vaughan, 1892; Albert McCullough, 1890 and 1900; S. E. Briggs, 1895; Jerome B. Rice, 1902; Walter P. Stokes, 1903; S. F. Willard, 1904; Chas. N. Page, 1905; W. H. Grenell, 1906; Henry W. Wood, 1907; Geo. S. Green, 1908; and at his suggestion a group photograph was taken of the foregoing after adjournment of the convention.

Closing Ceremonies.

To Chas. Dickinson was accorded the honor of escorting to the chair the newly-elected president, J. C. Robinson, who responded in a neat speech, which evidenced his full appreciation of the responsibilities of the position and his own willingness to do all in his power to fulfill them properly. In Mr. Robinson the association secures the services of a man of excellent tact, good judgment and kindly nature, who will give it strength, particularly in the section from which he comes. Mr. Robinson felt that his residence west of the Mississippi, though not far from the center of our common country, might make it difficult for him to be in as close touch as he would desire with the eastern membership, and he therefore urged that all members advise him frequently and fully as to the needs of the association. Mr. Robinson's election was unanimous.

As a reward for his attempt to decline the honor of the office of first vice-president, Mr. Duryea was threatened by Mr. Green with being made perpetual vice-president, and Mr. McCullough told him if that was not enough to make him sit

J. PITHER, Ltd.

Established 25 years. **UXBRIDGE, ENGLAND**

Bush Hill Park, Enfield, Middlesex, England, June, 1909.

Dear Sir:

re HUGH LOW & CO., Dissolved

In consequence of the voluntary dissolution of my late firm, I have much pleasure in informing you that I have taken over the Royal Nurseries, with the greater part of the stock. These Nurseries were formed by me in 1881, under the instructions of my late father, and since his death I have taken an active part in the direction of the business. The staff, which is transferred practically intact, includes such well-known men as my representatives, Mr. Harry A. Barnard, Mr. F. W. Ashton and Mr. Laurence J. Cook; Mr. Edward Tack, as orchid specialist and grower, and Mr. M. C. Allwood, the enthusiastic carnation man; Messrs. Moore, Reid and Meades amongst the roses and fruit trees, and Mr. Phillips in the general department. I feel that with such men at my back, clients can rely upon the same care and attention being given to their business as under the old regime.

Esteeming your orders and inquiries, believe me to be always at your service as heretofore.

Obediently yours,
STUART H. LOW.

Please address all communications STUART LOW & CO., Bush Hill Park, Enfield, Middlesex, Eng.

that the new association would in no way detract from the weight or influence of the parent organization.

Officers Elected.

Officers were elected as follows:

President J. C. Robinson, Waterloo, Neb.

First Vice-president M. H. Duryea, New York.

Second Vice-president F. W. Bolgiano, Washington, D. C.

Secretary-Treasurer C. E. Kendel, Cleveland, O.

Assistant Secretary Leonard H. Vaughan, Chicago.

Executive Committee W. S. Woodruff, Orange, Conn.; Geo. S. Green, Chicago; Alex. Forbes, New York; C. N. Page, Des Moines, Iowa; S. F. Willard, Wethersfield, Conn.

Membership Committee—Albert McCullough, Cincinnati; E. L. Page, Greene, N. Y.; J. C. Vaughan, Chicago.

Place of Meeting.

In accordance with custom, no city was voted on, but invitations were read from Atlantic City, Denver, Niagara Falls, Ont., and Saratoga, as 1910 convention cities. An informal ballot showed a majority favoring Atlantic City, but the matter is referred to the executive committee.

Mr. Coy Honored.

S. F. Willard, of Wethersfield, Conn., an ex-president and also ex-member of the Connecticut legislature, proposed the name for honorary membership of E. L. Coy, of Melrose, Mass., formerly of New York state, to whom he referred as a veteran seed grower well known to most of the membership, whose long and honorable record in the seed business renders him highly deserving of such an honor. The nomination was seconded by F. W. Bolgiano, of Washington, approved by President Woodruff, as required under the rules, and agreed to by a unanimous vote.

Committee on Conference.

On motion a joint committee, to be composed of the chairmen of the committees on tariff and customs, seed legislation and postal laws, was created to confer with similar committees of the Society of American Florists and American Association of Nurserymen on matters of importance and mutual interest. The usual appropriation was voted for the National Council of Horticulture, to continue its work in the interests of the seed trade. Secretary Kendel spoke in highly complimentary terms of the work that has been done by this organization.

On motion a special vote of thanks was tendered to Mr. McFarland for his elaborately presented lantern slide lecture of the preceding evening. The motion, proposed by W. P. Stokes and seconded by F. C. Woodruff, was carried unanimously.

President Woodruff called attention to the presence of the following ex-presidents in attendance at this convention: J. C. Vaughan, 1892; Albert McCullough, 1890 and 1900; S. E. Briggs, 1895; Jerome B. Rice, 1902; Walter P. Stokes, 1903; S. F. Willard, 1904; Chas. N. Page, 1905; W. H. Grenell, 1906; Henry W. Wood, 1907; Geo. S. Green, 1908; and at his suggestion a group photograph was taken of the foregoing after adjournment of the convention.

Closing Ceremonies.

To Chas. Dickinson was accorded the honor of escorting to the chair the newly-elected president, J. C. Robinson, who responded in a neat speech, which evidenced his full appreciation of the responsibilities of the position and his own willingness to do all in his power to fulfill them properly. down and stop declining election they would all agree to elect him to the first and second vice-presidencies as long as the association lamp held out to burn, and then Mr. Duryea concluded to say no more but accept.

Immediately after the close of the convention everybody repaired to the ballroom, where Mr. and Mrs. President Woodruff were delighted by C. F. Wood, of Louisville, making presentation in his graceful and happy way of solid silver compotes and bon bon dishes and some beautiful designs of belt buckles with the maple leaves embossed thereon. Mr. Woodruff responded warmly, and the conclusion of this delightful incident marked the close of the convention.

Landreth on Irrigation.

Through inadvertence the name of the chairman was omitted from the committee on irrigation appointed Wednesday under the resolution offered by Capt. Landreth at Tuesday's session. Capt. Landreth was of course named by President Woodruff as chairman of the committee to interest the Department of Agriculture in irrigation tests in the east.

Those Present.

In addition to the list published last week, the following were among those present:

Ball, A. L., of Chilton Printing Co., Philadelphia.
Buffington, John J., of J. J. Buffington & Co., Baltimore, Md.
Cameron, C. E., of Churchill Grain & Seed Co., Toledo, O.
Huggins, M. J., Pierrepont Manor, N. Y.
Lamberd, S. L., of S. L. Lamberd Co., Baltimore.
Leonard, E. S., of Leonard Seed Co., Chicago.
Keeney, C. N., of C. N. Keeney & Son, Le Roy, N. Y.
Rice, W. A., of White's Class Advertising Co., Jerseyville, Ill.
Rogers, E. E., of White's Class Advertising Co., Chicago.
Squires, E. F., Buffalo, N. Y.
Vick, Chas. H., of Jas. Vick's Sons, Rochester, N. Y.
Vick, Fred W., of Vick & Hill Co., Rochester, N. Y.
Watzinger, J., of Conrad Appel, Darmstadt, Germany.

Among those attending the Seed Trade meeting at Niagara Falls, Ont., were the following ladies: Miss Inez Rogers, Mrs. Jerome B. Rice, Mrs. W. C. Langbridge, Mrs. W. F. Jones, Miss Marguerite Rice, Miss Woodruff, Miss Blanche E. Goldsmith, Mesdames F. H. Ebeling, H. A. Sculthorpe, L. H. Archias, J. H. Ford, E. F. Dibble, S. M. Sibley, A. L. Hart, L. L. May, W. T. Phillips, S. F. Willard, M. J. Huggins, W. S. Woodruff, M. L. Hotchkiss, F. C. Woodruff, F. M. Clark, F. S. Platt, H. W. Wood, A. H. Smith, Hazel A. Ross, S. A. Wilson, A. H. Goldsmith, H. T. McCullough, T. A. Barrett.

F. C. Varela, the Teneriffe grower of Bermuda onion seeds, reports that he has found a white variety earlier than any other onion.

J. Watzinger, representing Conrad Appel, Darmstadt, Germany, is visiting the trade in this country and is at Chicago this week. His firm is one of the oldest and largest in Germany exporting grass and tree seeds.

The Springfield Seed Co., Springfield, Mo., held its annual meeting last week, reëlecting its officers: President, R. R. Ricketts; vice-president, L. H. Murray; secretary, A. S. E. Sanders. In the season just closed, the concern extended its territory and increased its gross sales. Mr. Sanders attended the Niagara Falls convention.

C. F. Wood, of Wood, Stubbs & Co., Louisville, visited Chicago en route home from the Niagara Falls convention.

Frank J. King, Toledo, says that the Ohio clover seed prospect still is pretty blue. In Indiana the outlook is better than in Ohio, but still is hardly fair.

F. R. Pierson Co., Tarrytown, N. Y., has advices from Bermuda that the crops of Harrisii bulbs will prove short this year, especially in larger sizes of dependable stock.

The first half-dozen cases of the year's crop of Harrisii lily bulbs arrived at New York June 25. The boat from Bermuda arriving July 2 will have shipments of considerable size.

Jay J. Utter, Bravo, Mich., says melon, cucumber and tomato all are coming on well; onion sets promise a good yield. Beans have just gone into the ground, about half before June 15 and the rest since.

Maurice Denaiffe, with Denaiffe & Fils, Carignan, France, is making a tour of the trade in this country in company with Charles Johnson, of Marietta, Pa., who is the firm's American representative. The gentlemen were in Chicago June 26.

At the instance of the Department of Agriculture, the Treasury Department has issued the annual order directing customs officers to take, label and forward to Washington two-ounce samples of all importations of grass, clover and forage plant seeds. This has been going on for some six or seven years.

CABBAGE.

Deterioration of Types.

[A paper by J. M. Lupton, of Mattituck, N. Y., read at the convention of the American Seed Trade Association, Niagara Falls, Ont., June 22 to 24, 1909.]

I assume that the seedsmen's convention can possess no greater element of

usefulness to the trade than that which results from a better understanding of the nature and character of the plants which seed produces. I notice by the program that the greater part of our information on the present occasion comes from scientific men, and while feeling greatly honored at being given a place among the distinguished gentlemen who are teachers, I must disclaim being a teacher myself. In fact, I entered the freshman cabbage class in 1879 and, after thirty years of reasonably patient study, I have not yet graduated, and worse than all, I have a strong suspicion that I never shall. It is therefore as a student, and not as a teacher, that I shall briefly discuss some of the peculiarities of the cabbage field.

I do not think that varieties of cabbage are peculiarly subject to deterioration. During the period of my observations several varieties of potatoes have come and gone, but the Early Jersey Wakefield cabbage has been the popular early variety during all that period, in

spite of every effort to supplant it. Apparently, those plants which we produce by sowing the seed are much less subject to deterioration than such a plant as the potato, which we produce by planting the tuber, the reason to my mind being fully found in the natural, constant hybridization which occurs at the blossoming period among the seed-producing plants. Now, this constant hybridization—not the intermingling of different varieties with one another, but the intermingling of individual plants of the same variety—appears to me both as a means of deterioration and at the same time as an essential of life in its relationship to what we call types of cabbage.

Natural Deterioration.

We must recognize the fact that each plant is an individual, member of a variety though it be. Each plant possesses a character of its own, a constitution of its own, and seemingly a disposition of its own. Some are healthy and strong, some unhealthy and weak; some are well disposed and perfect types of the variety, while others show vicious tendencies, and the seed produced from any given plant is of course hybridized, through nature's process, by the other plants which grow in its proximity. Without constant vigilance on the part of the grower, this natural mixing of individual plants in the blossoming season becomes a menace and an element of deterioration, but the remedy is extremely simple and well known—we have only to discard the vicious specimens, a matter which depends for practical results far more on the discernment and intelligence of the man behind the hoe than upon the number of plants removed from the field.

Reproducing year after year without any particular care, permitting every plant to bear all the seed it naturally will and harvesting the whole product just as it is reproduced, with the natural process of mingling good and bad together, results in a rapid deterioration of the variety as measured by gardeners' standards. The plants become wild, producing cabbages, but not cabbage heads. The plant, while seemingly it has gained in hardiness and vigor and is in consequence the better able to resist disease, has apparently lost its capacity to produce the head for which it is cultivated and which gives it its value. This, at least, seems to be a natural tendency and might be termed natural deterioration.

Deterioration From Overbreeding.

On the other hand, the seed breeder, seeking by the most patient and painstaking effort to improve his stocks, in making his selection of stock seeds has naturally in mind a given ideal of every variety. The plants which he selects for his planting stock, which of course forms the basis of his strain, are those specimens which in every particular are the nearest approach to the ideal type which he has in mind. Seedsmen, in particular, like to see all the plants grow just alike, but the effort of itself is to a certain extent an effort to destroy the vitality and individuality of the plant, which to my mind is an essential to the life of the variety. Following too blindly the effort to make all grow to a given ideal is apt to result in a weakening of vitality and a lack of the resistant force necessary to combat the plant's natural enemies and the conditions unfavorable to its development.

Lilium Harrisii

Now Ready for Delivery

Our first consignments have just reached us and we are now filling early orders. **Easter comes very early next year, March 27,** and a good many growers will have difficulty in getting Japan Longiflorum in flower in time, and there will be an extra demand for Harrisii in consequence.

In view of the fact that **crop is short,** we advise those who have not already placed order to lose no time doing so. Last year we were not able to meet the demand for our selected Harrisii on late orders, so we urge customers to order without delay. At present we have a good supply still to offer, and will be able to take care of early orders, but there should be no delay in ordering, as there is sure to be a scarcity of good stock, especially in the large sizes.

We offer a selected stock of the original, true Harrisii for early forcing. These bulbs have been grown from the original pure Harrisii, and will be found splendid stock for early forcing, for which purpose Harrisii is so valuable. We have had the stock inspected, and are assured it is almost absolutely pure and almost entirely free from disease. It is not stock picked up indiscriminately from different sources, but is grown from one stock, and will be found very superior to the ordinary Harrisii usually offered, both in regard to freedom from disease and purity, and not the late type now so often furnished.

6/7 inch bulbs, 350 to the case	**$ 6.00 per 100;**	**$ 55.00 per 1000**
7/9 inch bulbs, 200 to the case	**9.00 per 100:**	**85.00 per 1000**
9/11 inch bulbs, 100 to the case	**20.00 per 100;**	**180.00 per 1000**

Full case lots at 1000 rates.

Large Specimen Hydrangeas

Always Mention the Florists' Review when writing advertisers

that the year previous he had sold cabbage seed of a certain variety which had given excellent results and produced perfect crops, some of which he had seen. Carrying over some of the same seed, it was again planted, with an opposite result. Crops failed, and in the view of the average planter it was an entirely different strain of seed from that which had been used the year before, though actually it was not only the same strain but the same lot of seed. Why was this? Being familiar with the variety, I do not hesitate to say that the trouble was due to overbreeding, or selection without proper regard to securing, as a first requisite, the greatest degree of hardiness and vigor in the parent stock. The grower's effort has been to make all the plants look just alike, and in the effort he has weakened their constitution and

No Grower of Vegetables under glass can afford to do without the Wittbold system of

Mention The Review when you write.

natural force of resistance. Grown under favorable circumstances, such a strain appears perfect, but let it be planted under adverse conditions and it cannot succeed, but easily succumbs to any disease to which the plant is subject.

Due Respect to Mother Nature.

The effort, therefore, on the part of the grower to secure perfection must recognize as one of the elements of perfection a strong constitution, and any effort which fails to recognize the fact that each plant is an individual will probably end in failure. We find, therefore, that while Nature seems to have decreed that men may maintain the usefulness of a variety only by means of selection of parent stocks, she seems also to have ruled that such selection shall be made only in conformity with certain rules which she has established and written in the fields for close observers.

In general it may be said that the color of the leaf gives a good indication of the healthfulness and vitality of the plant. I have particularly noticed that every strain bred to a point where vitality has weakened, has a smooth leaf in which a yellowish tinge has replaced the deeper shade which should indicate health and vigor. It is, I think, much easier to breed a smooth-leafed variety to a given point than one which has a blistered or ruffled leaf; the tendency to variation is not so marked in the smooth-leafed variety and its individuality is not so strikingly shown. Among such cabbages the efforts to improve must be largely in the direction of healthfulness. I do not desire to speak of the merits or demerits of different varieties except by way of illustration, but in order to more clearly understand this point I will say that it is some years since we have been able to produce a crop of Stone Mason cabbage on Long Island which would pay expenses at double the price at which it was sold. To my mind, the best strains have been overbred and, while the variety has by no means been lost, the handsomest specimens fail to produce seed, but rot away, apparently from lack of vitality.

Inability to Resist Disease.

Some strains of Danish Ball Head, one of our most popular varieties, have been bred to a point which may be looked on with apprehension and the need of an effort to secure greater vitality in the strain is to my mind imperative. I have seen strains of Early Jersey Wakefield, beautiful in appearance so long as conditions of growth are ideal, yet failing utterly when attacked by any disease to which the plant is subject. This is the more unfortunate because the enemies of the cabbage are particularly hard to combat; we can, of course, poison bugs and worms, but no one wants poisoned cabbage heads for home consumption. Although it has been the subject of extended investigation, no one has yet given me a practical remedy for what is called black rot of the cabbage, but I know that the most healthy strains will resist it to the extent of producing a crop, even though the field be infested with the disease to an extent which will cause failure in a less vigorous one.

Now, so far as both seed grower and seed dealers are concerned, we all have an identical interest; we all want the best seed we can possibly obtain at the lowest possible price. We do not want a strain which shows no effort at improvement, in which a natural, wild growth predominates, even though that wild growth may indicate great healthfulness and disease-resisting power; nor do we want a type bred with so much singleness of purpose as to destroy its vitality.

I fear that this convention will be unable to determine the actual limitations of men in that direction, and that the actual solution of the problem in all its complexities will have to be left to a conference between the cabbage seed growers and cabbages in the fields next autumn.

Oelwein, Ia.—Charles Hancock, who for some years has been at the head of the C. G. W. greenhouse, has decided to begin business on his own account and has purchased a tract of land for that purpose.

LETTUCE.

I am mixing soil, a clay loam, for lettuce. What manure and fertilizer would you advise adding to same, and in what proportion? When should I sow leaf lettuce to get crops off about Thanksgiving?

J. M.

Lettuce likes a loose soil better than a clay soil. You can make your clay loam soft and loose by adding a portion of sand to the mixture. The manure for fertilizer will also help loosen up the soil.

If you use plenty of good stable manure you need not think of adding any other fertilizer. I would advise mixing the soil soon, so as to be thoroughly rotted before you need it, using one good load of manure to three of soil. Have a load of sand near by to mix in as you pile the compost. Avoid long, strawy manure, since you have little time for it to decay. Manure is never better than when fresh for mixing in the soil. If musty and burned out from heating, it has lost much of its strength and value. Cut the pile down with a spade after about two months and mix it up and let it lie in a heap again until wanted. You need not put it in the beds until the plants are half grown in boxes.

If you plant the seed about September 1 you will have a crop for Thanksgiving.

Nitrate of soda is an excellent fertilizer for lettuce where there is not enough manure in the soil, but it should not be put on until the soil is in the benches. H. G.

NURSERY NEWS.

AMERICAN ASSOCIATION OF NURSERYMEN.
Officers for 1909-10: Pres., F H. Stannard, Ottawa, Kan.; Vice-Pres., W. P. Stark, Louisiana, Mo.; Sec'y., Geo. C. Seager, Rochester, N. Y.; Treas., C. L. Yates, Rochester, N. Y.

THE eighth annual convention of the National Nut Growers' Association will be held at Albany, Ga., October 12 to 14, 1909.

THE Aberdeen Nursery Co., of Aberdeen, S. D., established last spring, has fifteen agents on the road. The same interests conduct a nursery at Fremont, Neb.

THE annual convention of the American Association of Park Superintendents will be held at Seattle, Wash., August 9 to 11. Theodore Wirth, Minneapolis, has arranged an itinerary for a party leaving Minneapolis July 29, and arriving at Seattle August 8.

IMPORTERS are making the decision in the case of the United States vs. Ouwerkerk the basis for many protests against the assessment of duty on evergreen seedlings. Protests by Wadley & Smythe and Maltus & Ware were sustained June 14 by the board of general appraisers.

THE Standard Nursery Co. has just been organized, and takes over the old Treeville Nursery and other nearby property at Knoxville, Tenn. The capitalization of the Standard is $35,000, and the officers are as follows: President, Samuel Harrill; secretary, W. P. Wilson.

THE Stones River Nurseries have been established near Murfreesboro, Tenn., as a successor to the Will A. Vick Nursery. Mr. Vick is general manager of the new organization. I. D. Wilson, a nurseryman of thirty-three years' experience, is superintendent, and Dr. W. C. Bilbro, of Murfreesboro, is president.

THE Gardiner Forestry Co. has been incorporated at Gardiner, Me., for the purpose of planting trees and establishing nurseries. The capital stock is $10,000. The incorporators are Robert H. Gardiner, president; Charles H. Gray, treasurer; Frank E. Boston, D. H. Darling, E. L. Bussell, H. S. Webster, J. W. Robinson, N. C. Barstow, E. W. Morrell, Charles J. Bragdon, G. D. Libby and C. A. Knight, all of Gardiner.

SCALE ON SHRUBS.

Enclosed you will find a sample of some sort of scale. Please name it and give a cure for it. N. F. C.

This is the common brown scale, common on greenhouse plants and attacking outdoor stock, especially in the warmer states. The lime, sulphur and salt solution used for San Jose scale will kill this and all similar scales. There are also a number of specially prepared soluble oils which are easily applied and equally effectual. Kerosene emulsion is an easily prepared and reliable remedy for scale insects. To prepare it take one pound hard soap and two gallons boiling water; dissolve the soap in the water and then add four gallons of kerosene. Churn and mix thoroughly with a pump. For scale this quantity can be added to forty-five gallons of water. If applied to plants with woolly foliage, some burning may result, but those with smooth foliage will not be injured.

PROPAGATION OF HYDRANGEAS

Kindly let me know how to propagate Hydrangea paniculata. O. P. M. C.

Hydrangea paniculata can be propagated from cuttings of half ripened wood in July. The cuttings will root quickly in a shady, sheltered place in the open, but it will be better still if they are placed in a frame, with a covering of slats over them for shelter and shade, particularly for shade, until they are nearly rooted.

This hydrangea can also be propagated from hard-wood cuttings in spring.

D. M.

DISEASE OF PEACH FOLIAGE.

We are sending you, under separate cover, some leaves of a peach tree, which are affected with some sort of disease. When first attacked, the leaves become a bright red color and then curl and dry up. Is it a common disease? What can be done to remedy it? I am located in Oregon. B. & J.

The foliage received seemed to have been attacked by a form of peach blister. Weather and other conditions, which I do not know anything of, may have caused the trouble. I cannot well suggest a remedy without knowing more about the disease. I would advise you to write to the Pomological Department of the State Agricultural College of Oregon, enclosing specimens of the affected shoots and describing fully how the disease starts and spreads. You should be able, I think, to get useful information from them. C. W.

PARK PICTURES.

The exhibition of park photographs which has been gotten up for the Alaska-Yukon-Pacific Exposition under the auspices of the American Association of Park Superintendents has now been put in position in the Agriculture building of the exposition and comprises undoubtedly the finest collection of park views ever exhibited in this country. The scheme of such an exhibition was conceived by the president of the association, John W. Duncan, of Boston, and all the leading cities whose superintendents are members of the association readily responded with their quota of pictures for the exhibit. They will remain on exhibition till the close of the exposition.

FUNGUS ON CURRANTS.

I am sending you a sample of my currants. Please let me know what to do for them, as some of them are quite badly affected. V. C.

The foliage appears to be affected with a fungus. This need not cause you alarm, as all similar ailments yield to spraying with Bordeaux mixture or some other fungicide. It will be late to apply any remedy this season. In the meantime cut off and burn any badly attacked branches. Next season when

you are using hellebore or arsenate of lead for the currant worms, mix it in Bordeaux mixture of standard strength, and it should prevent any further spread of the trouble. To make Bordeaux mixture take six pounds of copper sulphate, four pounds of quicklime and fifty gallons of water. Dissolve the copper sulphate by placing it in a coarse bag and hanging it in a vessel containing about five gallons of water. Do not use any metal vessel. Slake the lime similarly. Then mix the two and add water to make the total liquid quantity fifty gallons. This is good for all fungoids, molds, rots and similar diseases. C. W.

REAPPRAISEMENTS.

The customs officials have announced the following reappraisements of interest to the trade:

GREENHOUSE STOCK.—From Societe Horticole Gantoise, Ghent, exported May 13, 1909; entered at New York. File No. 51591. Invoice No. 26021. Findings of Waite, G. A.: Araucaria excelsa 2½ feet; entered at 2, advanced to 3 francs each. Ditto 8 to 10-inch; entered at .75, advanced to 1 franc each. Ditto 10 to 12-inch; entered at 1, advanced to 1.25 francs each. Ditto 8 to 12; entered at .60, advanced to 1 franc each. Ditto 16 to 24 inch; entered at 1.50, advanced to 2 francs each. Add case and packing.

EVERGREEN SEEDLINGS. — From Union Nurseries, Oudenbosch, exported April 1, 1909; entered at New York. File No. 51329. Invoice No. 14246. Findings of Waite, G. A.: Abies excelsa; entered at $1.80 per 100. Picea pungens, 1 to 2 feet; entered at $6 per 100. Betula inciniata, 10 to 12 feet; entered at $35 per 100. Add packing. Discount, 5 per cent. Shipping and consul fee included. No advance.

NURSERY STOCK.—From Jacs Smits, Ltd., Naarden, exported March 19 to April 2, 1909; entered at New York. File No. 51268 and 51335. Invoice Nos. 428 and 13721. Findings of Waite, G. A.: Rhododendron hybrids, 18-inch; entered at $20 per 100. Silver and gold leaved hollies, 2½ to 3 feet, entered at $30 per 100. And similar goods. Packing included. No advance.

NURSERY STOCK.—From Jac. C. Groenewegen, Santpoort, exported April 8, 1909; entered at New York. File No. 51385. Invoice, No. 23675. Findings of Waite, G. A.: Box bush form, 19 to 21-inch; entered at .15 florin each. Ditto, 16 to 18-inch; entered at .10 florin each. Ditto, 18 to 20-inch; entered at .12 florin each. Ditto, 14 to 16-inch; entered at .10 florin each. Add packing. No advance.

TURNIP SEED.—From Carter, Dunnet & Beale, London, exported January 5, 1909; entered at Philadelphia. File No. 51015. Entry No. 3482. Findings of Board No. 3: Prices as published in reappraisement No. 15125, May 24, 1909. Reappraised value affirmed.

PRUNING FLOWERING SHRUBS.

There are still a great number of florists who persist in pruning flowering shrubs at the wrong time, but fortunately the number decreases yearly. It is nothing short of lamentable to see such beautiful subjects as Spiræa Van Houttei, forsythias and philadelphus sheared into a symmetrical shape each spring. What beauty the shrubs possess after such acts of vandalism passes one's comprehension. Some people are so dyed with the pruning madness that it would seem as if any shrub which did not have a turned-out-of-the-mold appearance must be subjected to a topiary overhauling. The beauty of flowering shrubs is destroyed when they are not allowed to show their natural forms, which are as variable as they are pleasing, and it is earnestly to be hoped that when any of this work is done, it be after and not before the flowering season.

In the case of newly planted shrubs, especially if of large size, a severe pruning is necessary, but with established plants, with a few exceptions, as, for instance, hydrangeas, the work should be done when they have flowered. In the case of philadelphus, it is an advantage to cut out a number of the flowering shoots right to the base and remove weak, dying and in other ways useless branches. This gives the young shoots starting from the base or center of the plants every chance to develop. Deutzias can have the flowering shoots cut clean out, and the spiræas are all improved by some pruning. Loniceras do not need so much trimming, and only dead or decaying wood need be cut out. Cornus, exochordas, viburnums and other varieties can be similarly treated.

Lilacs can be pruned judiciously while in flower, selecting the runaway shoots, which tend to give the plants a lanky appearance. Also, at that time, carefully remove any sucker growths from grafted plants. Own root lilacs are much to be preferred to worked ones. A common practice now is to use ligustrum stock on which to work choice lilacs. These are constantly sprouting from the base, and are about the poorest stock it is possible to use. Ligustrum ovalifolium is generally used, and it is not hardy in the northern states. Hundreds of dead lilacs are annually the tribute for the continued use of this stock. If nurserymen must use privet stock, let them take L. Regelianum or even vulgare, both of which are hardy. Speaking of lilacs reminds us that as soon as the flowering season is over the decaying trusses should be removed. If allowed to run to seed, they seriously cripple the vigor of the trees for another season. The same also holds good of azaleas, kalmias and rhododendrons. These latter shrubs will need no pruning beyond removal of dead wood.

Rhododendrons, kalmias and andromedas, if not quite heavily mulched with leaves, will soon suffer. In some places this mulch is removed in spring for neatness' sake, and continuous waterings are necessary to keep the plants alive in hot, dry weather; also making them better marks for the Japanese lace bug and other insect pests. The lace bug is the most serious pest which has attacked kalmias and rhododendrons within living memory. Some growers imagine the foliage is discolored by red spider, until they are shown the fly and its workings. Spraying with kerosene emulsion, getting the mixture on the under sides of the leaves, as soon as the pest appears, is the best antidote known, but even this is not by any means a complete remedy. C.

PACIFIC COAST.

SAN FRANCISCO.

The Market.

The weather has turned considerably warmer and the most noticeable effect has been that all kinds of stock have become plentiful. This is especially true with carnations, for never in the history of San Francisco have they been so abundant or cheap. The sidewalk merchants receive quite a lot of them and they are not paying over $1 per hundred for the best stock to be had. This, however, will last for only a short time, for when the immediate crop is gone, the following cutting will not be so heavy and is bound to bring much better prices. Roses are also in too great profusion for the business at hand, which has fallen off greatly within the last ten days. Apparently everyone with any money to spare has left the town, and those who are left are not interested to any great extent in purchasing flowers.

Sweet peas continue to be the best selling flower and, although they are cheap, they move quite freely. People do not seem to tire of them as they do of other outside stock, and they are favorites with the best class of trade, as well as that catered to by the hucksters.

Late crops of Lilium longiflorum are being forced into flower, but during the last few days' heat they became so plentiful that the retailers are having some trouble to find use for them. The same can be said of valley, which has proven a decided drug for the last ten days. Some of the better varieties of cactus dahlias have found favor with the buying public and huge bowls of them are displayed in the shop windows. Gladioli are commencing to be shown in good quantities and it is evident they will be in favor again this season. During last year a heavy demand was created for the newer and larger varieties and there is no doubt that it will be repeated.

Various Notes.

John Gill, of West Berkeley, Cal., has returned from a three weeks' trip to Seattle and Portland.

D. Raymond, of San Jose, is in town, interviewing the local dealers.

C. Halkier, manager of the Northwestern Floral Co., of Tacoma, Wash., is in town for a few days' visit.

The MacRorie-McLaren Co. received a large consignment of phalænopsis during the present week. They consisted of several of the most popular sorts and arrived in excellent condition.

C. C. Morse & Co. and the California Nursery Co. are among the nurserymen exhibiting at the Seattle exposition from this neighborhood.

H. Hayashi has completed two houses, 25x140 feet, at his Elmhurst nursery.

H. Gresens, for many years in the florists' trade at Alameda, Cal., has returned from a six months' trip to Germany.

G.

SPOKANE, WASH.

The Market.

While in other localities heat prostrations are numerous, we in Spokane are enjoying ideal June days, with cool mornings and evenings, and the weddings go merrily on each Wednesday. The bedding season is practically over, with hanging baskets still in demand. All around it has been a highly satisfactory season, although a little late.

Though the scarlet fever epidemic put a stop to much active business in other lines, the florists have not felt the depression. In fact, they have been a little busier with flower orders for the sick ones, and also with funeral work. The disease has almost disappeared now and none of the trade was attacked, so far as is known.

The general sense of the florists is that trade this season has been above the average and quite satisfactory.

Various Notes.

Many visitors en route to the A. Y. P. exposition take the stop-over in Spokane and are surprised at our fine city. The falls, of course, are the first attraction. Just now they are at their best and a five minutes' walk from the main business section gives a fine view of any of the three cataracts. Riverside avenue takes its name from its location west of the falls. It is the principal business street and all the flower stores are located on it. The residence part of Spokane is situated on both sides of the river, mostly on high bluffs, making picturesque and beautiful spots. To the northeast are visible the foothills to the Idaho mountains, with their pines and purple mists. With such natural advantages, the City Beautiful committee can accomplish wonders in making it one of the finest appearing cities to be seen.

The florists' windows still present much good stock. Fine Richmond roses are one of the leading features at the store of Hoyt Bros. Co. This firm has had a fine trade in cork bark hanging baskets. A large cork bark structure resembling a tree trunk, planted with summer blooming plants, is their principal sign on the outside edge of the sidewalk. Within the store are also several more of the same tree trunks and stumps, used for the display of ferns and palms. Many favorable comments are heard on these decorations.

The Spokane Florist Co. had an extra booth for the display of bedding stock on Sprague avenue, and was well pleased with the new venture. Besides attract-

ROCHESTER, N. Y.

The Market.

The flower business in this market is completely demoralized. Carnations, roses, sweet peas and in fact everything is a glut and up to the time of writing there seems to be no relief in sight. Trade began to show signs of a downward trend early last week and by June 26 had completely fallen off. What stock was moved went at a great sacrifice. The principal causes of this condition are no doubt the extreme heat and the abundance of outdoor flowers, principally roses. The latter are to be found in most gardens in this vicinity and can be bought from the nurseries at a low figure; in fact, I was informed the other day by a florist that he could get all he wanted at a near-by nursery simply for the cutting, which explains to a degree the falling off in the demand for roses. After this stock has gone conditions will improve.

Various Notes.

Jacob Thomann and his son have left for Europe, intending to visit France, Holland, Italy and Switzerland before their return in about two months' time.

James Bishop, one of Rochester's pioneer florists, is now engaged in the herbarium of the city parks department. As a keen observer of nature and possessing a wide knowledge of botany, Mr. Bishop's services will no doubt be a valuable acquisition to the department.

In the grounds of John House this week was seen Styrax Japonica in bloom. Mr. House takes great pride in this tree, it being reputed to be the only one in Rochester.

J. B. Keller's Sons are making extensive alterations in their store, which will be one of the largest and handsomest in the city.

H. B. S.

Martins Ferry, O.—Davidson Bros. will erect a 70-foot greenhouse on Laughlin Heights, to be used for carnations.

FERNS

Whitmani have proven themselves the best of all Ferns, except the Boston, in our judgment, up to the present time.

We are in a position to give you good values in both Bostons and Whitmani. Write us.

PETER REINBERG, 1,800,000 Feet of Modern Glass 35 Randolph Street, **Chicago**

Mention The Review when you write.

NORWICH, CONN.

The June rose show of the New London Horticultural Society was held Wednesday afternoon and evening, June 23, in City hall. With each year of the show has come a raising of the standard of flowers exhibited, and that the show Wednesday set the peg just a notch higher than ever before was the opinion of the experts, for quality was the conspicuous feature in all classes.

Outside of the roses the special features of the show were found in three tables arranged at the head of the hall and winning enthusiastic praise for the exhibitor, Charles T. Beasley, gardener for Mrs. William C. Lanman. In the center was a table set for dinner with rose decorations. To the left was a table of gloxinias and silver medal winners from the Boston firm, the Schlegel & Fottler Co., who supplied the seed. On the third table Mr. Beasley had fringed begonias, among which he also showed four rare dahlias which came over from Scotland. In close proximity a handsome collection of thirty varieties of peonies, shown by Gustave Neuman, gardener for Alfred Mitchell, New London, attracted admiring comment.

First noticed on entering the hall was a long table on which were prominent vases of giant peonies, single and double, from George S. Palmer, of New London, Alfred Flowers gardener, and Morton F. Plant, of Groton. In Mr. Palmer's display also were canterbury bells, foxgloves, red and white daisies, and from the Plant estate were irises, sweet-williams and foxgloves. Here also especially noticed was a beautiful rose basket from S. J. Reuter & Son Co., of New London.

Pansies had their place on a table to the right of the door, W. W. Ives showing twenty-five beauties, all different, and John Moore having an extensive display, while Dr. Clapp had a fine assortment of eighteen vases.

YOU WILL FIND ALL THE BEST OFFERS ALL the time in the Review's Classified Advs.

ERIE, PA.

The Market.

The high school commencement exercises have made business lively this week. The sweet girl graduate was presented with lilies of the valley, sweet peas and American Beauty roses. The alumni banquet also required extra exertion on the part of the florists.

Children's day is being celebrated in the local churches on the different Sundays in June, and the demand for floral decorations keeps up well.

Various Notes.

Erie celebrated one of the greatest events in its marine history on Thursday, June 24, when thousands witnessed the dedication of the new public dock, built by the state of Pennsylvania at a cost of $150,000. The steamboat landing was elaborately decorated with flags and bunting, and fireworks were exhibited from the pier. The chamber of commerce rooms, where the reception to Governor Stuart, Lieutenant-Governor Robert S. Murphy, Speaker Cox and other distinguished visitors was held, were tastefully decorated with palms, ferns and cut flowers. Some of the speakers were presented with bouquets of roses. The floral decorations at the chamber of commerce were furnished by the Baur Floral Co. and those at the Kalikwa Club rooms were by Chas. G. Offerle.

The building for the Reliable Home Furnishing Co. was completed last week and the grand opening occurred June 23. The floral decorations were elaborate. Hundreds of palms were used. A large floral horseshoe, made of Lawson carnations, and a floral panel with "Success" in large letters, attracted much attention. Over 7,000 people attended the opening and they were entertained by a local orchestra and received a pretty souvenir of the occasion. The Baur Floral Co. furnished the floral decorations.

Miss E. Garlow, of Conneaut, O., was in the city on business June 22.

Mrs. Harry Clawson and her little daughter, Mildred, of Warren, Pa., are the guests of Mr. and Mrs. Henry Niemeyer.

John Hughes, of East Springfield, Pa., was in the city June 24. B. P.

RANDOLPH, VT.—Work has been started on a large addition to H. M. Totman's greenhouses, which will make these the largest in the state.

Fill your empty houses with **ARAUCARIAS,** the much admired decorative plant. They grow into money fast and will yield you a profit of from 100 to 150%.

Fill your empty houses with **ARAUCARIAS,** the much admired decorative plant. They grow into money fast and will yield you a profit of from 100 to 150%.

REMEMBER

We are one of the largest importers of these well-known and beautiful evergreen decorative plants, the **Araucaria Robusta Compacta, Excelsa Glauca and Excelsa,** and those we offer were imported the Spring of 1908.

Florists should bear in mind that no garden, lawn, etc., is complete without the Araucaria; therefore, if you wish to make money, recommend the Araucaria to your customers. Introduce this noble plant to your trade. We give you a special price, and it will pay you to handle them.

Araucaria Robusta Compacta, Glauca and Excelsa. Our reputation of being one of the largest importers and shippers of this beautiful evergreen decorative plant is so well known, dating far back into the 19th century, that our name, as well as the Araucaria itself, shall never die out, and is still fresh in people's minds, same as when we first started. Why the Araucaria is so popular is because it is an ancient plant, kept by Greeks and Romans as a special favorite in their household, as a good omen.

Araucaria Robusta Compacta and Excelsa Glauca, new importation, 3 tiers, 3-year-old, $1.00, $1.25 and $1.50.

Araucaria Robusta Compacta, specimen plants, 7 to 8-in. pots, 4 to 5 years old, 3, 4 and 5 tiers, 20, 25 and 30 inches high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa Glauca. This is a beautiful blue variety, very graceful and beautiful. Specimen plants, 6-in., 7-in., 8-in. pots, 4 and 5 years old, 4, 5 and 6 tiers, 20, 25, 30 and 32 in. high, same in width, $1.50, $1.75, $2.00, $2.50 to $3.00 each.

Araucaria Excelsa, 3, 4 and 5 years old, 4, 5, 6 and 7 tiers, 6-in. pots, 20, 25, 30 and 35 in. high, an Elephant for only 75c; a Jumbo for $1.00 and a Holy Terror for $1.25 to $1.50.

Araucaria Excelsa, a consignment of small sizes just in, per Steamer Manitou, 35c, 40c, 50c and 60c.

Kentia Forsteriana and Belmoreana, just arrived, per Steamer Manitou, from Antwerp. Price for good stuff, 75c, $1.00, $1.25, $1.50, $2.00 each.

"Mein Haeuschen steht im Gruenen."

Look! look! look! Godfrey Aschmann's world-wide-known, pure white, fragrant moonvine, **Ipomoea Noctiflora,** with flowers as big as a saucer, 4-in pots, staked up, $12.00 per 100; 3-in., $8.00, and 2½-in., 5c in dozen or 100 lots.

All goods must travel at purchaser's risk. Cash with order, please.

Please state if you want stock shipped in or out of pots.

Godfrey Aschmann, West 1012 Ontario St. **Philadelphia, Pa.**

LEXINGTON, KY.

The Market.

Business conditions have not changed much since last week's report. Roses are plentiful, but are beginning to show the effects of the warm weather. Carnations are arriving in large quantities and some of them are of good quality, considering the season, but the demand for good stock is limited. Sweet peas are becoming more plentiful and consequently the prices are lowering. Gladioli are in fairly good supply and demand; the quality was never better here. Lilies are of fairly good quality, but are rather scarce at present. There is a good demand for green goods, such as smilax, fern leaves and asparagus.

We are now having some extremely warm weather and plenty of rain—in fact, too much of it.

Various Notes.

Anderson & White have been quite busy of late, with decorations, parties, etc.

William Bell says weddings are about over and business is now falling back with him. He is cutting some snapdragons of good quality at his greenhouses.

Plenty of stock is being cut at the J. A. Keller estate. This firm has some excellent gladioli.

Albert Reichspfarr, of the Richmond Greenhouses, Richmond, Ky., was a recent visitor here, calling on the boys at the J. A. Keller estate and on Lucien Le Clere at the South Broadway Greenhouses. Mr. Reichspfarr reports a good spring business at his place. He is a heavy buyer from this market.

BLUE GRASS.

NEEDHAM, MASS.

At the nursery of W. A. Gates, on Webster street, there has been a splendid blooming season for peonies. A large number of cut blooms were sent to Boston for sale. The Gates stock is that formerly held by the well-known James Hyde, of Newton, a peony fancier. The latter was the first mayor of Newton. Mr. Hyde and his father before him made a specialty of peonies. Mr. Gates is the successor of Mr. Hyde and the Newton Cemetery Association in the nursery line and represents their former interests.

NEW MILFORD, CONN.—Jos. E. Cornell & Co., the Danbury florists, have closed their branch at this place. Fred Hoyt continues to do a flourishing business here, with his greenhouses on Town Hill.

Now is a good time to fill up on thrifty young

GERANIUMS

ARE A SPECIALTY WITH US

A gentleman well known in the horticultural world said a few days ago when looking over our place: "Generally when we think about **VINCENT** we think about **GERANIUMS.**" That's all very well, but what we want you to do is when you think about **GERANIUMS** to think about **VINCENT,** and if you will soon think about what you are going to grow next season, and will write us, we will give you a special price that will interest you, to the extent that we will have your order booked by return mail. This will enable us to gauge our propagation to better meet the demand. The collection we are offering for next season will without doubt be the best commercial collection ever offered to the American Trade.

Easter will come next spring March 27th, so you will want to get your Geraniums in good time. And, by the way, is there not more sure money in good Geraniums than in some other stock generally grown for Easter?

FOR IMMEDIATE SHIPMENT

We will send 1000, 50 each of 20 good distinct kinds, our selection of either single or double, from 2-inch pots, for $18 50; from 3-inch pots, $25.00.

Cash With Order.

ASTERS! ASTERS! ASTERS!
Great surplus in aster plants. I want to use the space now occupied by my aster plants and will sell plants at a great bargain. Plants are large fine ones, grown from my own and James Vick & Sons' seed. Never had better plants. While they last, $1.75 per 1000, $15.00 per 10000, $120.00 per 100000. F. O. B. Spencer. Superb aster collection, including nearly all of the best cut flower varieties. If you want these plants, let me have your order quickly, as they will not last long. Mention the date of this paper when ordering.
BARNES' GARDENS, SPENCER, IND.

100,000 aster plants. Late Branching, in white, pink and lavender, Queen of the Market, Ostrich Feather, Comet and Victoria, in best mixed colors. Good, strong plants, ready to plant out, at $2.50 per 1000; 5000 lots, $2.00 per 1000. Seed saved from the largest and most double flowers only.
Gustave Pitzonka, Bristol, Pa.

BULBS.

BULBS. THIS ADV. IS OUR DRUMMER. We certainly have got them, and they are O. K. in size and condition, owing to cold and damp spring. And the prices are right, delivered to you at 50% below Dutch bulbs, and, being acclimated, flower ten days sooner. They are true, sound, clean, dry, healthy, selected stock. A postal will bring you all details as to varieties to plant or force, with cultural directions.
D'ALCORN,
The Southern Daffodil Farm, Portsmouth, Va.
Where the fine Emperor comes from.

Home-grown narcissi, tulip and other bulbs. Have you received our "Special Offer" on the above named bulbs for fall delivery? If not, better write for it. Remember we grow more narcissi bulbs than all other southern growers put together. We offer an especially fine stock of Narcissus Emperor.
Hubert Bulb Co., Box 100, Portsmouth, Va.

HOLLAND BULBS. A complete line of healthy, well-grown, well-graded bulbs for fall delivery from Van Til-Hartman, Hillegom, Holland. Price list and full information from
Jackson & Perkins Co., Newark, New York, Sole American Agents.

For FRENCH BULBS, anemones, cannas, dahlias, gladioli, lilium, peonies, ranunculus, tigridias and any kind of bulbs, apply to
E. Hilaire Bechet, Bulb Grower, Angers, France.

An offer of your surplus stock, placed in THE REVIEW'S classified department, will be seen by nearly every buyer in the trade.

Bulbs. Special wholesale price list of native liliums now ready. Send for it.
L. E. Williams, Nottingham, N. H.

Bulbs. Emperor, Empress, Barri, Poeticus ornatus, Princeps.
Post Bros., Bulb Growers, Richmond, Va.

SEDUMS.

Sedum carneum, strong plants, $1.50 100.
Mountain View Floral Co., Portland, Ore.

SEEDS.

COBURN'S SELECTED PANSY SEED.
BEST MARKET STRAIN GROWN.

Our seed is saved from about 12,000 plants, carefully selected, when in bloom, from the 500,000 we grow for our spring sales.

Each plant is carefully selected, color, size, form and substance being taken into consideration, and the proportion of each color is properly balanced.

As a result of over 25 years' work along these lines, we feel justified in claiming to have the best strain of pansies on the market, and we invite trial and comparison.

Growing our stock in this manner, we have only a limited amount of seed to spare, and in order to distribute as widely as possible, we offer it in packets of 1,000 seeds. Price $1.00 per packet (only one to each customer).
I. E. COBURN, 291 Ferry St., Everett, Mass.

GIANT PANSIES SEED from a large early strain, carefully built up from a combination of the seed from the best growers of this country and Germany. This seed will compare favorably with any high priced seed on the market.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

CYCLAMEN GIGANTEUM PERSICUM SEED, 1909 crop. I have a surplus of a few thousand seed in the following colors: deep crimson, rose, shell, white with carmine eye, and pure white, 60c per 100; $5.00 per 1000 seed.
C. F. Mahan, R. D. No. 8, Dayton, Ohio.

Seed packets and bags. Catalogue, clasps and commercial envelopes, printed or plain. "If it's a Spangler bag, it's a good one." Estimates furnished.

PRIMULA BULLEYANA.

Primula Bulleyana is a newly-introduced species from China, where it was collected by Geo. Forrest, on behalf of Messrs. Bees, Ltd., Liverpool, who recently exhibited a batch of plants in flower before the Royal Horticultural Society, London, where it gained a first-class certificate. The tall inflorescences bear orange-buff-colored flowers in whorls, sometimes as many as three tiers. The leaves are like those of the common primrose or polyanthus. The calyx is mealy and the flower-stem is also farinaceous in the upper part. Mr. Forrest states that P. Bulleyana is a tall, moisture-loving plant, sometimes three feet high. In foliage it somewhat resembles P. serratifolia. The plant grows in huge colonies covering several acres.

MOVING ADIANTUM HYBRIDUM.

Is it safe and advisable for 2-year-old Adiantum hybridum to be lifted from a bench and planted in another bench in new soil? E. F. H.

Gradually withhold water from your Adiantum hybridum till the plants become rather dry. You may then lift and replant them with perfect safety.
Albert F. Amling.

This is The Florists' Manual

By William Scott

SECOND EDITION

THOROUGHLY REVISED AND BROUGHT UP TO DATE

NO SCIENCE, BUT LOTS OF PRACTICAL COMMON SENSE

"I have several times been consulted by those who would make a beginning in the Florists' business. In each case I have said that the first step is to subscribe for a Trade Paper, and the next to procure a copy of the Florists' Manual." —J. A. VALENTINE, Pres. Park Floral Co., Denver, Colo.

"Find enclosed $5 for the Florists' Manual, by William Scott. It is the best book of the age on commercial floriculture and should be in the home of every gardener."—CONRAD FORBACH, Buffalo, N. Y.

No dry-as-dust botanical classifications, but tells you just how to produce marketable plants and cut flowers in the best and cheapest way.

Greenhouse Heating.

If J. N. G. A., Morton Grove, Ill., will repeat his inquiry, giving fuller details and signing his full name, his question will have attention in this column. Anonymous inquiries can not be answered.

CAPACITY OF BOILER.

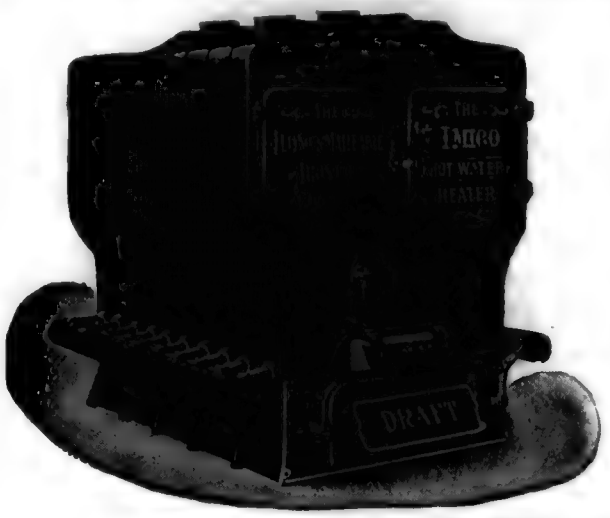
We would like someone to answer whether or not we can heat properly with steam, even in zero weather, with the boiler described below: Four houses, each 25x150 feet (15,000 feet). Two houses are joined together east of the boiler and two joined together west of the boiler, which puts the heating plant in the center of the houses. The boiler is of single draft, fire tube pattern, nine feet six inches long and forty inches in diameter, with forty-two 3-inch tubes. The firebox is 3x5½, grate surface twenty-four inches high. This firebox has a water jacket on top and sides into which the return water first enters. The 4-inch steam outlet is above this firebox. B. F. C.

Yes, the boiler will carry your place all right. G. T. E.

A SMALL HOUSE.

My house is 18x60 feet, six feet to the eaves, fourteen feet to the ridge, with glass in both ends and two feet of glass in the side walls. I wish to use 2-inch flows and 1½-inch and 1¼-inch returns. My hot water boiler is 36x60 inches, with sixty-one 2-inch flues. It will be one foot below the floor of the house. Will it be deep enough? We want 60 degrees in zero weather. The boiler is located at the south end of the house. C. A. B.

My idea on the piping of this house would be to use four 2-inch flows, one on each outside wall and one flow pipe under each bench. Divide by a tee at the end and come back in two 1½-inch returns, running them into a main cross return back to the boiler. Run two return 1½-inch pipes on each side wall. Your boiler is all right, but the head room is hardly enough and I would advise to put the boiler in a pit about two feet to two and one-half feet deeper than the cellar. Get the vertical columns of the flow and return as long as possible. G. T. E.



HOUSES AT RIGHT ANGLES.

I have a new greenhouse, 16x114, running north and south. The south end is against a shed and the north end against a greenhouse, which runs east and west. The new house is four feet to the eaves, with fourteen inches of glass on the sides. The ridge is eight and one-half feet high. The boiler is in a pit at the east end of the east and west house, thirty-three feet from the center line of the new house. I could put a boiler in the shed at the south end of the new house, but that would mean running two fires. Could I heat this new house, 16x114, joining it on to the heating system now in the old east and west house, and use one boiler? In the old house there are 2½-inch flows and 1¼-inch returns. Hot water is used. Would larger pipe be better for the new house? The coldest temperature outside is about 20 degrees above zero and in the house 54 degrees is wanted. How should I heat this new house? J. T.

I would leave the boiler where it is and run a new flow and return through the east and west house to the junction with the north and south house. This should be 3½-inch pipe. Run the flow to the far end of the north and south house, tee off with 1¼-inch returns and bring the same into a main cross return in line with the south side of the east and west house. Run the return 3½-inch back to the boiler. G. T. E.

A CONICAL HEATER.

I have a greenhouse about 17x36, three and one-half feet to the eaves and eight feet to the ridge. There is glass in one end only. I heat this with a round hot water boiler, twenty inches in diameter and twenty-eight inches high, the water jacket extending entirely around the boiler. There is a 3-inch opening for the flow. The house is piped with twelve 1½-inch pipes under the benches, fed by a 2-inch riser under the ridge. Is this

boiler capable of heating an extension to the present house, doubling its length, or could the proposed extension be independently piped, thus making two separate houses? Could the system be connected with the village water main, which is not high pressure, and thus do away with an expansion tank? The required temperature is 55 degrees in zero weather.

A. B. R.

Your boiler is a little small, but if worked hard it will keep the houses at 55 degrees in zero weather. Your addition can be piped as a separate house; in fact, that is the simplest and easiest way to do it. Put in the same number of pipes as are in the other house.

I would not connect the system to the city water, as there are various troubles from such arrangement. Put the expansion tank in; one with a good capacity and as high up as possible. G. T. E.

ST. LOUIS.

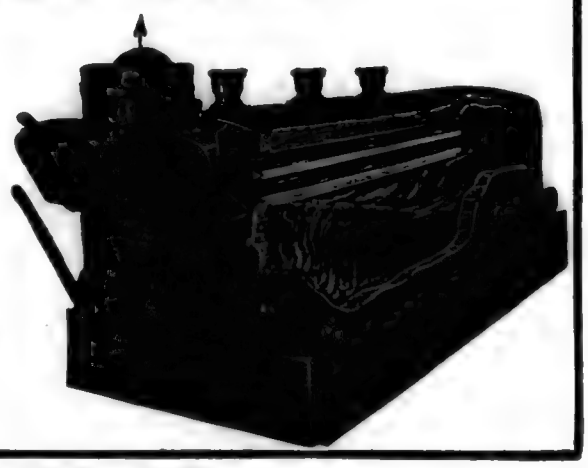
The Market.

The market conditions are about as usual at this time of the year. Stock is of poor quality and prices are low. The wholesalers have an easy time to dispose of the better grade of stock, which is scarce, but of the second and third grades the market is pretty well supplied. The weather is hot and nearly all of our local growers are throwing out their roses and carnations, which should limit the supply and raise the prices a little.

The local retailers are only laying in a small stock each morning, as business is down to funeral work only. Monday morning, June 28, consignments showed roses and carnations of poor quality, and sweet peas with much shorter stems than usual. Lily of the valley is good, also gladioli and a few asters. All kinds of greens are plentiful.

Various Notes.

Julius Schaeffer has returned to the city after a visit to his parents in Germany, and has taken a position with Adolph Brix.



E. W. Guy, of Belleville, spent Saturday, June 26, in the city, buying supplies. Mr. Guy reports that he, with Mrs. Guy, will take in the convention this year, Cincinnati being Mrs. Guy's former home.

Fred S. Plant, H. M. Schisler and B. P. Corneli, our local seedsmen, who attended the meeting of the American Seed Trade Association, recently held at Niagara Falls, Ont., have returned home and report spending three pleasant days and meeting many old friends in the trade in the convention city.

Fred Foster celebrated his nineteenth wedding anniversary June 20 at his country home in Kinloch, with a large gathering of his friends, whom he entertained with a fine spread on the lawn.

F. W. Ude, Jr., is contemplating build-

ing four new greenhouses this summer. Mr. Ude at present has about the largest amount of glass in Kirkwood.

Herman Ude, formerly a Kirkwood florist, now for the last seven years in the florists' business at Richmond, Va., paid a visit to his parents, Mr. and Mrs. F. W. Ude, Sr., and his brothers in Kirkwood the last week.

John Seketer, who recently opened a wire shop at Thirteenth and Pine streets, in the wholesale district, has given up being his own boss. The stock and fixtures on hand were bought by the W. C. Smith Wholesale Floral Co.

Mrs. Annie Brill Jordan, wife of the late J. M. Jordan, died last week, June 22, at the age of 75 years, in Omaha, Neb., at the home of her son, Harry Jordan. The funeral took place Wednesday, June 23. William Jordan, with the City Forestry department, is the only one left here of the Jordan family. The many friends of the Jordan boys in the trade extend their sympathy.

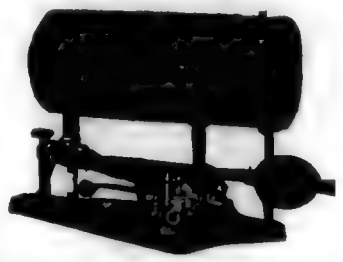
William Ellison, of the Ellison Floral Co., is spending his vacation at Macatawa, Mich. Mrs. Ellison and her daughter, Mrs. Wordy, will follow next week. They will be gone two months.

The Florists' Club will hold its regular monthly meeting Thursday, July 8. The trustees will make a full report on the picnic. The nomination of officers will take place and S. A. F. convention matters will be discussed. President Young requests all members to attend.

The older members of the Florists' Bowling Club have called for a practice meeting to see if St. Louis will be represented at Cincinnati next month. Those who will attend are: C. A. Kuehn, E. W. Guy, A. Y. Ellison, Carl Beyer, William Young and J. J. Beneke. From these a good team could be selected.

Arthur Y. Ellison, of the Ellison Floral Co., made a trip to Boonville, Mo., last week to furnish the table decorations for a swell reception there.

Miss Minette Beyer, bookkeeper for F. C. Weber, entertained a number of her friends last week with a pink tea at her home in honor of Miss Adele Weber, who left Tuesday, June 22, to spend the summer abroad.



Fred C. Weber, wife and daughter, and Theo. Miller, wife and daughter, left Tuesday, June 22, for New York, and sailed Saturday, June 26, on the steamer Cleveland, to spend the summer abroad.

The Missouri State Board of Horticulture held its meeting June 29 to July 1 in the Woman's Magazine building in University City. The visitors were the guests of the directors of the Missouri Botanical Garden, July 1, and took part in the Shaw banquet in the open at the garden. J. J. B.

WADING RIVER, N. Y.

Elihu S. Miller, of this place, well known in the trade as a grower of bulbs and hardy plants, has been appointed by Gov. Hughes as one of the trustees of the New York Agricultural Experiment Station. Concerning this appointment a local newspaper expresses the following highly favorable opinion, which will probably be heartily concurred in by all of Mr. Miller's acquaintances: "The Governor has made a good selection. One could canvas the state from one end to the other and a more progressive agriculturist or florist could not be found. He will prove a valuable assistant in this work, for he has had years of experience in experimental work on his own account."

LOUISVILLE, KY.

The Market.

Business last week was all that could be expected for this time of the year. We are having a spell of hot weather and indoor stock is showing the effects. Good roses and carnations are hard to find. A good many of the growers will commence to replant carnations in a week or ten days. Roses are being dried off and some are tying them down now.

Sweet peas are not as plentiful as they were the week before; still there is no shortage. Daisies have been added to the list of outdoor flowers, which are quite plentiful. Some good gladioli are seen in the show windows. Green goods, such as smilax and asparagus, are still plentiful, while fern leaves are as good as cash.

Various Notes.

Nanz & Neuner are displaying a hardy and garden flowers in their show window, in many varieties.

The Greek has been having a special sale of carnations and roses, selling them at 25 cents per dozen. He sold some long-stemmed Beauties at $2 per dozen. The stock was of good quality, although the roses were short-stemmed, about ten to fourteen inches long. All the flowers were shipped from the Chicago market.

K. R.

HELENA, MONT.

Current Comment.

There is the usual slackening of business after the spring and Decoration day rush, but no one complains, for trade in the busy season of 1909 has been good indeed, despite the unfavorable weather, the cold lasting right up to June and the rain at the time of writing being still in evidence. The people of this state usually pride themselves on their climate, but even the most patriotic of them have climbed down recently when the weather topic has been frought forward, such has been the heavy and continual rainfall. Strange to say, the floods which usually follow exceptional rains have not come, and last year's washouts have fortunately not been repeated. The farmer is one of the few individuals who rejoice at the antics of Jupiter Pluvius, while the florist mourns the absence of old Sol and expects every moment to hear of delay on the railroads and the consequent ruination of his shipments.

The State Nursery Co., Charles Horn and the Helena Floral Co. are all booming. The first-named institution, which is adding to its houses this summer, has had a record season in all departments; seeds, trees, plants, cut flowers, implements, etc., have been shipped in great quantities, and the slacker season is, for a time at any rate, welcomed by all after the efforts of the last few months.

The Market.

Trade is falling off some now and it reminds us that we are starting on the summer basis. There has been a good demand for roses, valley and sweet peas for weddings, but the bulk of these are about over now, so there is not much in sight but funeral work, which is sure to come, with an occasional wedding, etc. There is still some planting being done. This line of work has held up longer this season than usual. It looks as though the late comers had been keeping an eye on their neighbors, to see what they would do, and they would then try to go one better.

There are some fairly good roses in market for this hot weather, and carnations are holding their own fairly well. Sweet peas are quite plentiful and prices are down to what they have been, but the recent heavy rains have been hard on them.

Most of the growers are getting busy replanting roses, and some carnations have been housed, so there will be some early stock in this market. Some good lilies are to be seen, but they do not find a ready outlet.

Various Notes.

The Florists' Club has decided on July 21 for the annual picnic, which will be held at Buckeye lake. There will be special cars to handle the crowd, and the committee, consisting of James McKellar, I. D. Seibert, Jacob Reichert, William Metzmaier and Sherman Stephens, is hustling to get the crowd into shape. They expect a larger turnout than last year, when they had two chartered cars.

The Fifth Avenue Floral Co. is cutting some good Maids from new stock, and they find a ready sale.

Gus. Ackerman is cutting some good roses at present.

C. A. Roth has some fine plumosus and smilax, which now come in handy.

Sherman Stephens reports quite a little planting still on at Greenlawn.

The Livingston Seed Co. has been cutting some good carnations for this time of the year, and they have found a ready market.

From all reports, there will be a good delegation from here to the convention.

J. M.

MANSFIELD, MASS.—Charles Holmes is erecting two greenhouses, each 25x200 feet, on Hall street. They will be used for forcing cucumbers.

THE RETAIL FLORIST.....

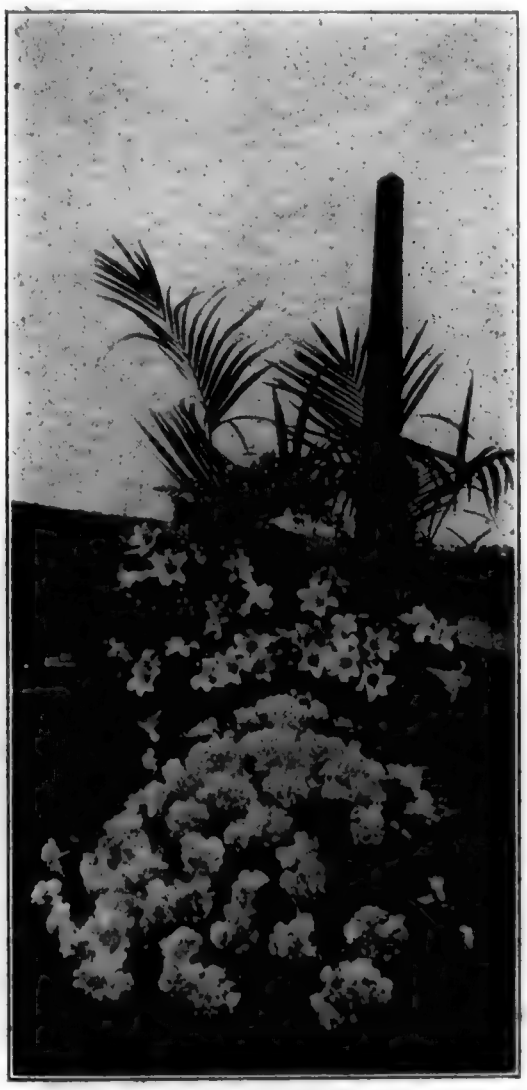
GRAVE DECORATIONS.

A field for business capable of much development is that of grave decorations. Did you ever notice in the daily papers of the big cities, that at the head of the obituary column there frequently is a space devoted "In Memoriam" to those who died on that date in years gone by? Actuated by the finest of sentiments, people pay good money for the privilege of printing there verses dedicated to their departed relatives. How much better that they should lay flowers on the graves!

The accompanying illustrations show two views of a grave decoration arranged by the Bell Floral Co., Franklin, Pa. The family wished to show its remembrance of the birthday of the deceased and took this excellent way of doing it. The florist made a large flat bunch of Enchantress carnations and Sprengeri, large enough to cover the entire grave. This was placed with the tip of the spray at the foot of the grave. At the head there stood a large basket of lilies and variously colored antirrhinums, backed by palms and ferns. The illustrations show two views.

Sentimental persons can find innumerable occasions for the use of such decorations; anniversaries of birth, marriage, death, etc., and there can be no better public manifestation of unforgetfulness.

In winter when the weather makes it undesirable to use cut flowers for such a purpose, a design of boxwood, or leucothoe, or laurel may be used. The widow of one of Chicago's leading citizens at Christmas each year places on his grave a great cross of boxwood.



VARIETY IN FLORAL WORK.

Beware of Monotony.

It is all very well to have favorite styles in flower arrangements, but to have one favorite style is all very ill. To have an individuality is an enviable distinction, but to keep thrusting any one creation continually before the eyes of the public marks the designer as a shallow faddist. One design for a pillow, one for a wreath, one for a star, one for a crescent, and so on down the list, is better, of course, than one fashion for all, but dozens of ways for each is the introduction to hundreds of ways for each.

Every house to be decorated is worthy of a design of its own. Some features, of course, may be repeated, but this thing of contracting and expanding the same scheme for wide and narrow doors and high and low ceilings is creditable to a hack. Any building of character should be studied and understood, and in attempting to decorate it the designer must fall in with and follow the architectural lines, just as he should follow the design lines of a simple funeral piece.

By this is not meant that he must always outline a mirror frame or a window, but that he must not ignore its place and style, any more than he must load it with decorative material to hide it completely. In festooning a mirror he will remember to return to base occasionally; that is, to catch his garland to one of the corners, and not roam "any old way" across the surface of the glass.

Anniversary Decoration of Grave.

Discovering New Ways.

His first venture in this field will not be the only route by which he will travel in the future, but he will find new ways each time, and by conforming to the lines of the building will find himself not in bondage to a rule, but free, with ever widening opportunities. Discovering new ways does not come by working the same old scheme "just this once" to save time, but by discerning the form and plan and adding touches to further develop the picture.

A selective study of the various furnishings of a house is not a difficult matter. A wide-awake person would not set a full, heavy vase of American Beauties on a slender, spindle-legged table, but he would choose a slender vase of delicate-tinted roses for it, while he would cast about for a massive mission piece on which to rightly display the Beauties.

In Harmony With the Furnishings.

If called upon to decorate a mantel in a bungalow where the findings were uncut stone, the discriminating person would add a twig or birch basket, with brakes and wild flowers. Or, if it were in order to decorate a fairy-like mantel of elaborate carving, he would bring out a cut glass basket or crystal bowl, filled with daintily colored hothouse beauties.

A stairway finished with slender banisters in white may be interwoven with dainty strands of green, while a massive, broad staircase, with a heavy newel post, will require plants of expansive foliage and generally ponderous appearance. If a wide hall corner is to be screened off for musicians, it may be properly done by the use of large foliage plants, but for a narrow passageway, so often reserved for the musicians' corner, try a curtain of diamond-shaped meshes of smilax, broken at one side by a tall vase of a half dozen or so specimen flowers. It looks reasonable to place a long, slender centerpiece on a long table, rather than a solidly built one in the center, crowding the middle section of the table and leaving the ends with no decoration.

The Wedding Bower.

There is no best way to decorate a wedding bower. According to the place, use a bell or chime of bells, a shower, a ball or number of balls, an umbrella, a canopy, a basket or a cluster of bas-

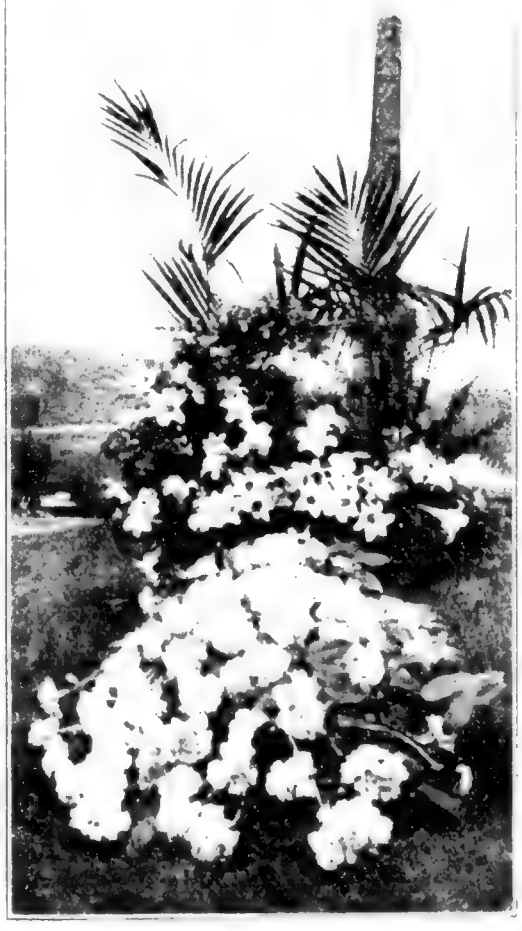
GRAVE DECORATIONS.

A field for business capable of much development is that of grave decorations. Did you ever notice in the daily papers of the big cities, that at the head of the obituary column there frequently is a space devoted "In Memoriam" to those who died on that date in years gone by? Actuated by the finest of sentiments, people pay good money for the privilege of printing there verses dedicated to their departed relatives. How much better that they should lay flowers on the graves!

The accompanying illustrations show two views of a grave decoration arranged by the Bell Floral Co., Franklin, Pa. The family wished to show its remembrance of the birthday of the deceased and took this excellent way of doing it. The florist made a large flat bunch of Enchantress carnations and Sprengeri, large enough to cover the entire grave. This was placed with the tip of the spray at the foot of the grave. At the head there stood a large basket of lilies and variously colored antirrhinums, backed by palms and ferns. The illustrations show two views.

Sentimental persons can find innumerable occasions for the use of such decorations; anniversaries of birth, marriage, death, etc., and there can be no better public manifestation of unforgetfulness.

In winter when the weather makes it undesirable to use cut flowers for such a purpose, a design of boxwood, or leucothoe, or laurel may be used. The widow of one of Chicago's leading citizens at Christmas each year places on his grave a great cross of boxwood.



VARIETY IN FLORAL WORK.

Beware of Monotony.

It is all very well to have favorite styles in flower arrangements, but to have one favorite style is all very ill. To have an individuality is an enviable distinction, but to keep thrusting any one creation continually before the eyes of the public marks the designer as a shallow faddist. One design for a pillow, one for a wreath, one for a star, one for a crescent, and so on down the list, is better, of course, than one fashion for all, but dozens of ways for each is the introduction to hundreds of ways for each.

Every house to be decorated is worthy of a design of its own. Some features, of course, may be repeated, but this thing of contracting and expanding the same scheme for wide and narrow doors and high and low ceilings is creditable to a hack. Any building of character should be studied and understood, and in attempting to decorate it the designer must fall in with and follow the architectural lines, just as he should follow the design lines of a simple funeral piece.

By this is not meant that he must always outline a mirror frame or a window, but that he must not ignore its place and style, any more than he must load it with decorative material to hide it completely. In festooning a mirror he will remember to return to base occasionally; that is, to catch his garland to one of the corners, and not roam "any old way" across the surface of the glass.

Anniversary Decoration of Grave.

Discovering New Ways.

His first venture in this field will not be the only route by which he will travel in the future, but he will find new ways each time, and by conforming to the lines of the building will find himself not in bondage to a rule, but free, with ever widening opportunities. Discovering new ways does not come by working the same old scheme "just this once" to save time, but by discerning the form and plan and adding touches to further develop the picture.

A selective study of the various furnishings of a house is not a difficult matter. A wide awake person would not set a full, heavy vase of American Beauties on a slender, spindle legged table, but he would choose a slender vase of delicate tinted roses for it, while he would cast about for a massive mission piece on which to rightly display the Beauties.

In Harmony With the Furnishings.

If called upon to decorate a mantel in a bungalow where the findings were uncut stone, the discriminating person would add a twig or birch basket, with brakes and wild flowers. Or, if it were in order to decorate a fairy like mantel of elaborate carving, he would bring out a cut glass basket or crystal bowl, filled with daintily colored hothouse beauties.

A stairway finished with slender banisters in white may be interwoven with dainty strands of green, while a massive, broad staircase, with a heavy newel post, will require plants of expansive foliage and generally ponderous appearance. If a wide hall corner is to be screened off for musicians, it may be properly done by the use of large foliage plants, but for a narrow passageway, so often reserved for the musicians' corner, try a curtain of diamond shaped meshes of smilax, broken at one side by a tall vase of a half dozen or so specimen flowers. It looks reasonable to place a long, slender centerpiece on a long table, rather than a solidly built one in the center, crowding the middle section of the table and leaving the ends with no decoration.

The Wedding Bower.

There is no best way to decorate a wedding bower. According to the place, use a bell or chime of bells, a shower, a ball or number of balls, an umbrella, a canopy, a basket or a cluster of bas-

Spray of Carnations to Completely Cover a Grave.

kets, a straight wall of ferns, a cluster of festoons, a sunburst of color or a wild corner, a corner of palms or a soft fabric drapery as a background for a single stately vase, a hedge of American Beauties; a group of graduated sizes in palms, on one side reaching to the ceiling and on the opposite side a low group with festoons connecting; a gateway, an arch, a screen of daisies or mums, a large decorated mirror.

If the room is low, stretch out high festoons to distant points; or, if it is barny and vacant, group palms in deep arches. If the church is chanceled, penetrate to the altar with the decorative lines and venture to the distant points on the chancel rail.

The Bride's Bouquet.

For different wedding ceremonies and conditions, adopt the kind of bride's bouquet which common sense seems to dictate. For an elaborate church or fashionable home wedding have a shower bouquet elaborate enough to grace the gowns and surroundings, but vary the style of shower. It may be of streamers of green or all ribbon, or the two combined; the shower may be of all ferns or ferns and flowers mixed. It may be without a top, or a wrist shower, a prayer-book shower, a fan shower, or a butterfly shower.

Different flowers require different treatment even for a shower. Long sprays of swainsona, tied together so as to fall outward from the stems, make a beautiful natural shower, as would long spiræas, white rambler roses or bridal wreath.

There are endless combinations to be made with roses for the shower. Most commonly seen are valley, violets, peas, daisies, swainsonas and freesias. Other combinations, for a daintier bouquet, are violets and valley, violets and peas, valley and orchids, violets and orchids, valley and gardenias, valley and Bride gladioli, daisies and peas.

The Arm Shower.

Then there is the arm shower, which is a loose bunch of long-stemmed flowers with a shower extending from the elbow to the wrist. Roses with valley, or any of the combinations with roses suggested above, are excellent. For a rarer combination, Easter lilies or candidums with a valley shower have been used stunningly for a church wedding. Daisies make a beautiful informal arm bunch, with a shower of the same. This is the only easy way to carry a mum bunch. This latter style of arm bouquets can be used with or without ribbon, scarf or sash.

Still another style of bride's bouquet is the arm garland, or chain of roses hanging over the arm and down against the skirt. No tie is needed for this. A few butterfly bows can be added. This is an especially good style for an outdoor wedding.

Let One Style Suggest Another.

In all of the different fields of design, one thing suggests another. While making a centerpiece of Von Sion daffodils, it occurs to you that a piece of a number of kinds of the interesting narcissus family would make a charming variety, grading from a clear white into the creams, thence to the canary tints and finally to the deep orange, using their own foliage only. This color blend is at its best in daylight only. Then there are the broken and imperfect specimens. Open them out flat and lay them just under the edge of the lace centerpiece, so that the edge of the petals forms a frill around the outline of the lace piece. Or if there are rose petals of one variety, scatter them in some pretty design on the table about the centerpiece.

It is just so in every department of this branch of design. One style of mantel decoration will evolve from another; one mode of tying a funeral spray will make you think of something else. The first few original styles practically win the battle, for the more you originate, the wider becomes your capacity in this direction—not by trying to be novel, but by studying form and color and trying to classify and arrange their modifications until the immensity of the subject appalls you. Welcome changes, for which you have not tried, break in upon your imagination. It is ever true, "To them that have, shall be given," and the abundance of the giving depends upon the amount of interest displayed in the feast of color and form which is spread continually before our eyes.

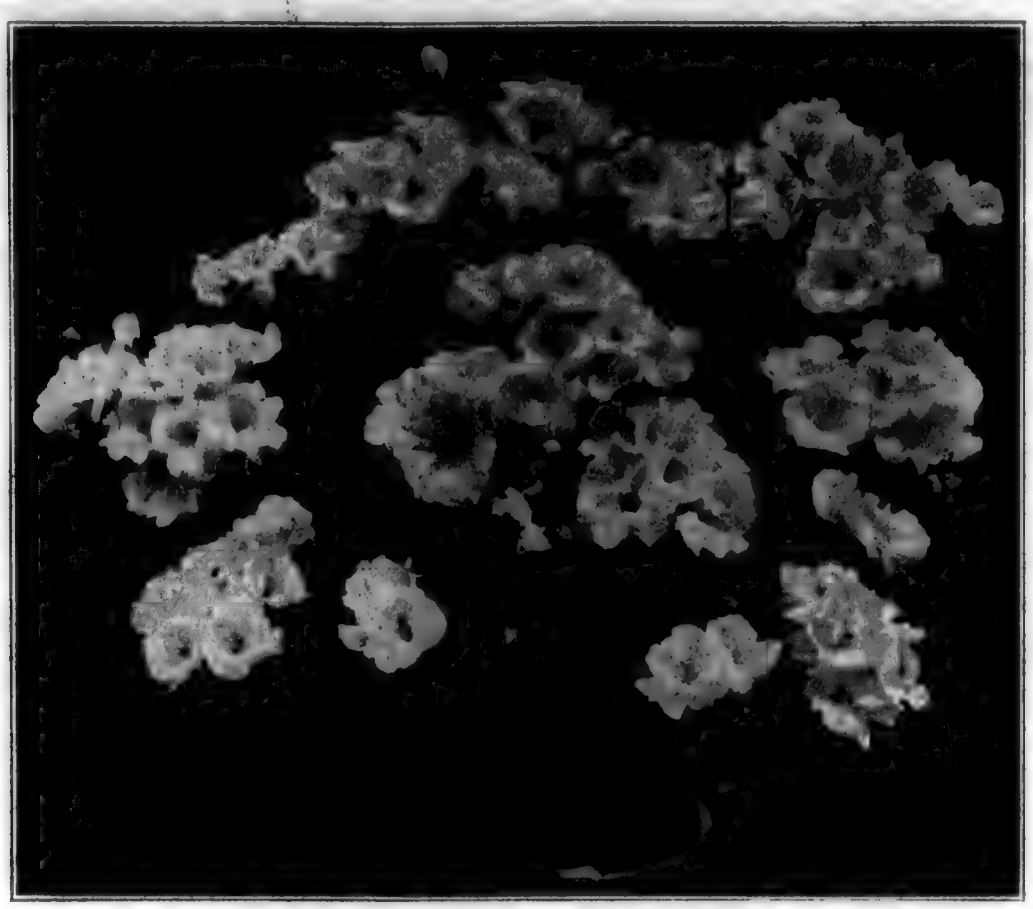
SHOW PELARGONIUMS.



Deserve Greater Popularity.

While less popular in America than the zonal pelargoniums, owing to our hot summers, there would seem to be no good reason why more of the show and decorative section could not be grown and disposed of by commercial growers, provided good varieties are secured. A well grown batch of Lady Washington geraniums, to use a familiar title which has been given them here, at once elicits pæans of praise from all who see them, and an expression often heard is, "Why cannot I grow these in my house?"

In Europe they are everybody's plant, being grown in immense numbers for market, and there are few of even the humblest cottagers who do not carry at

Show Pelargonium Mme. Thibaut.

Show Pelargonium Duchess of Teck.

least one of these pelargoniums in their collections of window plants. Thanks to cooler summers, the flowering period in Europe is more prolonged than here; still, we can get two months of bloom from them here, which is far more than an azalea, rambler rose, genista, spiræa, Easter lily or acacia will give. By adopting proper cultural methods they can be flowered for Easter. Or, if preferred, they can be held back for Memorial day or even later. And, by the way, at this latter holiday anyone having a good retail trade, even if he cannot sell all his plants, can make good use of the trusses in bouquet or other decorative work.

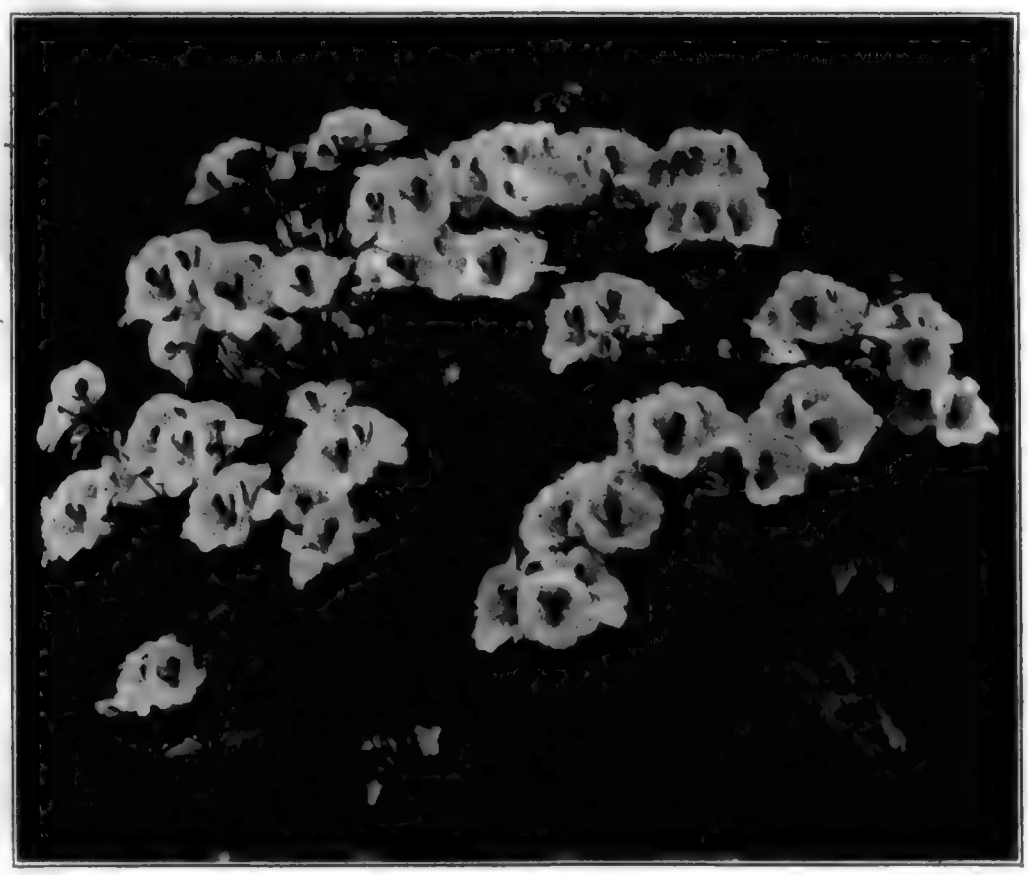
Their Merits and Their Uses.

May and June is the time to see these pelargoniums in full beauty. What a multiplicity of beautiful colorings are represented in them and what a truly gorgeous show they make! Anyone who has not previously grown any should, if possible, see a batch in bloom and take the names of desirable sorts. Where nicely flowered pot plants are wanted, these should certainly find a place. They make a welcome change from the everlasting hydrangeas, which at this season seem to be one of the chief staples, and while they are not adapted for open-air culture, they do finely on piazzas shaded from the sun or in living-rooms. A good plan is to place a number of one color in large, fancy vases, plunged in moss for piazza use. With a little picking over they will last quite a number of weeks in good shape.

After the flowering season the plants should be stood outdoors in a sunny spot. Any flower trusses should be removed and the water supply gradually reduced till the leaves turn yellow. The pots can then be laid on their sides and no water given for some time. Early in August the wood will have become a nutty brown color and the shoots can then be cut back within one or two eyes of the previous year's growth; the plants can be syringed and encouraged to break. When growth is starting, shake them clean out of the pots, prune back the largest roots and place them in as small pots as they can be crowded into, holding them in a coldframe until early October.

Propagation.

Usually florists do not carry any plants over a second year, and this is unnecessary, unless large plants are desired. Cuttings taken any time after flowering, preferably in August, will root easily in a frame. They need little shade. Place in small pots of sandy loam at first and keep rather close for a few days, later airing abundantly. A shift from 2½-inch to 4-inch pots will be necessary by the early part of October, at which time they can be moved, if space permits, to a cool, airy house, kept at 40 to 45 degrees at night. They can, however, be held in a coldframe until the mum season ends, if required. Last season we carried some over winter in an unheated pit, where frost was just excluded. In these cases a slight dryness at the root during midwinter is necessary. For Easter flowering no pinching should be done after November, but for late blooming it can be continued until the end of February. Easter stock should receive its final shift into 6-inch pots before Christmas, but when wanted later the last potting can be deferred until February.



The Compost.

Pelargoniums do well in a compost of three-fourths fibrous loam and one-fourth dry cow manure, adding a good dash of sharp sand. When well rooted in the flowering pots, liquid manure alternated with chemical top-dressings will be found stimulating. The plants require firm potting to encourage short-jointed, firm growth, which will be floriferous.

Green aphis has a marked partiality for these show and decorative pelargoniums, but if the houses get a weekly fumigating, the pest will be kept in check. Be sure not to use tobacco stems while the plants are in flower. The smoke from these will cause all the petals to fall. Occasionally red spider attacks the foliage where plants are grown too warm and dry, but as these plants dislike a high temperature and should never have a winter minimum of over 50 degrees, there should be little trouble from this source.

Some Good Sorts.

Out of a host of beautiful show and decorative pelargoniums the following can be recommended as first-class: Lord Roberts, rich, rosy red; J. Douglas, rosy pink, white center; Captain Raikes, bright crimson, dark blotch on upper petals; Mme. Thibaut, a first-class old variety, white heavily blotched and marbled with rose; Duchess of Teck, the finest pure white, probably a sport from Mme. Thibaut; Countess of Crewe, satiny rose, finely crimped; Crimson King, brilliant crimson, stocky habit, just the color in demand for Memorial

Show Pelargonium Gloriosa.

kets, a straight wall of ferns, a cluster of festoons, a sunburst of color or a wild corner, a corner of palms or a soft fabric drapery as a background for a single stately vase, a hedge of American Beauties; a group of graduated sizes in palms, on one side reaching to the ceiling and on the opposite side a low group with festoons connecting; a gateway, an arch, a screen of daisies or mums, a large decorated mirror.

Show Pelargonium Gloriosa.

day; Gloriosa, white, blotches on upper petals; Galatea, a grand variety, fringed white, marked and streaked pink, blotches on upper petals; Lord Carrington, purple mauve, blotched with crimson lake; Alice M. Love, salmon rose; Persimmon, orange scarlet; Volonte Nationale alba, pure white. Some of these are shown on pages 4 and 5.

The plants from which the photographs were taken were grown from cuttings taken in August, 1908. They were in 6-inch pots and about nine months old when photographed. W. N. Craig.

SEASONABLE SUGGESTIONS

Antirrhinums.

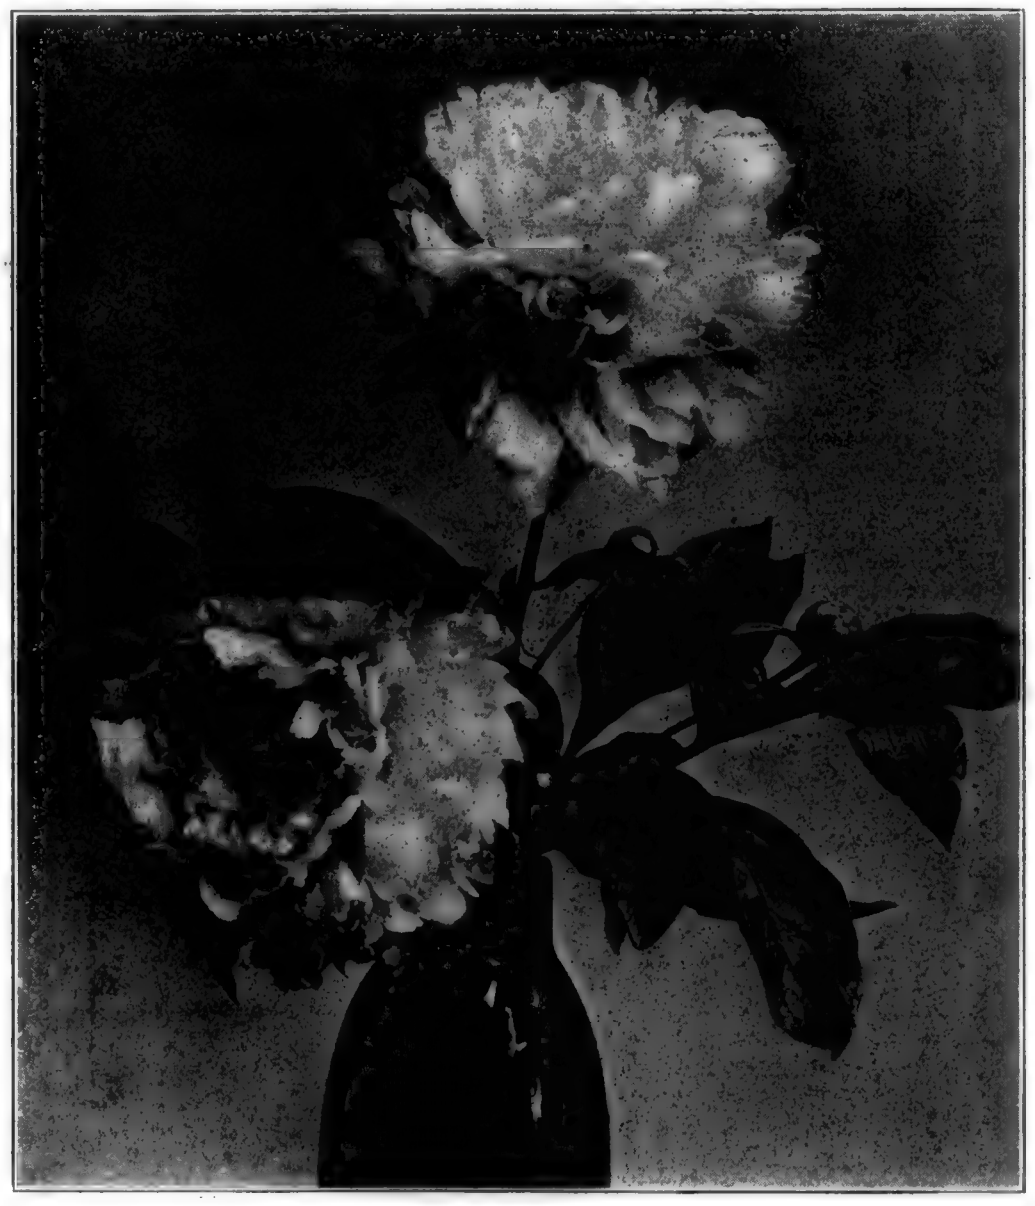
A batch of antirrhinum cuttings should now be available from plants which have been growing outdoors for some weeks. At this hot season these will require an abundant water supply to prevent wilting. If rightly cared for, they should be rooted and fit to pot off within three weeks. They will be stockier and better in every way if kept in a coldframe after being potted. A further shift can be given to 4-inch pots when necessary and you will have nice plants to take the place of the early mums. When pinching, it is always better to let the flower stems run up and become fairly hard. The plants will then break more strongly than if you merely remove the soft tops of the shoots.

Any plants now in small pots may be planted out in rows in the field, allowing eight inches between the plants. Keep them well pinched back and the soil constantly stirred. Lifted in early fall in the same way as carnations, these will produce a splendid lot of strong shoots for flowering in midwinter. As a rule, seedling plants are more vigorous than those raised from cuttings, but to secure an even, first-class strain the latter method of propagation is necessary. Cuttings taken from outdoor grown plants are to be preferred to those procurable under glass at this season.

Hydrangea Arborescens.

We were pleased to see the article on this early and persistent flowering hydrangea in last week's issue of the Review. It cannot be forced as early as H. Otaksa, but flowers a couple of months earlier than H. paniculata grandiflora, being in full flower outdoors the first week in July. This variety, while fairly well known now in America, has been overlooked as a market pot plant. It is so different from the other hydrangeas that it would make a valuable addition, both at Easter and Memorial day. The flower heads, as the illustration shows, are round and medium sized. They are also pure white in color and every florist doing any design work should possess himself of a few plants, if not for pot culture, for the open ground. This hydrangea is perfectly hardy and destined to become extremely popular.

Cuttings of half ripened wood, taken now, will soon root and make nice little plants by fall. We rooted some a little over three years ago. These are now nice bushes outdoors, carrying an average of seventy-five heads each. We intend forcing some another season, believing that it will take with the public. A number of firms now offer this hydrangea and it will pay wide-awake commercial growers to secure some stock of it. The price is now quite low.



Hydrangea Otaksa.

Easter comes unusually early in 1910, and to have hydrangeas in flower by the end of the month the plants should be pot grown all summer, ripened early and fit for forcing in December. Look after the young stock and see that they are not allowed to become potbound. The present is a suitable time to move early spring rooted stock into 6-inch pots. Give them the sunniest possible spot. If partially plunged in coal ashes, they will require less water. Plants not needed in bloom before Memorial day will be just as well in the open ground. In hot, dry spells if they are within reach of the hose, all the better. Lifted and potted about the first week in October, they will be excellent for late spring sales, but will not have the wood ripened for early forcing, as the pot grown plants have.

Rambler Roses.

To have rambler roses in good condition at Easter, it will be necessary to have thoroughly ripened canes in late fall. To insure proper maturing of the wood, the shoots must not be allowed to ramble over the ground, but be kept tied up. Plants grown indoors for some time will now have canes several feet long. As the bench space they have heretofore occupied may be wanted for some other crop, the plants can be placed outdoors. Plunge the pots to the brim and see that the shoots are securely staked. To insure cleanliness from spider and aphis, use the hose freely. As the pots become filled with roots afford some liquid stimulants.

Plants in the open ground, especially of the pink varieties, which have a naturally procumbent habit, will require considerable attention, or the shoots will soon become inextricably interwoven. If not already done, drive in a few stout posts and run stout twine or wire a foot apart to tie them to. Limit the number of shoots to three or four strong ones per plant, rubbing off any which will constantly be starting from the bottom. Tausendschon will be much grown for Easter next season. So far it does not grow so strongly as the other ramblers. Leuchstern also comes rather dwarfer, but seems destined to become

Peony Eugenie Verdier.

popular. Lambert's new, pure white rambler, Trier, which shows its golden anthers prominently, is also likely to be a great favorite in 1910.

Freesias.

The first arrivals of freesias are coming to hand and a batch should be placed in pans or flats without delay. Probably many country florists annually grow their own bulbs. This is easily done by sowing a few flats of the small bulblets moderately thick each season. These will develop into good sized flowering bulbs for the next season, but it hardly pays to carry over bulbs a second year, when the growth is cut away to the soil to give the necessary length of stem to the flowers; even if the bulbs are large, they will not amount to much the following season.

The best freesias we have ever seen were grown in 10-inch and 12-inch pans and stood on shelves in a carnation house to flower, saucers being used to assist in keeping the compost moist. Flats four inches deep are also suitable. A good soil consists of one part rotted cow manure to three parts fibrous loam, adding a little leaf-mold and plenty of sand. Do not use any bone or chemical fertilizer. Water well and place in a frame where they can be darkened. No more water will be required until growth starts.

The Compost Pile.

A common sight during the summer months in florists' establishments is a mass of rank looking weeds, which being examined are found to come from the compost pile, carefully prepared the previous fall or early spring. It is no uncommon occurrence to see scythes called into requisition to mow down the vigorous weeds, in order that the loam can be reached at all. This is poor policy. The weeds are extracting the nourishment from the soil intended for your greenhouse plants, and it is surely just as necessary to keep the compost pile clean as the land where your crops are growing.

Some growers are already preparing to plant their carnations and, where such early lifting is done, it behooves us to have the soil ready for the benches. The compost should be chopped down and turned over, to thoroughly mix the manure and loam. A dressing of fine bone can still be given, although this would have been better applied six weeks ago. Probably your mums are all planted, or soon will be, but it will not be long before the bulbs arrive and it is time to prepare a pile for them. Do not add any bone for bulbs, however. There is no better fertilizer than old, thoroughly decayed manure, the kind which will crumble up in the hand.

Brief Reminders.

Transplant digitalis, campanulas and other biennials on cloudy days when the ground is moist.

Look over the bouvardias in the field and pinch out the tops of the shoots.

Lay show pelargoniums on their sides to allow the wood to become thoroughly ripened.

Keep a moist atmosphere among palms, and hose the foliage freely twice a day.

Cultivate all outdoor crops constantly, especially after rains. Plants will not thrive in baked soil.

It is too early to sow pansies or myosotis, but not too late to start many other perennials and biennials.

Ficus elastica, crotons, dracænas and dieffenbachias can be easily rooted by ringing and mossing the tops now. Keep the moss constantly wet.

Cuttings of Hydrangea paniculata and arborescens will root freely now in a close frame.

Sowings of Shirley poppies, sweet alyssum, candytuft, mignonette and clarkia can still be made outdoors.

Save seeds from the best aquilegias and sow as soon as gathered.

See that begonias, gloxinias, tydæas, gesneras and achimines have necessary shade to prevent burning of the foliage.

Cut the gladioli as soon as the first flowers open. The others will expand in water.

Pick sweet peas when the flowers are dry, to prevent spotting. Keep seed pods carefully removed.

Put supports to some of the later dahlias. The dwarf varieties will hardly need any.

Get bench repairs pushed ahead as soon as the old compost is wheeled out.

Peony Eugene Verdier.

THE VERDIERS.

Illustrated in this issue are the two peonies, Eugene Verdier and Eugenie Verdier, each raised by the celebrated Frenchman, Calot, of which John M. Good said in the REVIEW of June 24:

"Eugene Verdier—Strong, vigorous grower; enormous buds and flowers; in color resembles Albert Crousse; it being a late bloomer, the rains caught it and some of the buds were scalded and did not open properly; when well done is grand.

"Eugenie Verdier—This is the variety that the Hollanders grew for years as L'Indispensable; then they thought it was Eugene Verdier, and when they found the true Eugene Verdier they discarded this variety altogether, not knowing what it was. How foolish! It will make Eugene Verdier step some to eclipse it. It is a strong grower, free bloomer, flowers of immense size, delicate blush, almost white, and blooms a week earlier than the male namesake. It has waterlily-shaped flowers, while Eugene Verdier is globular. A most superb variety, distinct and beautiful."

SELECTION OF PEONIES.

I intend to grow a small patch of peonies. Kindly name the best six varieties, mostly white and pink. When is the best time to plant them and how far apart? C. M.

The best time to plant peonies is in September. The ground should be well enriched and deeply plowed. Plant in rows four feet apart and allow three feet between the plants, where they are to remain several years. The following varieties are inexpensive and strictly first-class: White, Festiva Maxima, Mme. de Verneville, Baroness Schroeder, Mons. Dupont; rosy pink, Duchesse de Nemours (Guerin), M. Jules Elie, L'Esperance; dark red, Mons. M. Cahuzac; light pink, Marguerite Gerard, Pottsi alba (Eugene Verdier) and Mme. Emile Lemoine. The foregoing varieties do not all flower at one time, a consideration if they are wanted for cutting.

W. N. CRAIG.

NEW ROCHELLE, N. Y.—W. S. Hitchcock, Inc., is the name of a corporation formed July 1, with a capital stock of $15,000, to do a retail flower business. The incorporators are Wilbur S. Hitchcock, Frank Davidson and others.

SPIDER ON VIOLETS.

I planted my Princess of Wales in the open about May 15, in a rather heavy piece of land, with a good coat of horse and cow manure plowed in. I divided the old clumps about the end of March and planted the rooted runners in a cold-frame, where they made good, fresh roots and nice, green foliage. Now they are all turning yellow with the red spider. I would be glad if you could advise me of a spraying solution to exterminate that pest. I have tried nicotine, the same strength as for green and black fly, but it does not seem to do any good. My water tank is only fifteen feet from the ground. I guess I would not get enough pressure to dislodge the spider. I have heard of a solution of a certain amount of salt in water, for killing spider. How strong should it be used? C. M.

It is a difficult, if not impossible, task to clean out red spider on violets and carnations grown in the open. Under glass some carnation growers spray their plants once a week with salt and water, two tablespoonfuls of salt to three gallons of water. The same has been tried on violets, with good results. It is necessary to wet the under side of the leaves, which is no easy task in the case of violets. Another remedy recently recommended for red spider is a solution of sulpho-naphthol, at the rate of a wineglassful to three gallons of water. There would be no harm in trying both remedies. Neither will injure your plants and each may prove helpful. While the appearance of your plants may now be discouraging, your case is by no means an exceptional one, and there is ample time for them to grow into good clumps before housing time. The real growth of violets is not made until the cool fall nights come along. C. W.

PECKY CYPRESS.

Philip J. Foley writes the Review as follows:

"It has been called to the writer's attention that there is being offered for sale pecky cypress which comes from the middle states, and which has not the lasting qualities of the Louisiana red or gulf pecky cypress.

"As to the lasting qualities of the Louisiana red or gulf pecky cypress there is no question. Such concerns as Bassett & Washburn, Hinsdale, Ill.; Poehlmann Bros. Co., Morton Grove, Ill.; Emil Buettner, Park Ridge, Ill.; Peter Reinberg, Chicago, Ill.; J. F. Wilcox, Council Bluffs, Ia.; A. Graham & Sons, Cleveland, O.; J. Breitmeyer's Sons, Mt. Clemens, Mich.; Wm. L. Rock Floral Co., Kansas City, Mo.; Griswold Greenhouse Co., Ashtabula, O.; Geo. F. Hartung, Sandusky, O., and hundreds of others too numerous to mention, have used Louisiana red pecky cypress for years, and can attest to its lasting qualities. Some of the above named have used it ten years or more.

"Geo. F. Hartung, Sandusky, O., made a statement at the gardeners' convention in Cleveland last year that, after having been in use in his benches five years, he turned over Louisiana red pecky cypress and found that it did not start to rot anywhere, even at the cross supports.

"Within the last week florists have advised us that when they departed from using Louisiana red peck, and bought that which was offered at a little less money, and in some cases not at a less price, they got a very inferior article, which did not last. It would be a great injustice to any florist to induce him to invest his money in lumber for benches, only to find that instead of lasting ten or fifteen years, it would only last two or three. Experience has taught that Louisiana red peck is the stock that lasts. Can you beat it? If so, we want to know what is better, as the best is none too good to offer to our friends. We believe that florists in buying pecky cypress should insist on getting a guarantee that it is the genuine Louisiana gulf red cypress, or refuse to buy it. There is nothing cheaper on the market today, considering the lasting quality of the wood, than Louisiana red pecky cypress, so why use a cheap substitute that will not last half as long? No matter whom you buy it from, insist on having Louisiana red gulf stock. There are plenty of people to buy it from, and gulf red stock is practically free of sap. Sap will rot out in a very few years, while heart red lasts many years.

"We would like this letter published if it meets with your approval, as we are writing you at the request of people who are interested not only in the welfare of themselves, but of the other florists as well."

The Review would add that lumber dealers not familiar with florists' needs sometimes deliver what the lumber trade knows as random widths; that is, boards of uneven width. Such lumber would be costly if the price were only half that of the uniform 6-inch boards supplied by the firms that make a specialty of florists' trade.

SHOULD PARKS GROW STOCK?

PLANTS FOR BEDDING.

Park Men Discuss Cost.

At the last meeting of the American Association of Park Superintendents someone raised this question:

"Is it more advisable for a park in a small city to own its own greenhouse than to purchase its tender plants from local florists?"

The discussion was of much interest to the park men and their views will naturally be good reading for the florists who grow bedding stock.

"I think it is advisable for any park having a floral display to have its own greenhouse," said Theodore Wirth, of Minneapolis, "and I think every such park ought to have one. In small park systems they ought to have a superintendent who is a good gardener and who knows how to make use of the plants. He can grow what he wants and keep up with the times; he does not need to wait until the local florist wakes up. The local florist will only grow what he is sure to sell, and the progressive park man will grow what is pleasing to the public—something new. They don't want to plant coleus and geraniums every year, and the only way to get out of that is to have a greenhouse."

"Cedar Rapids," said H. S. Keffer, of Cedar Rapids, Ia., "bought its plants and flowers and the last year paid $670. The commissioners built a greenhouse 18x80 feet and raised $1,400 to $1,500 worth of plants. I believe it is a paying proposition for any city to have its own greenhouse for its parks."

A Decided Difference of Opinion.

"Mr. Wirth and I have never agreed on that question," said C. E. Keith, of Bridgeport, Conn. "I believe it is better for a small city or a small department to go out and buy its flowers. In our little town we have all the flowers we want; we have so many that we are the envy of those little suburban towns about us, like Hartford and New Haven. We select the flowers we have and the cost does not exceed $300, and it stands to reason you can't hire a man to grow your flowers for the department for $300. You go to big florists that grow them in large quantities and you can buy them cheaper than you can grow them, and for that reason I have never agreed with Brother Wirth. Brother Wirth has put out as pretty formal work as can be found in the New England states and spent more money than small departments can afford to appropriate."

"It seems to be a settled fact," the president remarked, "that if the amount exceeds $300 it pays better for a park system to have its own greenhouse."

Superintendent Should be Florist.

"I believe I would take issue with Mr. Keith on that subject," said J. W. Rodgers, of Cincinnati. "The proper thing for a small park department to do is to employ as head of the department a thorough florist, and he can bring out more beautiful features in the way of bedding and planting flowers and more or less formal gardening, and if he is a competent gardener and florist he can certainly grow the flowers cheaper than they can be purchased. I have had considerable experience, and I know you have to depend on 100 per cent profit to make a success of the florists' business. The city could save money if the superintendent was also a florist."

"Springfield spends several hundred dollars in buying flowers," said Arthur Hay, of Springfield, Ill. "We are now going to erect a greenhouse, for which

purpose $1,500 has been appropriated. It is my experience, however, that you can buy cheaper than you can grow the flowers. We can go to the local florists and give them a list and buy them at a reasonable figure. It is almost impossible to get just the right kind of a man; he must have other qualifications to be a good superintendent, besides being a florist. As I figure it, it is cheaper to buy than to raise the plants."

Saved One-half by Buying Plants.

"That is the experience of Seattle," said J. W. Thompson. "When I went there they had a small greenhouse and the salary was $900 a year. We adopted the plan of advertising for bids in the fall. We were able to buy the plants at from $800 to $1,000. We bought plants for 2 cents to 2½ cents and upward. We have not the bother in caring for the plants and I figured we saved one-half."

"This matter does not seem to be quite settled," said W. H. Dunn, of Kansas City. "It seems to me to be worth while, no matter how small or large the department, to maintain independence by maintaining a greenhouse, and to that should be added a nursery, as Mr. Wirth says, and you can make your selections and have them adaptable to your purpose and at the same time be independent. I hardly believe it permits of any argument; the saving will be with the department that establishes its own greenhouse and nursery."

"Mr. Dunn is rather out of the controversy," said Arthur Hay, "as we are speaking of small cities. As the expense becomes larger it is undoubtedly cheaper, but where a park system does not make an expenditure of over $500 or $600 a year it would be cheaper to buy than to grow the plants."

The Best, Not the Cheapest.

"Mr. Hay is all the time coming out with 'cheap, cheap,'" said Mr. Wirth. "What the public wants is not the cheapest but the best thing, and they are entitled to it, and the best way to supply the best is to grow it yourself. He says he can order his plants from the local florist. Suppose he orders them in the spring; he has got to take what is left. A good gardener figures out now what he wants for next year. He reads trade papers and gets seeds and cuttings, and next year he has something new to offer. That is where he has the advantage over the man who buys. The commercial grower grows what he can sell. Lots of people find flowers in our parks they cannot get anywhere from the florist. If you want to keep up with the times you want to have your own greenhouse, and if you can't afford to have a greenhouse, make a hotbed."

"If Mr. Wirth's finger," said C. E. Keith, "had gone off when he pointed it at me I would be dead now. Mr. President, I am of the opinion that instead of superintendents giving so much thought to the temperature and the soil that plants require in the greenhouse, it is better for them to hunt up hardier and choicer selections of trees and shrubs. Instead of studying the temperature and other things of different plants in a small park, he had better put in more time in the analyzation of the earth that his trees outside require, and I believe it will pay him better. Instead of giving so much attention to the greenhouse or hotbed, let him learn his trees. The first thing is the vegetable kingdom as it lies hardy outdoors, winter and summer."

"I do not hear any of them, in advocating the buying of things, speak of the after care of a formal display," said W. R. Adams, of Omaha, Neb. "A man has to plant them, take care of them during the winter, plant them out and then attend to taking them in again. Not only that, but Mr. Keith talks about hardy varieties. There are hundreds of them, spiræas, hydrangeas and other hardy plants not in the greenhouse."

"Excuse me," said the president, "but I hope you will not take Mr. Keith seriously."

"I am thoroughly opposed to Mr. Keith's ideas," said Mr. Adams. "It is an expensive luxury, but we can grow hardy stuff in the house."

"I have probably grown more shrubs than Mr. Adams has ever seen," said Mr. Keith. "I was brought up on a 500-acre nursery, and I don't believe there is a man in Minnesota that has grown as many shrubs as I have."

On motion of Mr. Dunn, the meeting adjourned.

Greene's Early Hardy Daisy.

AN EARLY HARDY DAISY.

For the last three years H. H. Greene, Saginaw, Mich., has been growing a hardy perennial daisy which blooms much earlier than the Shasta or Chrysanthemum maximum. His record for the last three years, as to date of flowering, is: 1907, June 8; 1908, May 31; 1909, June 10. "This is not for the first flower," says Mr. Greene, "but for a crop to cut. This year I put a frame and sash over some plants in the end of March and they were in full bloom June 4. The first flower opened Decoration day, and I could have had a full crop by that time if the plants had been carefully watered, as I find they are hard drinkers. The plant is extremely vigorous, much hardier than the Shasta daisy, and the flower lasts well when cut. The stems are from fifteen to eighteen inches long and the plant is wonderfully free flowering, although the blooms are smaller than the Shasta, being from two to two and a half inches across. They can be cut up to the time the Shasta begins to flower and I consider them a decidedly valuable florists' flower. The enclosed photo, though poor, will give an idea of the appearance. It was taken June 19, when the flowers were all fully out and there were over fifty salable flowers on the clump. They sell readily locally."

CHILTON, WIS.—Business is good at Chilton, and W. G. Schucht is the proud father of a twelve-pound boy, born July 1, so everyone is happy.

SPIDER ON VIOLETS.

I planted my Princess of Wales in the open about May 15, in a rather heavy piece of land, with a good coat of horse and cow manure plowed in. I divided the old clumps about the end of March and planted the rooted runners in a cold-frame, where they made good, fresh roots and nice, green foliage. Now they are all turning yellow with the red spider. I would be glad if you could advise me of a spraying solution to exterminate that pest. I have tried nicotine, the same strength as for green and black fly, but it does not seem to do any good. My water tank is only fifteen feet from the ground. I guess I would not get enough pressure to dislodge the spider. I have heard of a solution of a certain amount of salt in water, for killing spider. How strong should it be used? C. M.

It is a difficult, if not impossible, task to clean out red spider on violets and carnations grown in the open. Under glass some carnation growers spray their plants once a week with salt and water, two tablespoonfuls of salt to three gallons of water. The same has been tried on violets, with good results. On motion of Mr. Dunn, the meeting adjourned.

Greene's Early Hardy Daisy.

AN EARLY HARDY DAISY.

For the last three years H. H. Greene, Saginaw, Mich., has been growing a hardy perennial daisy which blooms much earlier than the Shasta or Chrysanthemum maximum. His record for the last three years, as to date of flowering, is: 1907, June 8; 1908, May 31; 1909, June 10. "This is not for the first flower," says Mr. Greene, "but for a crop to cut. This year I put a frame and sash over some plants in the end of March and they were in full bloom June 4. The first flower opened Decoration day, and I could have had a full crop by that time if the plants had been carefully watered, as I find they are hard drinkers. The plant is extremely vigorous, much hardier than the Shasta daisy, and the flower lasts well when cut. The stems are from fifteen to eighteen inches long and the plant is wonderfully free flowering, although the blooms are smaller than the Shasta, being from two to two and a half inches across. They can be cut up to the time the Shasta begins to flower and I consider them a decidedly valuable florists' flower. The enclosed photo, though poor, will give an idea of the appearance. It was taken June 19, when the flowers were all fully out and there were over fifty salable flowers on the clump. They sell readily locally."

CHILTON, WIS.—Business is good at Chilton, and W. G. Schucht is the proud father of a twelve-pound boy, born July 1, so everyone is happy.

CARBOLINEUM IN GREENHOUSES.

In the Review of June 17 I noted an article on "Creosote in Greenhouse Wood." What difference is there between creosote and Carbolineum? In building recently, we treated the posts in the walls with Carbolineum and, in error, we have the Carbolineum two feet above the ground on some posts. Also the 3x3 posts to support the roof were treated with Carbolineum to a height of three inches above the ground. These were set on brick piers. This was done last summer, and we wish to know if it would create a gas, during the heavy weather in the winter, which might be detrimental to carnations. In an adjoining house the posts were treated the same way and we have had more or less trouble with our carnations in this house, but this may have been caused by the flue not being in good working order, allowing an odor to escape from it.

Could you inform us if concentrated lye or muriatic acid could be used in destroying the Carbolineum on the posts, above the ground, or are there any other acids or chemicals which would do this work? A great many growers, however, in this vicinity, treat the parts of the posts under the ground with Carbolineum. W. F. C.

[The Review will be glad to hear from any reader whose experience might be helpful to the writer of the foregoing inquiry.—Ed.]

VARIETIES OF SINGLE TULIPS.

Will you advise me as to an assortment of named single tulips which can be planted together and be uniform in height and of the same flowering period? I find Artus much dwarfer than Chrysolora, and Rose Grisdelin later than either. I should like a good white, pink, yellow and two shades of red, yet not of the most expensive varieties.

H. H. G.

Among the early tulips the following varieties will flower together and be fairly uniform in height: White, White Pottebakker; yellow, Chrysolora or Ophir d'Or; rose, Proserpine; pink, Cottage Maid; orange red, Prince of Austria; Crimson, Couleur Cardinal. All the foregoing are inexpensive. Somewhat higher priced sorts are: Joost Van Vondel, white, the finest white tulip in cultivation; Queen of the Netherlands, soft pink; Pink Beauty, rose-pink flushed white; General Guild (Sir Thomas Lipton), deep scarlet. Cottage Maid will be somewhat shorter than the other sorts named. The light pink tulips, with the exception of Queen of the Netherlands, are rather small and low growing.

Late tulips for bedding are rapidly coming to the front. The following are inexpensive and splendid for bedding: Scarlet, Gesneriana major; yellow, Bouton d'Or and Gesneriana lutea; white, White Swan; bright rose, Shandon Bells (Isabella); blush pink, Gretchen (Darwin variety). Among the named Darwins are many glorious varieties, which far outclass the early ones in beauty. These grow much taller than the ordinary bedding tulips, are splendid for cutting and no one once growing them will be without them. Try one or two sorts and be convinced, as they are on the crest of a big boom in America.

W. N. Craig.

.....BUSINESS AND OTHER NOTES.....

Calla, O.—Sidney Bennett has sold his interest in the greenhouses here and will go to Akron.

Doylestown, O.—C. A. Musser, of the Chestnut Hill Greenhouses, is busy building another greenhouse, 16x86.

Amesbury, Mass.—At the Whittier Club flower show, held at the grounds of the association on Pleasant street, June 24, T. C. Thurlow & Co. had a fine exhibit of peonies.

Cleveland, O.—H. B. Jones and Charles E. Russell have organized the Jones-Russell Co., and October 1 will open a retail flower store at Euclid avenue and Huron road.

Rockville Center, N. Y.—Three boys, all about 15 years of age, were arrested recently for breaking into the greenhouse at the rear of Clarence Ankers' store, in Merrick road.

Meriden, Conn.—R. C. Blatchley, a member of the Blatchley Co., and Miss Fannie C. DuPlessis were married June 23. After a trip to New York state and Canada, they will live in Plantsville.

Irondequoit, N. Y.—Pursell & Cragg Co. has been incorporated to do a general florists' business, with $8,000 capital stock. The incorporators are Frank A. Pursell, of Rochester, Joseph W. Cragg and others.

Clintonville, O.—Conklin Bros., who have grown lettuce, cucumbers and tomatoes under glass for a number of years, have concluded to put a part of their establishment in cut flowers for the approaching season.

Lynn, Mass.—E. F. Dwyer & Sons had a large display of choice peonies at the exhibition held by the Houghton Horticultural Society in the lecture room of the public library, Saturday afternoon and evening, June 26.

Phoebus, Va.—Mrs. Carrie M. Terry, who now has a greenhouse and flower store here, twenty-five years ago was in business at 22 Avenue A, New York city. She says the business has advanced a thousand per cent since then.

Franklin, Pa.—The Bell Floral Co. recently went to Oil City to put up one of the largest wedding decorations ever required there. It included the decoration of Christ church and the large residence of Samuel Y. Ramage. The decoration received a half column notice in the Oil City Derrick.

Chillicothe, Mo.—A recent storm destroyed the large smokestack at the greenhouses of R. L. Isherwood and he intends to build another of brick. He also suffered a loss of $150 by broken glass. He has had a splendid business this season. Besides his greenhouses, he owns nine acres of land.

Akron, O.—Trade here seems to have been good this season. There has been a great deal of complaint about the water furnished by the city waterworks. There is something in it that is injurious to plants; it seems to stunt the growth and injure the foliage. There has been quite a loss among those using city water.

Memphis, Tenn.—The Buseck Floral Co. has been incorporated, with a capital stock of $25,000. The incorporators are J. W. Proudfit, W. E. Gage, W. M. Ball, J. Goldsmith, L. N. Starke, W. B. McLean, W. E. Pipkin and Otto Buseck.

St. Paul, Minn.—There were 227 entries at the rose and peony show of the exhibition of the Minnesota Floral Society June 25 and 26. Most of the stock came from amateurs, but the Jewell Nursery Co., Lake City, and other trade growers were represented.

Kearney, Neb.—Outdoor roses here are suffering more than usual from the depredations of the rose bug, which is literally eating up the buds and flowers. H. L. Hunt, of the Kearney Floral Co., has been kindly giving suggestions to the public as to the extermination of the pest.

Fremont, Neb.—C. H. Green has completed the work of tearing down the old greenhouses and has begun the erection of the new ones. Larger ones will be put up, with modern devices for heating and ventilating. When completed there will be 28,000 square feet of glass, an increase of about 10,000 square feet over what was in the old buildings.

Minneapolis, Minn.—The Minnesota State Florists' Association will hold its first annual picnic at Big Island park, Lake Minnetonka, July 15. An invitation has been sent to every florist in the state. There will be a complete program of sports, the committee of arrangements being A. S. Swanson, E. Nagel, C. N. Ruedlinger and E. P. Holm.

Greenville, Ill.—D. H. Zbinden, senior partner of the firm of Zbinden & Corboz, has sold his half interest to Mr. Corboz, on account of ill health. Mr. Zbinden, however, has bought the W. D. Donnell property, on East South street, where he will erect a greenhouse alone, for begonias, lettuce, mushrooms and carnations. Mr. Corboz will also continue on the Martin property.

Manchester, Mass.—The rose garden on the Spalding estate has been open to the public for several days and attracted large numbers of visitors. It includes 3,000 plants in over 500 varieties, a large proportion being hybrid teas. Mrs. H. L. Foote, of Marblehead, Mass., laid out and planted the garden and has charge of the same. She makes a specialty of planting and caring for rose gardens, importing the bulk of her stock.

Camden Station, Ky.—"We have had the most prosperous year in our times," said George O. Klein, manager of the Sunnymount Nursery & Floral Co. "We sold out of every blooming thing." Geraniums were in such large demand that they sold out so closely they have no stock plants left, and many orders had to be refused. The season has been so wet that people have kept right on planting long after the season usually ends. This has been an exceptional year for cauliflower in the gardens, for it does not usually do well here. Shrubbery has bloomed more perfectly than for many years and it will go a long way toward making business for the fall planters.

NATIONAL SWEET PEA SOCIETY.

Meeting for Organization.

The sweet pea interests of America formed a national organization at New York July 7 by the election of the following officers:

President—Harry Turner, Port Washington, L. I., N. Y.

Vice-president—W. H. Waite, Tarrytown, N. Y.

Secretary—Harry A. Bunyard, 342 West Fourteenth street, New York, N. Y.

Treasurer—Wm. Duckham, Madison, N. J.

Executive committee—W. Atlee Burpee, Philadelphia; A. C. Zvolanek, Bound Brook, N. J.; Wm. Sim, Cliftondale, Mass.

An Auspicious Start.

It was a comparatively few weeks ago that H. A. Bunyard conceived the idea that the time was ripe for the formation of an organization to work along lines similar to those on which so much of benefit has been achieved in England. That he was not mistaken was shown by the ready response to the request for premiums and by the gathering of twenty-five enthusiasts at the Museum of Natural History at the hour appointed for giving the society an auspicious start.

Prof. John Craig, of Ithaca, N. Y., occupied the chair and read a paper on "The Purposes of Trial Grounds."

By-laws were adopted, so that the society is fully organized and ready for business.

A banquet was held Wednesday evening, July 7, and the meeting and exhibition closed July 8.

The Exhibition.

Considering all things, the initial exhibition was an excellent one. The number of exhibitors was not so large as had been expected, but the eight competitors staged upwards of 1,500 vases in over 100 varieties. Harry Turner, president-elect and president of the New York Florists' Club, had eighty-four varieties. Peter Henderson & Co., New York, exhibited over 100 varieties of sweet peas, but not for competition. The exhibits occupied three tables each 100 feet in length. The room was handsomely decorated.

The peas were of generally excellent quality. The best varieties were thought to be Nora Unwin, Frank Dolby, Mrs. Eckford, Pink Spencer, Yellow Spencer, Helen Lewis, Lady Hamilton, Black Michael and Gladys Unwin.

The Awards.

The judges were Wm. Sim, Cliftondale, Mass.; A. C. Zvolanek, Bound Brook, N. J., and G. W. Kerr, Philadelphia. The awards were:

Largest collection of sweet peas, Boddington cup, to Harry Turner, gardener for Howard Gould, Port Washington, L. I.

Largest collection of sweet peas, Burpee cup, to Wm. Duckham, Madison, N. J.

Twenty-five vases distinct varieties, Henderson cup, to W. W. Rawson & Co., Boston.

Twelve vases distinct varieties, Rawson silver medal, to Chas. R. Hedden.

Six vases distinct varieties, Stumpp & Walter prize, Hon. Seth Lowe.

Ten vases Spencer or Unwin flowered, Dreer prize, Hon. Seth Lowe.

Six vases in six varieties, Morris County Gardeners' prize, Wm. Duckham first, Seth Lowe second.

Largest collection, open to trade only, Morse cup, to Arthur T. Boddington, New York.

Fifteen vases in fifteen varieties, Thorburn prize, Hon. Seth Lowe first.

Spencer type introduced in 1909, Burpee prize, W. W. Rawson & Co. first.

Three vases varieties disseminated in 1909, Watkins & Simpson prize, Wm. Duckham first.

Vase mixed varieties, Michell prize, to T. S. Ormiston.

Three vases in three distinct colors, Pierson prize, Hon. Seth Lowe first, W. W. Rawson & Co. second.

Twenty-five stems lavender, Florists' Exchange prize, Hon. Seth Lowe.

Vase crimson, Young prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second, T. S. Ormiston third.

Vase white, Rice prize, Hon. Seth Lowe.

Vase blue, Fiske prize, Hon. Seth Lowe.

Vase light pink, Turner prize, T. S. Ormiston.

Vase orange shade, Traendly prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second.

Vase yellow, Totty prize, W. W. Rawson & Co.

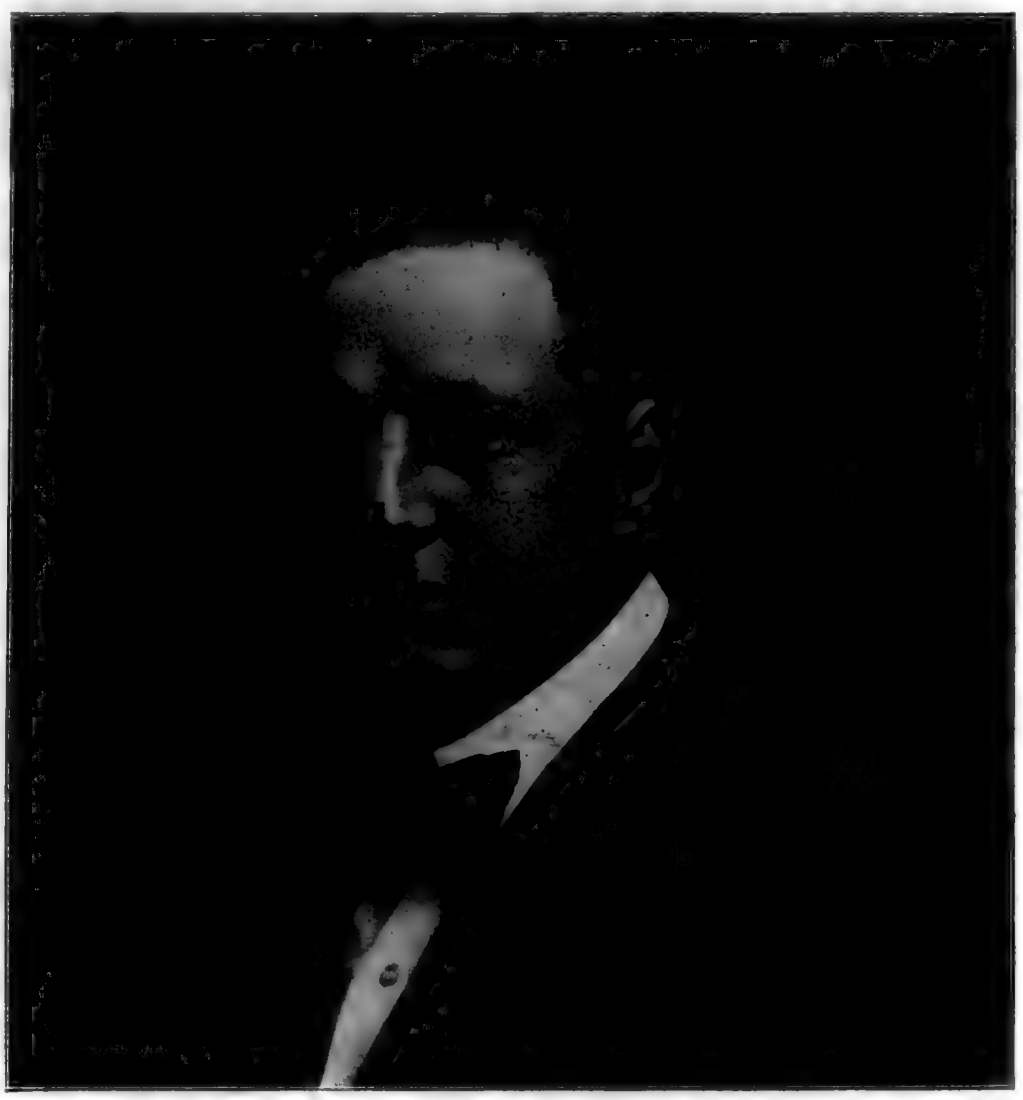
Vase bicolor, Boddington prizes, W. W. Rawson & Co. first, Hon. Seth Lowe second.

Miscellaneous Exhibits.

There were a number of miscellaneous exhibits, each of which was given special mention, as follows:

Julius Roehrs Co., Rutherford, N. J., orchids and decorative plants.

John Lewis Childs, Floral Park, N. Y., irises and pink callas.



Lager & Hurrell, Summit, N. J., table of orchids.

W. A. Manda, South Orange, N. J., table of orchids.

Palisades Nurseries, Sparkill, N. Y., thirty varieties flowers, of hardy herbaceous plants.

Harry Turner, Acalypha Sanderiana.

The Rosery, table decoration of sweet peas, one of the most attractive features of the show.

Harry A. Bunyard.

Chairman Committee of Arrangements for the New York Florists' Club Outing and Prime Mover in the Organization of the National Sweet Pea Society

SPRAYING FOR WEEDS.

The eradication of weeds by other than cultural methods has been a subject of study at a number of the agricultural experiment stations and elsewhere. This has resulted in the discovery that various chemicals through their corrosive or other action will destroy many kinds of weeds. As long ago as 1895 it was shown by the Vermont Experiment Station that the orange hawkweed, a pest in lawns and pastures, could be controlled by sowing salt over the lawns at the rate of about 3,000 pounds per acre without injury to the grass.

Lime, salt, arsenite of soda, gasoline, kerosene, crude carbolic acid, and copper sulphate have all been recommended for destroying weeds in drives, walks, tennis courts and other places where it is desired to keep down all plant growth.

SOUTH ORANGE, N. J.—It is said that Louis Becker owns a cat that has "mothered" a chicken waif while raising offspring of her own. The chicken has grown so large that Mr. Becker does not want it about the house, but he is having a hard time keeping the pets apart.

CARBOLINEUM IN GREENHOUSES.

In the Review of June 17 I noted an article on "Creosote in Greenhouse Wood." What difference is there between creosote and Carbolineum? In building recently, we treated the posts in the walls with Carbolineum and, in error, we have the Carbolineum two feet above the ground on some posts. Also the 3x3 posts to support the roof were treated with Carbolineum to a height of three inches above the ground. These were set on brick piers. This was done last summer, and we wish to know if it would create a gas, during the heavy weather in the winter, which might be detrimental to carnations. In an adjoining house the posts were treated the same way and we have had more or less trouble with our carnations in this house, but this may have been caused by the flue not being in good working order, allowing an odor to escape from it.

Could you inform us if concentrated lye or muriatic acid could be used in destroying the Carbolineum on the posts, above the ground, or are there any other acids or chemicals which would do this work? A great many growers, however, in this vicinity, treat the parts of the posts under the ground with Carbolineum. W. F. C.

[The Review will be glad to hear from any reader whose experience might be helpful to the writer of the foregoing inquiry.—Ed.]

VARIETIES OF SINGLE TULIPS.

Will you advise me as to an assortment of named single tulips which can be planted together and be uniform in height and of the same flowering period? I find Artus much dwarfer than Chrysolora, and Rose Grisdelin later than either. I should like a good white, pink, yellow and two shades of red, yet not of the most expensive varieties.

H. H. G.

Among the early tulips the following varieties will flower together and be fairly uniform in height: White, White Pottebakker; yellow, Chrysolora or Ophir d'Or; rose, Proserpine; pink, Cottage Maid; orange red, Prince of Austria; Crimson, Couleur Cardinal. All the foregoing are inexpensive. Somewhat higher priced sorts are: Joost Van Vondel, white, the finest white tulip in cultivation; Queen of the Netherlands, soft pink; Pink Beauty, rose-pink flushed white; General Guild (Sir Thomas Lipton), deep scarlet. Cottage Maid will be somewhat shorter than the other sorts named. The light pink tulips, with the exception of Queen of the Netherlands, are rather small and low growing.

Late tulips for bedding are rapidly coming to the front. The following are inexpensive and splendid for bedding: Scarlet, Gesneriana major; yellow, Bouton d'Or and Gesneriana lutea; white, White Swan; bright rose, Shandon Bells (Isabella); blush pink, Gretchen (Darwin variety). Among the named Darwins are many glorious varieties, which far outclass the early ones in beauty. These grow much taller than the ordinary bedding tulips, are splendid for cutting and no one once growing them will be without them. Try one or two sorts and be convinced, as they are on the crest of a big boom in America.

W. N. Craig.

.....BUSINESS AND OTHER NOTES.....

Calla, O.—Sidney Bennett has sold his interest in the greenhouses here and will go to Akron.

Doylestown, O.—C. A. Musser, of the Chestnut Hill Greenhouses, is busy building another greenhouse, 16x86.

Amesbury, Mass.—At the Whittier Club flower show, held at the grounds of the association on Pleasant street, June 24, T. C. Thurlow & Co. had a fine exhibit of peonies.

Cleveland, O.—H. B. Jones and Charles E. Russell have organized the Jones-Russell Co., and October 1 will open a retail flower store at Euclid avenue and Huron road.

Rockville Center, N. Y.—Three boys, all about 15 years of age, were arrested recently for breaking into the greenhouse at the rear of Clarence Ankers' store, in Merrick road.

Meriden, Conn.—R. C. Blatchley, a member of the Blatchley Co., and Miss Fannie C. DuPlessis were married June 23. After a trip to New York state and Canada, they will live in Plantsville.

Irondequoit, N. Y.—Pursell & Cragg Co. has been incorporated to do a general florists' business, with $8,000 capital stock. The incorporators are Frank A. Pursell, of Rochester, Joseph W. Cragg and others.

Clintonville, O.—Conklin Bros., who have grown lettuce, cucumbers and tomatoes under glass for a number of years, have concluded to put a part of their establishment in cut flowers for the approaching season.

Lynn, Mass.—E. F. Dwyer & Sons had a large display of choice peonies at the exhibition held by the Houghton Horticultural Society in the lecture room of the public library, Saturday afternoon and evening, June 26.

Phoebus, Va.—Mrs. Carrie M. Terry, who now has a greenhouse and flower store here, twenty-five years ago was in business at 22 Avenue A, New York city. She says the business has advanced a thousand per cent since then.

Franklin, Pa.—The Bell Floral Co. recently went to Oil City to put up one of the largest wedding decorations ever required there. It included the decoration of Christ church and the large residence of Samuel Y. Ramage. The decoration received a half column notice in the Oil City Derrick.

Chillicothe, Mo.—A recent storm destroyed the large smokestack at the greenhouses of R. L. Isherwood and he intends to build another of brick. He also suffered a loss of $150 by broken glass. He has had a splendid business this season. Besides his greenhouses, he owns nine acres of land.

Akron, O.—Trade here seems to have been good this season. There has been a great deal of complaint about the water furnished by the city waterworks. There is something in it that is injurious to plants; it seems to stunt the growth and injure the foliage. There has been quite a loss among those using city water.

Memphis, Tenn.—The Buseck Floral Co. has been incorporated, with a capital stock of $25,000. The incorporators are J. W. Proudfit, W. E. Gage, W. M. Ball, J. Goldsmith, L. N. Starke, W. B. McLean, W. E. Pipkin and Otto Buseck.

St. Paul, Minn.—There were 227 entries at the rose and peony show of the exhibition of the Minnesota Floral Society June 25 and 26. Most of the stock came from amateurs, but the Jewell Nursery Co., Lake City, and other trade growers were represented.

Kearney, Neb.—Outdoor roses here are suffering more than usual from the depredations of the rose bug, which is literally eating up the buds and flowers. H. L. Hunt, of the Kearney Floral Co., has been kindly giving suggestions to the public as to the extermination of the pest.

Fremont, Neb.—C. H. Green has completed the work of tearing down the old greenhouses and has begun the erection of the new ones. Larger ones will be put up, with modern devices for heating and ventilating. When completed there will be 28,000 square feet of glass, an increase of about 10,000 square feet over what was in the old buildings.
